

course is out of play for two or three months there would be little advantage in sodding over sprigging or stolonizing.

Q. Please advise how to kill or remove chickweed in our greens. (Mich.)

A. Arsenate of lead probably is your safest material for eliminating chickweed from your greens. During hot weather apply no more than 5 lbs to 1,000 sq. ft. The chickweed will be hit harder if the plants are damp so that the arsenate powder will cling to the leaves.

In the fall, when cool weather starts, you can apply safely 10 lbs. to 1,000 sq. ft. mixed with a little topdressing to act as a carrier. If some patches are particularly stubborn, rub some lead arsenate directly into the weed. Wear a rubber glove when doing this.

Do not expect the chickweed to go out overnight. It will be a slow, gradual process. Yearly applications should be made until it disappears.

Q. I am building greens at X X X Club in Virginia. I would like to know more about the new grasses being developed for the South. I am familiar with the bent now growing at Winston Salem. I would like more information on bents. Some bents seem to stand up better than others. I wonder if you know which is the better. I am putting in some Tifgreen. I would like to know if there is any special

**America's
Most
Convenient
Golf Bag Cart**

TONY KART

A complete, compact, lightweight, low-cost combination bag and cart featuring aluminum and vinyl construction; zippered hood to protect clubs; 14" or 12" wire wheels for better balance and easier rolling.

Model 100 With 14" Wire Wheels

Carry it like luggage—by its handle.

Unconditionally guaranteed for one year in three models priced at \$32.95, \$37.95 and \$42.95.
