

# SAVE CLUB HOUSE FLOORS

## WITH SPIKE-RESISTANT PNEU-MAT RUNNERS

Protect your floors from spike holes with rugged Pneu-Mat Runners. Absolutely spike-resistant, they provide a comfortable walking surface—improve the appearance of your club house.

Woven of rubber-impregnated fabric, Pneu-Mat Runners are tougher than rubber runners. Reversible for double wear.

**Money Back Trial Offer:** Order a trial section. Test it on an area which gets especially hard wear. Money back if not satisfied.

### STANDARD WIDTHS

20" - 24" - 30"  
36" - 42" - 48"

### Trial Section

24" x 60"  
\$12.50 postpaid

and approaches. It may not take water too well so keep it dry as you can. We believe the best way of establishing it will be to lay solid sod from the nursery. It shouldn't be a pest in the greens because it looks so very much like bent. The ball probably will play well onto and from a Ugandagrass collar.

### Permanent Seed

**Q.** What is a good, permanent seed that will hold up under drought, etc., for this region? I don't want any "quikie seed." (Md.)

**A.** A seed that will give you a sturdy, drought-resistant turf in the Mid-Atlantic region is Kentucky 31 fescue. This will cover a variety of purposes from lawns on sub-soil to play-grounds, athletic fields, roughs on golf courses, highways, airfields and many other purposes. It is not the kind of seed that you would choose for a small, extra specially good lawn. It is a good rugged, permanent grass that will hold up under drought. It will come in fairly quickly but it is permanent. It will thrive best under a soil that is approximately pH 6.5 to 6.7, adequately supplied with nutrients, especially nitrogen and mowed at a height of about 2 inches. If clippings are not to be removed, mow frequently enough so that the clippings are so short they will disappear into the grass.

### Low Spots in Greens

**Q.** We are writing to you concerning the leveling up of low places in our bent greens. Greens are about 4-years old and over this period several low spots have developed in each green. Our greens were constructed by laying down a bed of crushed limestone, approximately 3in- to 4in-size, and covering this with a layer of soil. They are so constructed that they are 12in- to 30in. above fairway level and are well drained.

We have tried to level the low spots by using topdressing but have failed to bring them back to green level. Something probably was not done correctly when constructing the greens which caused the low places. But that is past history and our problem now is how to correct this condition. (Ky.)

**A.** It would seem that the soil ran into the large limestone rock and left a cavity which then caused a depression. The easiest way to correct the low spots is to remove the sod and fill the depressions, then re-lay the sod. With modern power sod cutters this can be done quickly and neatly. Be sure to probe the depressions deeply and tamped the new soil to insure no further settling.

I suggest using a fill soil just a bit sandier than that now in the green. Mix it with the top

## ECONOMY Double Gear TRAVELING SPRINKLER

Designed specifically for large-area watering. Slow, continuous movement of the sprinkler head around the base distributes the water evenly and eliminates excessive run-off. Popular with managers of fine turf everywhere.
