

This course closed to grubs and earthworms

Control grubs and earthworms . . . prevent infestation of your greens, tees, and fairways. Sherwin-Williams Arsenate of Lead turns the trick.

Sherwin-Williams Arsenate of Lead offers the surest, simplest method of grub-proofing turf. It is light, fluffy. Mixes well and assures complete coverage . . . possesses maximum killing power against grubs and earthworms.

It stimulates the growth of bent grass and other turfs. Not recommended for Poa Annua.

Leaves no ill effects, as it has no chemical reaction with sulfate of ammonia on the turf and becomes inert after losing its toxicity to grubs and earthworms.

*Send for free pamphlet giving full instructions
on grub and earthworm proofing*
