

larger areas are covered. It is not difficult to tell this disease because of the cobwebby growth that appears above the patches. The patches are usually seen in streaks across the green. Pythium kills the leaves, stems and roots of the grass, so that when it does occur it is more serious than any of the other diseases.

Experimental work has been carried on for two summers in connection with zonote leaf spot and pythium. Some favorable results have shown up in the control of zonote leaf spot, Mr. Dahl states, but as yet no definite results have been worked out for either of these two diseases.

THOMPSON INTRODUCES NEW COMPOST SPREADER

Ypsilanti, Mich.—O. E. Thompson & Sons is presenting a new compost spreader to the golf field. The hopper holds 6 cu. ft. of material. The tires are 4 in. wide and convex to prevent injury to greens. Both wheels drive as the spreader is pushed while spreading. Each wheel has a ratchet type drive that disengages automatically for reversing and turning. The spreader, which is adjustable, has a scatter board beneath the discharge openings.

A new patented spreading principle giving a force feed is a feature of the device. The weight of the material in the hopper is carried by a baffle plate so the spreading mechanism turns easily.

PARK RIDGE C. C. has a pigeon-hole arrangement for separating the mail of each department head and committee executive. This simple, but rare, detail of clubhouse equipment assures each man getting the correspondence intended for him.

CHECK

the buyers guide on page 105 when in the market for any sort of clubhouse, greens or pro-shop supplies. We will ask manufacturers to send you literature and prices.
