GRAU'S ANSWERS

continued from page 100

you know how much of each kind of nitrogen is in the bag? "Organic" can mean 1) soluble urea, 2) natural organics (sludge, tankage), 3) ureaform.

Remember, potash helps to develop firm turf that resists wear and traffic and that is resistant to diseases. Potash aids in translocation of food in the plant. Where sulfur may be in short supply (and S is a plant nutrient) consider using sulfate of potash. For each 10 pounds of nitrogen it is a good practice to supply four to five pounds of potash.

Have you checked the phosphorus levels in your soils recently? High phosphorus favors *Poa Annua*, reduces effectiveness of arsenicals. Seedling turf needs ample P; mature turf does well on much lower levels. ●

Toro Goes International

Toro Manufacturing Corp., Minneapolis, Minnesota, held its first international distributors conference in Lugano, Switzerland. The theme of the conference was "selling the complete line".
