

## BRIEFS

## SOD BUYING NUMBERS UP

A recent Gallup poll revealed that at least 4.9 million households in the United States anticipate buying turfgrass sod this year. That is a 36-percent increase from 1996 and far outstrips the 1995 figure of 1.9 million. The survey also reported that in 1996 U.S. households purchased \$426.2 million in turfgrass sod — \$188.6 of which was professionally installed.

## JACOBSEN KEYNOTING FOR GCSAA

ANAHEIM, Calif. — PGA Tour veteran Peter Jacobsen will keynote the Opening Session, Feb. 4, of the 69th

Peter Jacobsen

International Golf Course Conference and Show here. The annual event, sponsored by the Golf Course Superintendents Association of America, will be held Feb. 2-8. Au-

thor of the book, *Buried Lies: True Tales and Tall Stories from the PGA Tour*, Jacobsen has won six Tour events, participated on the 1985 and 1995 U.S. Ryder Cup teams and was player director on the Tour policy board from 1983-85. He owns a golf course design company.

## IPM SEMINAR SCHEDULED

PHOENIX — The major concepts of a sound Integrated Pest Management program will be presented by Dr. Karl Danneberger of Ohio State University here Sept. 3. Presented by the Cactus and Pine Golf Course Superintendents Association and Golf Course Superintendents Association of America, the seminar will focus on managing turfgrass under environmental stress as well as pest management and pesticide resistance. Advanced registration is required. People may call 800-472-7878 for more information.

## GA. SETS FIELD DAY, TURF CONFERENCE

GRIFFIN, Ga. — Two Georgia turf events have been scheduled. Georgia's Turfgrass Field Day has been set for Aug. 27 here. It will feature tours of the research plots, discussions of turfgrass breeding and research and an exhibit area of turf equipment. Meanwhile, the Georgia Turfgrass Association's 28th annual Turfgrass Conference and Show will be held Dec. 9-11, emphasizing sports and commercial turf management, golf turf issues, turf breeding, landscape and ornamentals. For information, people should contact Douglas Moody at 770-975-4123.

## Walking the talk at Widow's Walk GC

Superintendent Jeff Carlson pushes all the environmental hot buttons — and wins

By MARK LESLIE

SCITUATE, Mass. — The Shakespearean student in him might look at this job as *A Midsummer Night's Dream*. The analyst in him might view it as an opportunity to fill a spreadsheet with figures. But the superintendent in Jeff Carlson views his position at Widow's Walk Golf Course here as "professionally satisfying," bringing

Jeff Carlson

"very high satisfaction as a golf course and grow-in superintendent and very, very high satisfaction when you add its restoration aspect."

The "restoration" to which Carlson refers is creating a living golf course from a "dead" piece of ground: a former gravel pit and dump site littered with cement blocks, old refrigerators and other assorted ugliness. The course, municipally owned Widow's Walk, has gained more public attention than almost any in the country because it will serve as a working laboratory to discover the impact of a golf course on wetlands, wildlife and habitat.

The Massachusetts Audubon Society and Scituate Conservation Commission have been heavily involved in this reclamation project.

No, this is not sod, which needs repair every couple of years. It's shag carpet.

## Used carpet for permanent 'sod-wall' bunkers? Good trade

By MARK LESLIE

SCITUATE, Mass. — Some inventions seem to be just laying around under a bush waiting to be discovered by an innovative mind. Such was the case of the "sodwall bunker kit in waiting" — Dr. Michael Hurdzan's answer to a standard, old-time stackwall bunker.

Fresh from a trip to Scotland, the home of sod-wall bunkers, Hurdzan was walking the property of what would become Widow's Walk Golf Course here — an abandoned gravel site. "He's walking along and finds this ugly carpet under a bush, and all kinds of light bulbs go off with him, and him alone," recalled Jeff

Carlson.

Voila! The idea of the "carpet-wall bunker" was born.

"Maybe this will change the face of American golf a little bit," Hurdzan said. "It will add spice to a linksy golf course."

"As an alternative to sod, I can't think of a better one," said Carlson. "It has the potential to really stay in the industry."

"You had to have the right client to try it," Hurdzan said. "This was the perfect opportunity because of the experimental side of the project. Now that it's done it will be a much easier sell."

"I think sodwall bunkers add such a distinct flavor to a golf course that you

## Talkin' Trash

Keeping control of golf course trash in a clean and efficient manner, is accomplished with this ramp up to a trash bin.

By TERRY BUCHEN

LAS VEGAS — One of the best ways to handle golf course maintenance trash is demonstrated at the new TPC at The Canyons here. The maintenance complex, guided by Kim Byran Wood, features a ramp as the key to collection.

Key to the system is an 8-inch-thick concrete ramp,

## Quick and easy clean-up at Canyons

with surrounding walls that are 12 inches thick — all with reinforcing rods (rebar), Wood said.

An overhead, colored decorative wall, which shields the employees' parking lot view of the trash re-

## Inroads in 'biologicals' research, Nelson reports

Dr. Eric Nelson has been an associate professor of plant pathology at Cornell University in Ithaca, N.Y. since 1993. He has done extensive work with biological controls to fight turfgrass diseases and his work has been extensively published.

He holds master's and doctorate degrees in plant pathology from Ohio State University.

Dr. Eric Nelson

**Golf Course News:** What type of work are you doing on biological controls?

**Eric Nelson:** We have two approaches. The first is the addition of organic amendments that provide a food source for beneficial microorganisms. The amendments enhance the microorganisms' activity and control pathogens. We've replaced peat moss with compost in top dressing and seen up to 90 percent disease control with the compost amendment. Most of the control has been in foliar pathogens such as dollar spot, brown patch and gray snow mold. We've also seen control of pythium root

See related story, page 1

rot, which is interesting because it isn't a foliar problem. We've tried all types of composts: animal manure, yard waste, industrial sludges. Poultry manures and some sludges have worked very well. Brewery sludges have been very effective, having a sustainable supply with predictable results.

The second approach is specialized microbial inoculants. That involves spraying bacteria, fungi or actinomycetes (bacteria that grow like fungus) on turf to control disease. We've

## Correspondence courses developed

Two turfgrass management correspondence courses have been developed by Dr. Keith Karnok of the University of Georgia's (UGA) Crop and Soil Sciences Department.

One course is patterned after the intermediate turfgrass management course taught by Karnok. The other, Principles of Turfgrass Management, was developed in

cooperation between UGA's Continuing Education and the Professional Lawn Care Association of America. The Golf Course Superintendents Association of America has reviewed both courses and will award three CEUs toward recertification for each course completed. More information is available from calling 800-325-2090 or 706-542-1756.

### IGM OPENS REGIONAL OFFICES

LAKELAND, Fla. — To improve the level of service to its southwest and central Florida golf course clients, International Golf Management, Inc. (IGM) has opened a pair of regional offices in Ft. Myers and Tavares. "Our regional offices will enable us to provide existing clients with a higher level of service and will be an asset in securing new business in the rapidly developing southwest and central Florida markets which we view as tremendous growth areas for our business," said Scott Zakany, vice president and general manager. Located at 1419 Courtney Dr., the Ft. Myers office houses John Carlin, Southwest Florida regional manager. The Tavares office, located at 1617 East Alfred St., houses Jim Wells, Central Florida regional manager.

## 'Carpet-wall' bunkers built

Continued from page 13

can't replace any other way. The problem is maintenance. They have to be replaced every three to five years. You can't get anybody in North America to do it. I'm sure that, early on, sodwall bunkers were common here because of the Scottish influence. But at some point they died out, probably because of maintenance factors."

After experimenting with 6-foot and then 3-foot lengths of carpet, Carlson settled on short pieces, which can be built into "a little curvy wall kind of like a brick wall."

The carpet is flexible and can be turned a bit like sod for rounded bunker faces, he said.

Between each layer of carpet Carlson's crews spread 1/4 to 1/2 inch of soil and then seeded it. "We wanted the grass to grow and fill in. The seed buries its roots into the next carpet and gives it some structure."

Carlson recommended carpet that is not quite deep-pile shag, because it has to have body. Earth-tone colors like brown, beige and green are good, he

*It's labor-intensive to build, but it is to build a stackwall bunker, too.*

*And these will never have to be rebuilt.'*

Jeff Carlson

said, because it tends more quickly to look like dirt quicker.

"Superintendents, given this idea, will fine-tune it and make it even better," he said. "It's labor-intensive to build, but it is to build a stackwall bunker, too. And these will never have to be rebuilt."

Meanwhile, a local carpet installer gleefully dropped off his carpet remnants for Carlson initially. "Now I'm getting carpet from everywhere."

...

Hurdzan acknowledged that he for years had searched for ways to build cost-effective sodwall bunkers.

"I've tried all sorts of things to built them: zoysia, old grass, young grass, stuff with a lot of thatch, painting the sod with lacquer so it wouldn't decay, things to try to slow down the decay of bacterium," he said. "But I concluded that organic matter decays, and so I've tried to come up with an inorganic source."

"I thought the conveyor belt might be the way to go, but it's hard to find and really might not have quite that look. I thought of old fire hose. Then I saw this carpet, and I thought there is carpet everywhere and it will last forever. I'd love to use it in future courses."

GOLF COURSE NEWS

# PRIME YOUR SOIL FOR OVERSEEDING SUCCESS

Overseeding is a significant part of your turf management program. Applying Primer 604® prior to overseeding supplies optimum moisture and nutrient levels to germinating seed and young grass seedlings during the early stages of growth and establishment. Primer 604 also controls dry spots and helps drain wet soils where seeds have trouble germinating.

**Maintain a uniform soil moisture environment with:**

- Promotes Uniform Movement of Water
- Promotes Uniform Distribution of Water
- Promotes Availability of Water and Water Soluble Nutrients
