

# Would You Buy “A Pig in a Poke?”

See This at the  
International  
Golf Show

MEMBERS of our laboratory staff will demonstrate how seeds are tested and analyzed in a model laboratory at our exhibit at the International Golf Show. You will find a visit interesting and profitable.

WHEN you invest money in seed for greens and fairways, without knowing exactly what it tests—its purity, vitality, weed seed content, etc.—you might as well be buying the proverbial “pig in a poke.”

When you buy, unknowingly perhaps, low-grade, weedy seed, you are buying trouble, delays, complaints and, most important of all, *labor*, the most expensive item in golf course upkeep. Poor seed piles up labor in patching, re-seeding, weeding and in a hundred other ways.

For your protection, the Albert Dickinson Company have established the most thorough and complete commercial seed testing laboratories in the world, so that we *and you* can know exactly the analysis of every lot of seed you sow.

## THE ALBERT DICKINSON COMPANY

*Largest importers, refiners and dealers  
in grass seeds in the world.*
