

# FLETCHER GREEN ROLLER

**T**HE Fletcher Green Roller has been developed with one purpose in view, to produce a perfect roller for putting greens.

Due to its sectional construction (there being really four rolls in one) it turns very easily and does not slide along the ground when turning. It revolves on grease packed roller bearings, insuring a smooth, easy running outfit, even after being exposed to the weather. The bearings require no attention for an entire season, and there are no oil drippings to mar the green.

The rolls are smooth cast iron, with slightly rounded edges. The handle is made of galvanized iron, and has no wood parts to rot or become splintery.
