

COURSE WORK

All photographs and

- 1—Ridding fairway of plantain with sodium arsenite dry method (Milarsenite), in Philadelphia district.
- 2—Home-made brush harrow, in use at Waterbury, Conn., municipal course.
- 3—Localized drying along edge of green—aggravated by tree roots. Deep forking, followed by drenching with water, needed.
- 4—Discolored bent from close cutting in hot weather. This course enlarged greens putting surface, by closer cutting of adjoining apron, at wrong season.
- 5—Skunks disfigure turf in search for grubs.
- 6—Closeup of injured fairway turf at New England club showing May beetle grubs.
