		General Orders for Greenkeeping Staff—By C. H. L. Knuth.....	71

6. Carry a knife and remove individual weeds, as dandelions, and plantains, when first seen.

7. Report weedy conditions, presence of worms or ants, and any general defect that may be observed, when first noticed.

8. Wash off mower with hose on return to barn.

Bunkers:

1. Rake sand in traps by drawing from the center to the sides and pull the sand well up onto the turf.

2. Report if you think grass on mounds is too long, as after a soaking rain it might grow so fast as to escape the greenkeeper's notice.

Tractor Mower Operators:

1. Do not alter adjustment on gang mowers, but report to Greenkeeper or Engineer if the units do not appear to be working right.

2. Go over the tractor thoroughly every day to see that all oil and grease cups are free and lubricating properly.

3. Replenish gas, oil and water before putting tractor away at night.

4. Report to Greenkeeper if engine is not functioning properly.

5. Maximum speed 4 to 5 M. P. H.

—C. H. L. Knuth in *Canadian Golfer*.

GOLFDOM welcomes letters of suggestion and experiences from greenkeepers and professionals.
