

## The Big Reddy Tee Campaign is on!

Right now, at what may be properly termed the "tee-buying" season, the name REDDY is being flashed to millions. REDDY! REDDY! REDDY! Over and over again—broadcast throughout the land. Pros and dealers are feeling this push in the way of extra profits—profits they would not enjoy if this Company had not originated the Reddy Tee.

All leading jobbers carry Reddy Tees. Check up on your REDDY TEE supply now and fill in the open spaces. The Nieblo Mfg. Co., Inc., 38 East 23rd St., New York City, Executive Offices.

### ANIMAL AND BIRD DANGER OF ARSENATING

Sir:

A frequent question asked by property owners hereabouts, who are contemplating the grub-proofing of their lawns, is as to the possibility of birds, cats, dogs, etc., being poisoned by eating some of the arsenate in one way or another.

Have you any information or ideas on this phase of the effects of the use of arsenate of lead?

M. E. F.

(Pennsylvania.)

### Answer

Sir:

Would advise that we have had no kicks or law suits to date from birds, cats or dogs being poisoned from browsing on the

Pyratone Sheath, weighing less than 1/2 ounce, is a live, flexible tubing telescoped onto a steel shaft. This sheath replaces old finishing methods of painting, enameling, oxidizing and nickel plating. Pyratorne is indestructible. It will not crack or wear off. It is obtainable in any color or finish. "Pyratorne Sheaths" are equipped on Walter Hagen clubs, Spalding clubs and others.

soil of arsenated turf. I don't think there is much danger as regards dogs or cats. Poultry had best be barred from turf so treated while birds such as robins, etc., are an open question. Personally I believe that these latter birds stick their bills into turf only in pursuit of grubs and worms. If the grub and worm population is low as a result of the arsenate the bird question should pretty well take care of itself.

### Acid Phosphate of Small Value in Correcting Soil Acidity

Sir:

Our greens, composed of poa annua and bent, ranging from solid poa annua to solid bent, on a heavy clay soil, have a high degree of acidity. Some are acidity of 4.7.

What, in your opinion, should be used to lessen the degree of acidity? Could acid phosphate be used? What are its advantages or disadvantages in comparison with lime?

J. G.

(New Jersey.)

### Answer

Sir:

If you desire to decrease the acidity of your greens you can gradually accomplish this result by the continued use of lime, preferably ground limestone, in the top dressing, say five pounds of lime per thousand square feet of turf with each application of top dressing.

Acid phosphate is of little value as regards its ability to correct a soil acidity.
