

## Toro introduces retrofit heads

The Irrigation Division of The Toro Co. has introduced the 780 Series conversion assembly. This product is designed to allow users to quickly and easily upgrade existing Toro sprinkler heads to the next generation in large turf sprinkler design.

The 780 conversion features adjustable part-circle (30 to 330 degrees) and full-circle models, arc adjustment from the top of the sprinkler to simplify installation, higher pop-up to clear tall grasses, color-coded threaded nozzles for ease of identification

and a stainless-steel riser to reduce riser scoring in high sand-content applications.

The 780 conversion assembly easily replaces the internal assembly while utilizing the existing sprinkler body — digging and changes to the piping system are not required.

For more information about the 780 Series conversion assembly, call 909/688-9221 or write to The Toro Company, Irrigation Division, P.O. Box 489, Riverside, Calif. 92502-0489.

## Par Aide introduces Divot Mate

Until now, golf course superintendents and their crew have been tied to the endless, time-consuming task of re-seeding divots on the course. With Par Aide's new Divot Mate, this chore can easily be entrusted to the players.

Designed as a sand 'n seed bucket, Divot Mates offer a variety of other course uses as well. Ruggedly constructed of durable polyethylene, the buckets boast a deep, 4-gal-

lon holding capacity with hinged lid to thwart the elements. A convenient broken tee container is positioned in the back, while mounting options add practicality to par-3s, driving ranges — or anywhere the course takes a beating.

For more information, contact Par Aide at 3565 Hoffman Road East, St. Paul, Minn. 55110. For the Par aide dealer nearest you, call 612-779-9851.

## Versatility the key to new Ultra Spilldeck

New, low profile, Ultra-SpillDeck allows users to custom design their own secondary containment storage pads.

Four (4) drum and two (2) drum modules are available which may be positioned to yield an unlimited number of shapes and configurations to meet specific needs. Modules are connected to each other with bulkhead fittings, allowing leaked materials to flow from one module to the next, thereby "borrowing" containment capacity from adjacent units. All-polyethylene modules are only 5.75" tall, offering safe and convenient loading and unloading of drums.

For more information, contact UltraTech International, Inc., 11711-2 Phillips Hwy., Jacksonville, Fla. 32256; or call 1-800-353-1611.

## Course Air Turbo new, improved

The Course Air Turbo II is new and improved, featuring its 20-cubic-foot hopper, break-away booms for safety, 16- or 20-foot boom spread, shorter tongue for easier turning, lighter-weight environmental shields, and a wider range of application rates — five to 500 pounds per acre of fertilizer, seed or dry pesticides.

The Course Air Turbo is the only available air flow machine designed to apply seed, fertilizer and dry pesticides with a stream of air for precise application, eliminating ballistic segregation. For more information, contact Course Air/ATA, Inc., P.O. Box 1114, Hurst, Texas 76053; or call 817-795-8853.

## Landa unveils new pressure washer

Landa, the manufacturer of pressure washers and steam cleaners, has introduced a new line of hot water pressure washers with vertical burners. The VHW (Vertical Hot Water) line has five models, including a VHW3-700 — 3 gallons/minute (GPM), 700 pounds/square inch (PSI) model with steam combination. All of the models, which range from 2 GPM and 1,000 PSI, to 4 GPM and 2,000 PSI, feature an oil-fired, vertical burner configuration with Landa's famous cold-wrapped Duracoil. This is Landa's first line of the vertical, or "stand-up" coils, patterned after similar low-cost pressure washers. For more information contact Crismon Lewis Landa, Inc., 13705 N.E. Airport Way, Portland, OR 97230; or call 1-800-547-8672, Ext. 175.
