# BRIEFS

### **PESTICIDE GUIDE PUBLISHED**

FRESNO, Calif. - The Users Reference Guide to Pesticides, aimed at agricultural and horticultural users, has been released by Thomson Publications. The 200-page book lists products registered in the United States by generic name, followed by different formulations with their tank-mix, adjuvant and compatibility recommendations. It is available from Thomson at P.O. Box 9335, Fresno, Calif. 93791; telephone

### ASHS ELECTS CLEMSON'S KELLY

CLEMSON, S.C. - The head of Clemson University's Horticulture Department has been chosen research vice president-elect for the American Society for Horticultural Science. Dr. John Kelly was elected by the ASHS membership for his outstanding leadership, involvement in the ASHS and professional accomplishments. He will begin his term in July 1995. Kelly has been a professor at Clemson for nine years and department head since in 1991. He also is director of the South Carolina Botanical Garden.

### **TESTS CONFIRM TURF COVERS HELP**

Turf development research conducted at Texas A&M University is the subject of a new report from Contech Construction Products Inc. Results of the studies confirm that sensitive turfgrasses can be readily protected

against winter elements. One of the objectives of theresearch conducted

by Dr. M.C.

Engelke, associate professor of turfgrass breeding, was to reduce winter dormancy for the emergence of healthier turf after winter seasons. Free copies of the report are available from Contech, Dept. GICH-102, 33 Greenwood Lane, Springboro, Ohio 45066; telephone 800-338-1122 (in Ohio, 800-752-8899).

### SOD HOTLINE INSTALLED

Turf Resource Center, a toll-free telephone service, now is available to the American Sod Producers Association's office. The phone (1-800-405-TURF) emphasizes ASPA's developing public relations and education program. Organizations, publications and individuals will be able to obtain listings of sod producers in their area of interest, tips on sodding, and information for possible articles or other facts related to the sod industry specifically, or turfgrass generally. **GOLF COURSE NEWS** 

# Winter kill serves spring wake-up call to mid-Atlantic Coast supers

### By DIANE MILLER

In the wake of the most severe winter since 1977-78, golf course superintendents from Maryland to New York are reporting the loss of as much as 30 percent of their turf on greens and up to 70 percent on fairways, and some may not open until "well into May."

The blanket of ice and snow that kept area courses closed for as long as two to three months prevents gas exchange around the glass plants, in effect smothering the plant. Superintendents are discovering that under the layers of ice the turf is rotting and black in some areas, giving off a powerful stench once the ice is removed.

Winter injury, including extensive winter kill of poa annua and perennial ryegrass, extends from Baltimore and Washington, D.C., through the Philadelphia area, central and northern New Jersey, and into the Pocono Mountains, according to the U.S. Golf Association Green Section. Much heavier than normal snow mold damage is being reported through Ohio and Kentucky.

More than 200 golf course superintendents, assistants, greens chairmen, club officials, and course owners from the New Jersey/Philadelphia area met on March 28 at Tavistock Country Club in Haddonfield, N.J., to discuss the ramifications of the severe damage.

The joint meeting of the Golf Course Superintendents Association of New Jersey (GCSANJ) and the Philadelphia Association of Golf Course Superintendents (PAGCS) opened the line of communication between superintendents, club officials and the USGA.

Jim Sklorusky, Northeast Region agronomist for the USGA, discussed previous years' damage from upstate New York and Montreal. David Oatis, director of the Green Section's Northeast Region, discussed communication with club membership and talked about what superintendents can expect during the Continued on page 20

## Judge: Golf balls belong to golfers

Golf balls driven into a lake belong to the original owner, according to a ruling by a judge in Vancouver, Canada.

The decision came in a case prompted by a youth who was retrieving balls

from a water hazard. He was accused of stealing the balls, but the judge ruled the balls belong to the golfers, not the course.

Mayfair Lakes Management Corp. maintains a contract with a scuba diving company to recover balls lost in its lake. These balls are valued at more than \$19,000 a year.

The course is considering requiring a waiver from golfers, who would relinquish ownership of balls lost in the lake.

## Fourth-grade students take 'teacher' Moore to school

## everyday help

cure, dealing with the clubs that want more but simply can't between spending time "on the road" and trying to find more

time to spend with the family. After nine years of dealing with these challenges, I have

decided the only means of survival (only 20 years to go) is to

Mount Pinatubo fallout

# Ashes to ashes, dust to dust at Clark AFB course

### By HAL PHILLIPS

ANGELES, The Philippines - When Mount Pinatubo blew its top here in October 1991, a layer of ash blanketed the 18 holes at nearby Clark Air Force Base, which soon closed its doors for good. In the frenzied retreat from lava and ash, the course suffered another indignity. It was looted: irrigation heads, cups, vardage markers, even door knobs were stolen.

Things have turned around at the site, as

a private corporation - Mondragon International Philippines Inc. - will refurbish the course to anchor a new destination resort. But the ash - which Filipinos call lahar - has created an agronomic poser for turf consultant Neil Noble and Honolulu-based architects

underneath, but there's a four-inch layer of ash on top of everything," said Noble, an Ohio State graduate who heads Honolulubased Environmental Turf Systems.

"The ash is real sandy because this bit fell so close to the actual volcano [about 15 miles]. From a water filtration standpoint, the eruption basically top-dressed the whole site.

"I tested the ash and came up with high levels of phosphorus, potassium and calcium," Noble continued, "which are Continued on page 21

# Humor, embarrassment a potent combination, Moore relates

### Continued from page 17

try to find a little humor in every situation. Nothing makes a bad day a little more bearable than getting someone to laugh with you — or even at you.

I have found that some of the funniest situations are those that make you cringe a little when you remember them. The combination of embarrassment and humor is a potent one. One of the best I can remember happening to me occurred early in my Green Section career. I had a couple of months on the staff under my belt and was starting to feel like perhaps I could do this job after all. Brimming with confidence (fragile as it was) I was making a TAS visit on a course in Nebraska. Along for the tour were the green committee, the golf professional, and the superintendent — the usual entourage.

Spouting one agronomic gem of wisdom after another, I lead the group through the course until we encountered a green with two, dark parallel lines crossing the surface. Having personally applied charcoal to many a hydraulic leak, I immediately diagnosed the injury. The superintendent laughed and the others on the visit frowned. I bent down to get a closer look and suddenly the lines moved just a bit. Power line shadows do that when the wind blows. We all had a great laugh but I will admit I have yet to make another visit to that course. I expect credibility may be the problem.

With this job, like most jobs, about the time you are having a few doubts about your ability, something happens to make you feel maybe you are doing some good after all. I recently traveled Dallas where one of the fellows on the visit felt the sand in the bunkers was bad because the ball would not hold the green when blasted out. Those of you familiar with my writing might remember I tend not to have a lot of sympathy with player complaints concerning the sand in the bunkers since they are, after all, a hazard.

However, this fellow was adamant that a requirement of bunker sand should be to allow players to impart backspin on the ball. To demonstrate this failing in the existing bunkers, he dropped a couple of balls and tried to blast out. After skulling a couple, he finally lofted one to the green and sure enough the ball rolled when it landed. Credibility thus restored, he challenged the pro to try a couple. The pro blasted away with all his shots landing on the green and rolling just a couple of feet. The player then reasoned the pro was not of average ability so he then handed the club to the superintendent. Now, I thought, is the time to cringe. Instead, the

ry stopped even quicker than the pro's. Well shoot, I might as well try to. Dropping a ball, I quickly

reviewed the Johnny Miller sand tips I read in 1971, opened the face, swung outside-in, and lucked out.

super blasted out two shots that

The ball actually hit and backed up. Case closed!

Unfortun-ately, there is a sequel to this story. A couple of weeks after this demon-stration of my

Jim Moore Was on a visit to a course in Mexico. The complaint this time was that the greens did not hold an approach shot — even with a wedge. Careful to pick an uphill lie, into the wind, and to a green that looked over watered, I decided once again to prove the complaining player wrong by embarrassing him with the fact that even a grass guy can hold the greens.

After shanking the first three shots and nearly hitting one of our group about 90 degrees off line, I gave up and tried to remind everyone I was there as an agronomist — not a player. Big cringe.

### DICKISON NAMED TO HALL

ATLANTIC CITY, N.J. — Upper Montclair Country Club superintendent Bob Dickison has been inducted into the New Jersey Turfgrass Hall of Fame by the New Jersey Turfgrass Association. The award is presented annually to a person to recognize their continuing lifetime commitment of dedication, serviced and achievemnts contributing to the advancement of the turfgrass industry in the state.

You Need Your Turf Seed Delivered On Time. And You Need It From Someone Who Can Answer Any Questions You May Have.

Don't you hate it when the sales rep doesn't know his grass from a hole in the ground? At Pennington, that's not the case. Pennington turf specialists are well-trained and knowledgeable about which grasses will best suit your turf requirements, water conditions, and climate. Not only that, they'll make sure that you get what you want when you want it. If it's Specialty Turfgrass that you need then it's Pennington Seed you need to call.

PERENNIAL RYEGRASSES - Pennington 240, Shining Star, Stallion Select, Morning Star, Sunrise 246 PERENNIAL RYEGRASS BLENDS & MIXTURES - Sunrise Primo, CBS II, Triple Play, Sunrise plus Poa Trivialis, Professional's Select, Fairway Classic, Sports Club Mix
