aerial tank, clubhouse and golf course provides plenty of problems for the designer, and is usually solved by giving the golf course the short end. There is no set answer or formula for these problems, each is a study in itself. The only common basis is the need for separating the house supply from the course supply, and having each independent, if this can be arranged.

Importance of Water Supply

The importance of an adequate water supply cannot be overstated. Suitable pressure ordinarily cannot be supplied by either city water, aerial towers or standpipes. When golf course architects learn that the 20, 30, or 40 pounds pressure provided by municipal water systems or aerial tanks is woefully inadequate either for forcing the water to the extremities of the small pipes usually found in tee and green systems or for efficiently distributing water through up-to-date equipment, proper attention will be given to the water supply. But until then the greenkeepers of the nine-hole courses must struggle along with inadequate water supplies.

Again, if it be known in advance that the water pressure is inadequate, why should the designer of the water system compound an untoward condition by specifying pipe sizes which would be small even with pressure pumping? Yet this double inadequacy is common practice. You can go into any golfing district and find greenkeepers making from five to ten sprinkler settings to each green even on courses designed by prominent architects!

The adequacy of the initial water pressure is paramount to successful irrigation practice, and is equally as important as the pipe sizing or the layout.

Layout

The layout of the piping system for tees and greens for nine holes should, of course, follow a design suitable for combined fairway, tee and green irrigation for a future 18-hole course (if extra land is available) and should be constructed of permanent piping.

Rarely, however, will any new nine-hole course have funds for this and in nearly every case the problem is to provide water for tees and greens at the absolute minimum capital outlay, which means galvanized or even black, or second-hand, steel pipe laid in straight lines connecting the tees and greens with the least amount of piping and without any regard for future construction.

True Organic Fertilizer Best for Fall use

For many years manure has been the standard fairway fertilizer—because it supplies the *right* kind of plant food for turf in the right proportions.

And, it has many advantages for Fall use. Being truly organic, it undergoes transformation in the soil—the nitrogen being converted into nitrates through bacterial action. However, the low temperatures of winter inhibit bacterial activity and thus avoid leaching loss of nitrates by preventing their formation.

A NEW COW MANURE

Free of weed seeds and debris

So much for the value of manure. It seems to be quite generally preferred—when available. Now we remove *all* the objections. Cow manure, the richest, most complete, Natural fertilizer is available in fine granulated form . . . mixed with peat moss, the best humus forming, soil improver known.

DRICONURE—this new product—is not just peat moss and manure trash mixed. It is a specially processed kind of manure-peat moss bedding, consistently uniform in quality and contents . . . maintaining an even 2-1-2 count, and dehydrated to strengthen *five times*.

Gets Down to the Roots and Stays There

DRICONURE, unlike fresh manure, gets right down to the grass roots and *builds up* your soil. Fall and Spring rains will pound it down and mix it *into* the soil. It is prepared for this purpose. May we suggest that you try it and compare results with *any other fertilizer on the market*. It may not produce the rank, quick growth some of the more highly concentrated chemical fertilizers produce, but it will continue to nourish long after they would have been used up or leached away. Try it on a section and judge for yourself.

Complete information and prices on request.

There's Nothing Better Than an Everson Pool to Bring the Members Out

There's nothing like an Everson Pool for bringing the entire family to the club, day after day; nothing more enjoyable than a refreshing plunge after a hot 18. Everybody likes to swim, especially in a beautiful Everson Pool where the water is always sparkling, clear and germ-free. Properly operated a pool will more than pay its way, directly. Its indirect benefits often turn loss to profit.

Everson Developments and Bulletins

For over a quarter of a century Everson has led in the development of swimming pools. Everson Engineers are constantly bringing out new and better pool equipment. Bulletins describing outstanding pools and these latest developments are yours for the asking. Write for them today.

Some Recent Everson Country Club Pools
