RIDING TRENCHER

Compact unit digs to five feet

Ditch Witch has introduced the Model 1810, a compact riding trencher that falls in a category between handlebar machines

and 18-hp-class trenchers. It offers the compactness of a handlebar and the convenience of a riding trencher. A hydraulic backfill blade is available as an option.

The 1810 is built on a rigid one-piece frame. It has hydrostatic ground drive to all four wheels. It has 20,000-pound-test digging chain and will dig trenches to depths of 5 feet and to widths of 12 inches (at depths to 2 feet).

SOIL SAMPLING TUBES

Backsaver eliminates bending over

The Backsaver Handle and JMC Sampling Tubes were developed by Jim Clements, formerly a Soil Scientist with the USDA, who saw the need for a safer and better method of taking soil samples.

There are several sampling tube sizes and tip combinations available to obtain an undisturbed sample under moist soil conditions. A new Moisture Meter Tube removes a core leaving a hole the exact size needed for implanting moisture sensing devices.

TRUeline STRIPER

Features 7-gallon tank, CO₂ pressure

The 110 TrueLine striper, with 7-gal. paint tank and CO₂ pressure holds paint to stripe 2800 linear feet or 121 parking spaces, and the CO₂ pressure

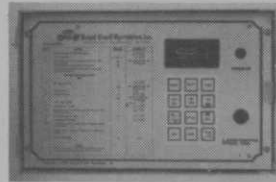

tank supplies the pressure to run a stripe four inches wide almost 8 miles enough to mark a football field several times, a half-mile track with 8 lanes twice, or more than 1800 parking spaces without refilling.

The paint and pressure tanks on all True-Line stripers are mounted on a welded steel chassis that rides on four ball-bearing wheels aligned at the factory for true, straight running.

COMPUTER CONTROLLER

Two offer push button programming

Royal Coach Sprinklers, Inc., Fresno, California announces the addition of two, new concept push button programming, micro computer controllers to their line of irrigation equipment. Both the model 31006, six stations, and model 34015, fifteen stations, are solid state

construction.

The controllers have one minute increment digital timing from 0 to 59 minutes for each station and an instant video recall of any part of the program at any time. Stations can be programmed, or skipped, individually for each day of a 14 day schedule. There are two repeat cycles per day. Controllers are enclosed in rain tight, vandal resistant heavy duty metal cases with key locks. Wall mount is standard but pedestal mount is available. A six day, six volt lantern battery is optional to protect the memory in case of power failure.

You could spend \$20,000 for a fork lift... or buy ours for \$349.00

In 5 minutes transform your bucket loader into a work-horse.

PATENT PENDING

If you already have a bucket loader, you could turn it into a versatile fork lift with C.C. Bucket Forks for under \$350.

You'll like what you get:

- Easy to handle—each fork weighs only 50 pounds
- Easy installation—attaches securely in less than five minutes
- Tough—handles up to 1½ tons—
- Easy to store and transport—tines are separate and flat with no bulky or awkward parts to lose.
- Universal size—fits almost all bucket loaders.

C.C. Bucket Forks are guaranteed to make golf course maintenance easier and more efficient. They're easy to attach and remove; fully adjustable to accept all kinds of material loads: convenient to store; light weight yet tough enough to handle 1½ tons.

MONEY BACK GUARANTEE C.C. Bucket Forks, Inc.

If you are not completely satisfied with the new C.C. Bucket Forks, simply return them to C.C. Bucket Forks, Inc., 520 West Grove Avenue, Orange, California 92665, within 30 days of purchase and your purchase price will be refunded in full.

We're so confident you'll find C.C. Bucket Forks to be a money-saving, useful tool, that we're offering an unusual Guarantee. If you're not completely satisfied for any reason, simply return them to our factory within 30 days for a full refund — no questions asked.
