NEW "FAIRWAY" TRACTOR

Chicago, Ill.—"The McCormick-Deering Fairway tractor is a practical all-purpose power plant for golf course construction and maintenance," reads its maker's statement, which continues: "It satisfactorily meets all requirements for fairway maintenance, for mowing the rough, and for construction and improvement work. It is easily controlled and turns in a circle with an 8-ft. radius. It works in close corners, turns quickly, cuts close to obstacles and

out again, leaving a surprisingly small amount to be done with hand labor. A flexible 7-foot mower, the power for the operation of which is taken directly from the tractor engine by means of the power take-off, has been designed for use with this tractor. With this mower and a trailer mower one man can mow 75 to 100 acres a day.

"In addition to supplying power for maintaining the course, it pulls rollers, compost distributors, and dump wagons uphill and down, over smooth going or rough. The Fairway can be shifted immediately to the jobs of plowing, disking, harrowing, seeding and distributing fertilizer. It can be used in construction and improvement work, for removing dirt, materials and equipment, and when necessary the Fairway will operate equipment on the belt or power take-off as efficiently as any other type of tractor of equal capacity.

"The Fairway has the same practical type of power plant as the other well-known McCormick-Deering tractors. Its rugged, vibration-free, four-cylinder engine is economical in operation and sup-

plies an abundance of smooth, dependable power. The rear wheels of the Fairway are equipped with 16-inch tires, which make of the tractor itself a roller. The tires of the front wheels are 8 inches wide. The wheels do not track."

NIEBLO OFFERS TEE-VENDING MACHINE

New York.—After testing the practicability of the plan since 1927, announcement is made by Nieblo Mfg. Co., makers of the Reddy Tee, that they can supply professionals and course owners with vending machines that will dispense two dozen boxes of tees at a filling. By installing these machines, constant interruption of the pro as he goes about his work (for a purely mechanical sale) is eliminated. The device appeals to players as well, since they are not forced to wait for the attention of the pro, who may be busy with another member, to make their purchase.

According to Nieblo, sales are actually increased by use of these vending machines. In proof they point out the increased volume of tee sales enjoyed last season by Jack Hagen, pro at the Salisbury (Long Island) Links, where 50 per cent more tees were sold in 1928 than in the previous year. Hagen attributes this increase to the conveniently located battery of three machines at the first tee. The only attention necessary is occasional refilling as the machines are emptied. When it is realized that one filling brings in \$6.00 in quarters, the possibilities of good income and a respectable annual profit are apparent.

The machines are expected to prove of particular value around public and daily-fee courses, where there is no conveniently located pro-shop in connection.

NEW LARK SPRINKLER IDEAS

Peoria, Ill.—The L. R. Nelson Mfg. Co. has made some improvements in its well-known Lark Golf Sprinkler, among them being the rotor valve which controls the speed of the whirling rotor, allowing a coarse or fine spray. It saves all adjusting of the rotor arm and by partly closing the valve, the whirling of the rotor is cut

KEMP POWER SOIL SHREDDERS

Before Seeding Enrich the Soil

A soil needs more than fertilizers to prepare it for growing a thick, velvety turf. It especially needs a liberal application of Hyper-Humus. This natural soil builder increases the moisture-holding power and improves the soil texture. It forms a medium in which beneficial soil bacteria can multiply. Makes a natural home for the grass roots.

down to any speed desired, and removes all danger of excessive wear on high pressures.

Another improvement is the self-flushing sediment screen which prevents clogging of the spray cap on the end of the whirling arm. This screen, located in a central body casting where the rotor arm is attached, projects slightly into the water-way of the main stream and is kept clean by the flow of the main stream.

WILLIE HOARE WITH WILSON

Chicago, Ill.—Willie Hoare, for more than a quarter century active in American professional golf, has gone with the Wilson-Western Sporting Goods Co. to take charge of Wilson's pro golf department with headquarters at 37 S. Wabash Ave., Chicago.

Willie Hoare

For the last eight years Willie has been at Tedesco C. C., Swampscott, Mass., in the summer, and for the last decade he has been at Ho Springs (Ark.) C. C. in the winter. He is widely known in pro ranks and has had a well-balanced and successful experience, both of these qualifications making him a prize addition to the Wilson corps.

Willie came out from England when he was nineteen and ever since has been in close contact with the personnel and business developments in professional golf.

SPRING DEVICE ON WASHER

Watertown, Wis.—A substantial clock spring is now supplied attached to the brushes of Lewis washers, the necessity for this change being occasioned by the neglect to turn up on the four brass adjustment screws in the brushes of the original washer.

In order to determine whether or not the spring would operate indefinitely, a reciprocating mechanism was attached to a Lewis golf ball washer plunger moving up and down for a million strokes, representing on the average a year's use. Tests were made from time to time by marking a ball with ink to determine whether or not the springs and brush bristles were still functioning and it was found that the brushes cleaned as well on the millionth stroke as on the first stroke.

GRAPHIC ISSUES FINE MANUAL

Park Ridge, Ill.—The handicapping committee of a golf club could not buy in any book store a finer treatise on handicapping than the booklet now being distributed free of charge to interested club officials by the Graphic Score Book Co., makers and distributors of "Graphic" handicap cards, racks and score cards.

The book not only gives full descriptions of the company's products and points out ways they can be used to best advantage, but it also contains a number of articles describing all accepted systems of handicapping and their relative value and fairness. There are many charts, statistical tables and hints to aid the club committee in its work.

"PEG" TEE NOW MADE IN U. S.

Keene, N. H.—The "Peg" celluloid tee is now made in the United States by the Granby Mfg. Co. Though enjoying good sales abroad, the "Peg" makers state they got away to a late start last year, and as celluloid requires some months to season, were not able to meet the heavy demand for their tee with a properly finished article. This year they have doubled their production and report big advance sales.
