

Now Cure

Brown-Patch

.. almost overnight!

BROWN-PATCH, the bane of all greenskeepers, and the stumbling block to many a par score, need no longer be accepted as a necessary evil.

NOW, you can cure Brown-Patch almost as quickly as it sets in. You can even prevent its appearance throughout the entire season.

THE SECRET is USPULUN NU-GREEN. Never before has there been an effective and reliable Brown-Patch remedy. It will positively cure this dreaded disease in from three to five days—or prevent its appearance in the most humid weather.

NO DANGER of burning the grass. No application of fertilizer needed after using USPULUN NU-GREEN. Leading golf clubs are enthusiastic over this new treatment.

YOU, TOO, will be amazed at the results—and proud of the appearance and perfect condition of your greens—if you treat them with USPULUN NU-GREEN.

USPULUN NU-GREEN

few odd dollars in lieu of the thousands which they owe.

Have these men ever pondered over this course before taking the plunge? I am certain they can't have thought too hard. They are well known to hundreds, nay, even thousands. They have brought discredit not only to themselves but have assisted materially in lowering the prestige of the club which they have the honor to serve. And with the manufacturer they have succeeded in arranging things that business is entirely cut off or on a strictly cash basis.

Greater harm, however, is that of a moral nature. Pros of this questionable type forget they belong to a large and noble profession. The eyes of the country are concentrated on this body all the year round. Acting as some do, they drag the entire profession down with them.

Ant Treatment

You understand as well as anyone, if you happen to have been unfortunate enough to have been pestered with ants, just what a nuisance they can be. They mostly do their work in the summer time when it is very difficult to grow grasses. They continually bring dirt out of the ground and it seems to burn up the surface where the ant hills form. In a number of cases where I have constructed courses, upon going down into the ground we have found ant beds 6 feet in diameter and about 18 inches deep. I don't know why we came across all these ants, whose numbers ran into millions, unless some time in the past there had been some dead animal buried there. That is one reason why I have never been of the opinion that bone-meal is very good for putting greens, although it has bacteria that is absolutely essential to plant life, but on account of the nuisance it is very apt to give the user, I do not highly recommend bone-meal where other fertilizers could be substituted. To exterminate ants a very simple mixture of powdered borax and sugar can be used.

For ant-hills about two inches in diameter put on some of the mixture, about as much as could be laid on the nail of the little finger. Put on each ant-hill in proportion to the size. This sounds like a very simple remedy, but for some unknown reason the ants disappear; where they go to is a mystery. The only thing we do know is that it gets results.
