

NAGA this fall means a better course next spring

"Not a Grub Allowed"

This tested Sherwin-Williams turf protector controls grubs and earthworms. Use it on your greens, tees and fairways *this fall* when you close your course. This way you have added protection against these pests as well as added stimulus to Bent grass and turf growth. Naga also deters growth of many weeds.

Sherwin-Williams NAGA is 98% Arsenate of Lead—only 2% inert matter. And it is so light, fluffy and finely ground that 99.5% goes through a screen 350 mesh to the square inch. Grubs and earthworms are certain to get it. It is not too large for their mouthparts.

Mixes perfectly with Sulfate of Ammonia and other approved fertilizers but is not recommended for Poa Annua.

Send for pamphlet giving full instructions for grub and earthworm proofing.
