## DESIGN

Continued from page 106

was chosen adjacent to the first tee (clearly visible from the control desk), the 18th green, the ninth green and the first tee and ninth green of the nine-hole course. The structure is an independent steel frame. The exterior walls are glass set in aluminum frames and common brick painted white. Functionally the building is designed so that golfers enter it from the golf course side and the non-golfing public from the covered driveway. The golfers' grill overlooks the course and specifically the first tee.

The kitchen set at the center of the building services the golfers' grill, the formal dining room and the banquet areas.

A center area with a 15 foot ceiling height contains a bar. This center lounge is the point of entry for both golfers and non-golfers. Thus what is the entry area is also a bar and a lounge. The dining room, the golfers' grill and the banquet rooms all interconnect for multi use. The basement contains a theater, preparation kitchen, storage, and heating and cooling equipment.

Although the plan and design of Old Orchard were the result of the particular needs of the club and the site, they illustrate in a concrete instance the concepts of EBB design. This clubhouse has proved highly efficient and successful. The food and liquor sales have approached close to a million dollars annually and the green fees charged are the highest in the Chicago area. The success of this clubhouse is clearly the result of good management having a physical plant which can be adapted to changing needs.

The architect can make a significant contribution not only in providing an aesthetic environment but in planning for efficient utilization of space. •

### GOT A BIG IDEA FOR '66?

GOLFDOM is looking for new ideas for doing key jobs easier and better around the golf club. We'll pay \$20 for each one published. 150 words or less. GOLFDOM, 800 Second Ave., New York, N. Y. 10017.
