Hawkins comment

Continued from page 11

should not be limited to wetlands and protected habitats, protected wildlife, protected or regulated waterways, archaeological or cultural resource sites and/or unique natural features or conditions.

A proper site assessment identifies those conditions that have regulatory and site-planning ramifications and should not include extensive or costly studies at this stage of the planning process. Gaining this level of understanding of the site, its potential limitations and regulatory requirements, the developer can make educated planning and permit requirement decisions while managing this level of financial risk.

If the golf course site can be legally permitted for the planned development in terms of zoning and land use regulations, and the site limitations or environmental sensitivities do not preclude development feasibility, the project can be approved.
