

STRAIGHT FROM THE UNDERGROUND

Wireless Soil Monitoring 24/7

Knowledge is power. But you can't expect a weather station to tell you what's happening under ground. Now with RZ Wireless, you will know the precise levels of moisture, temperature and salinity in your rootzone 24/7, so you can micro-manage your water better than ever before.

Take water management to a whole new level.

- Moisture, temperature and salinity data transmits real time to your personal computer and is available online at a secure site, 24/7
- Patented technology provides improved precision and reliability
- Easy to install with only a cup cutter anywhere on the course

If you are considering the use of wireless soil monitoring systems, here's something you need to know. A recently acquired license under a key U.S. patent (U.S. Patent No. 7,103,511) on wireless data transmission gives Advanced Sensor Technology exclusive rights in the field of commercial soil monitoring systems under that patent.

WARNING – Because companies without permission cannot legally sell or use wireless soil sensing equipment using this essential patented technology, using a wireless soil sensing technology other than RZ-Wireless is likely infringing on this key patent.
