

Views of the germinating room (to left) and purity testing laboratory (to right) at the Chicago plant of the Albert Dickinson Company are shown above. These laboratories are open for your inspection.

**For Your Protection**

Dickinson's "Certificate" Brand Grass Seeds—all varieties—are sealed with a green and white certificate.

## How do you know?

When you buy grass seeds for putting green or fairway, how do you know that the seed you get and sow is of the right variety, that it will grow vigorously, that it is free from weed seeds which may later bring endless trouble and expense?

Yet these are matters of urgent importance to the greenskeeper who must spend thousands of dollars in grading, draining, fertilizing and fitting the soil to receive the seed and who may afterwards have to lay out thousands more to keep his greens free from weeds and in good playing condition.

## How you can know

With the naked eye, even the trained seed expert can tell only the approximate purity of a seed sample, and can tell little or nothing of its germinating power without making a careful laboratory test.

That is why the Albert Dickinson Company have established the finest commercial seed testing laboratories in America—so that they may definitely know and be able to tell their customers the exact quality of each lot of seed.

That is why Dickinson's "Certificate" Brand Golf Seeds are sealed with a certificate of test. When you specify "Certificate" brand, you know what you get.
