

Tom Walsh

... call him doctor

Chicago Women's College Awards L.L.D. Degree to Tom Walsh

Thomas J. Walsh, onetime president of the PGA and long active in its activities on a local, sectional and national scale, became, as far as is known, the first professional in the U. S. to receive an honorary doctor of law degree, when St. Xavier College in Chicago awarded him an L.L.D. in August.

Tom was recognized by the women's college for his tireless fund raising activity in its behalf over the last 10 years. The degree was presented by Sister Mary Joesetta, R.S.M., pres. of the college, at a commencement ceremony.

A member of a well known golfing family, Walsh has been connected with the game for more than 50 years. He started as a caddie and then progressed to professional and finally became a club builder and owner. He built Westgate Valley CC, on Chicago's southside, about 30 years ago and has been associated with that club ever since. He also is a part owner of Hickory Hills in Chicago.

AUGUSTINE ASCENDING ELM THE GROWTH PATTERN makes it AN IDEAL TREE for GOLF COURSES

Hundreds of Clubs have had outstanding success when planting for specific purpose:

*Traffic control . . . to define fairways and encourage golfers to play in their own fairways

*Definition of greens

*Shade

*Beautification of the course

CONVENIENCE: A magnificent tree whose columnar shape tends to minimize the difficulties of making shots under or around it. Non-surface rooting habit permits grass to grow freely right to trunk base. This elm is practically seedless which prevents springtime litter. Little pruning is required. Transplanting can be done easily and without setback.

BEAUTY: Majestic, vertical form is distinctively architectural. Large-leaved, rich green foliage provides ample shade, but the tree's unique structure promotes a thick lawn beneath by permitting the sun to reach the grass more hours per day.

STRENGTH: Upslanted branches sturdily withstand wind and weather; deep, down-growing roots provide firm anchorage; vigorous resistance to fungus or virus disease and to drought encourages healthy growth.

ADAPTABILITY: Compact yet graceful contour, and dependable uniformity make the Augustine Ascending Elm ideal for matched landscaping effects as well as for stately specimen plantings. Narrow, upright shape permits close planting for windbreaks or enclosures, as well as practical for lining fairways and setting off greens.

RAPID GROWTH: Just 5 years from sapling to tree. Liners, as well, ready now.
