

The PENNSYLVANIA "New" Fairway Quint being pulled by the sturdy 6-cylinder PENNSYLVANIA Tractor.

It takes 5 efficient units to make an efficient Quint

Experienced greenkeepers know that a fairway gang mower cannot be any more efficient than its individual cutting units.

Every cutting blade of the PENNSYLVANIA "New" Fairway Quint or Trio is made of the finest crucible tool steel, oil-hardened and water-tempered. Each knife is given three separate grindings. Highest quality bearings throughout—either ball or roller, Alemite lubrication.

PENNSYLVANIA LAWN MOWER WORKS

1628 North 23rd Street, Philadelphia, Pa.

The Right Kind of Fairway Irrigation - - -

KEEP playing conditions uniform on your course with systematic application of water during the summer months. Give your members a chance to do consistent playing, with a 225-yard drive always a 225-yard drive. Make the course beautiful to the eye, soft and easy to the feet, and the despair of competitors.

Competent engineering of your water system will do it. Let our organization handle the job, and it will be done right the first time. Your members will be satisfied, your club turnover will be reduced, your prospective deficits will be eliminated through better patronage. Ask us how it can be done.

"Far Superior *for* Golf Courses"

"THE SQUARE-TURN FEATURE of the McCormick-Deering FAIRWAY makes it far superior to any other type of tractor for golf course work." This is the opinion of Mr. George Rudelius, greenskeeper of the Edgebrook Golf Course, Rockford, Ill., who has had nine years' experience with other types of tractors.

The FAIRWAY operates a five-gang mower on the fairways, and the special built-in 7-foot power mower on the rough. The ability of the latter to cut close to trees and shrubs appeals strongly to Mr. Rudelius. He also refers to the gratifyingly low fuel and oil consumption of the FAIRWAY.

The Edgebrook Course is operated by Edgebrook Subdivision. The FAIRWAY has many jobs around the development. It operates a saw; moves dirt and stones; plows, disks, and drags three acres of gardens; and it will handle a snow plow this winter.

Ask for information about the McCormick-Deering FAIRWAY at the nearest of 115 Company-owned branches and 42 distributors in the United States and Canada. Write us for catalog.

What Is Your Story?

What is your club doing that is advancing business operation of golf clubs? You must be doing something in membership solicitation, house operation, course maintenance or pro shop operation that is advanced and distinctive, or you have "just another golf club".

GOLFDOM will appreciate being tipped off to your story—a brief letter with just the salient facts will be sufficient. From this material exchanged in our columns by the progressive clubs there is bound to be a further elimination of lost motion and needless extravagance.

Will you co-operate?

GOLFDOM earnestly solicits letters from all club officials, department heads and manufacturers on methods, means and policies that are successful in course and clubhouse construction, operation and maintenance and on pro merchandising of goods and services.

Use GOLFDOM as the medium of exchange for ideas and as your aid in digging up facts that will promote business-like operation at your club.

We have no pets and no prejudices, but the determination to make each copy of GOLFDOM bring some specifically profitable idea to each reader.

Sound Economy Suggests

TONCAN (alloy) Iron Drain Pipe

NO sounder specification can be made for golf course drainage than TONCAN (alloy) Iron Perforated Drain Pipe.

TONCAN is highly refined iron, plus copper and molybdenum. Thus the corrosion resistance for which iron is famous is greatly increased by the addition of these beneficial elements.

Because it will far outlast ordinary drain pipe, TONCAN reduces golf course maintenance appreciably and assures a well-drained, playable course.

The Ideal Fall Fairway Fertilizer

Economical

Effective

Milorganite helped produce the excellent fairways at Interlachen and Beverly, scenes of the U. S. G. A. open and Western Amateur Championships in July. Furthermore, larger quantities of Milorganite are used on more fairways than any other fertilizer.

These clubs have not only simplified turf improvement on their fairways, but also subsequent maintenance of a dense heavy sod by using Milorganite. No other fertilizer possesses all these advantages.

1. Fall applications produce marked improvement before winter and benefits extend into the following season.
2. Its organic nitrogen is not subject to loss by leaching during the winter and early spring.
3. Milorganite has the lasting qualities of manure and promotes bacterial activity without introducing weeds or producing objectionable surfaces. It differs from the ordinary chemical fertilizers by supplying nitrogen over longer periods.
4. It is the easiest of all fertilizers to apply due to its exceptional granular condition.

We are prepared to help devise an economical and effective fairway fertilizer program.

Wholesale prices on above, or any other turf producing grasses or mixtures, on request.

COCOOS BENT is botanically known as *Agrostis maritima*, but all strains of *Agrostis maritima* are **not** Cocoos Bent.
We offer the **true Cocoos Bent**, the finest of the *Agrostis maritima* grasses, in sealed bags.
Per lb. \$2.50, per 10 lbs. \$22.50, per 100 lbs., \$200.00

Remember:—We are one of the largest direct contractors for foreign grown Grass Seeds in the United States. Over thirty years of Seed Service have enabled us to segregate those collectors of Bent Seeds who are reliable from those who are not; to single out those growers of Cheving's Fescue whose strains are pure; also to contract for true American-grown seeds of high vitality. All our seeds are botanically true to name and are cleaned and re-cleaned until brought up to the highest possible state of purity and germination, special care being given to the elimination of weed seeds.

seed √ √ √ or SEED?

If we were to wrap each single seed separately in a sanitary package and place a fancy label on each package . . . it would still be seed. The package might make you think it was different.

The point is this . . . most seed is similar in appearance. The big difference is demonstrated not in the package but in the results it gives after it is put in the ground.

For over sixty years the name of SCOTT has been the prefix to seeds that may look more or less similar to other seeds. But it is only because seed with that name has proved by uniformity of results in over 1,000 Golf Courses that the prefix becomes significant. If there is a difference in seed—therefore—it's between seed and SCOTT'S SEED. Sow it once and you'll have a much better idea of what we mean.
