

# Clear the Dry Weather Hazard!

**NEXT BEST TO RAIN**

**Efficiently  
Economically**

## The Double Rotary JUNIOR Sprinkler

The ideal all-purpose sprinkler for home owners. Four sprinklers in one. All the proved features of the above Heavy Duty Model. Sold on same guaranteed basis.

**YOU** clear the dry weather hazard in one quick shot when you put the Double Rotary Sprinkler to work on your course. These tested and proved sprinklers are sure protection for the investment you have made in greens and fairways. Distribute water more nearly like gentle rainfall than any other mechanical means yet devised. Sprinkle with sufficient force to penetrate soil and reach grass roots. Will not wash or pack soil. Will not puddle. Prevent baking and burning.

The Double Rotary Sprinkler lowers maintenance costs . . . self-operating . . . saves cost of an attendant. Ready for instant action at the turn of a water faucet.

## A BIG WATER SAVER

A scientifically designed sprinkler that will not waste water. Constant, even sprinkling permits water to be absorbed into ground before area is covered again.

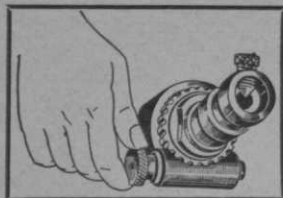

*Sprinkles 5,000 Square Feet*—Covers any circular area up to 80 ft. (more than 5,000 sq. ft.) or down to 15 ft. in diameter, according to water pressure. One Double Rotary will sprinkle an entire green at one setting with sufficient water pressure.

Made of finest materials. Tobin bronze gears running in bath of oil. Convenient skid base, easily moved by pulling on hose. Ask local dealer. If he cannot supply you, order direct. *Try 10 days.* If not satisfactory, return sprinkler and money will be refunded. New descriptive illustrated catalog on request.

Next Best to Rain

## This New, Simple, Easy Adjustment Controls Speed of Rotation

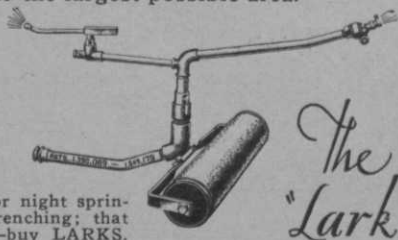

### and Enlarges the Sprinkled Area

Here is another outstanding feature added to the many advantages of the LARK—A worm-gear adjustment which makes it easy to control rotation of the main stream and maintain rotation no faster than one revolution per minute. Slow rotation avoids air resistance, permits farther throw of the main stream, and allows even sprinkling over the largest possible area.

It sets the nozzle of the main stream in any desired position and keeps it there. No bother or fuss. No tools needed. Simply turn the worm-gear as illustrated.

Other advantages—never-failing performance, EVEN distribution; no tearing up of turf; economy of water. No wonder the LARK is golfdom's leading sprinkler.

If you want sprinklers that are SAFE for night sprinkling; that give the grass a thorough drenching; that are always ready when you want them—buy LARKS. Ask about our 10 days' trial offer.

## GOLF TURF must stand ... the SUMMER TEST

yours will if you **APPLY NACO**  
... this **SPRING**

Only healthy grass on fairways and greens can stand up during the rough treatment of summer. Only well-fed turf can resist the combined onslaughts of dubs, sun, drought, disease and insects and still keep its velvety complexion.

When hot-weather hazards put your course to its severest test, you're thankful for NACO, the complete golf course fertilizer.

NACO fertilized turf grows right and stays right throughout the playing seasons. NACO imparts those qualities of strong root-structure and weed-killing, vigorous growth so much desired by greenkeepers.

NACO-fed turf comes through the summer-test with flying colors.

# Isn't this the sensible way to fight BROWN PATCH?

Year by year, one greenkeeper after another is making this decision: It's easier to prevent brown patch than to repair turf damage caused by the disease. And it costs a lot less!

At hundreds of the nation's finest courses, greens now are treated at weekly intervals throughout the season to prevent brown patch. With the two most dependable fungicides, Semesan and Nu-Green—both now available at new low prices—preventive treatments for the entire season cost but a fraction of the initial investment in your greens. Contrast this small cost of brown patch prevention with the usual high cost of course maintenance—or even with the expense of returfing greens destroyed by brown patch—and you'll see how sensible this plan of protection is!

Used regularly, either Semesan or Nu-Green will effectively protect turf against both large and small brown patch. When the disease has already appeared, either fungicide will kill it promptly, without even the slightest injury to turf.

Semesan, the original brown patch fungicide, prevents and controls the disease under all conditions, but is especially recommended where the soil is highly fertile. Nu-Green contains the same effective ingredient as Semesan, plus other ingredients which invigorate grass

growth. For that reason, it is advised where soil fertility is lower.

Both Semesan and Nu-Green (the only brown patch disinfectant licensed under U.S. Patent No. 1,787,581) may be obtained from your regular seedsman or golf supply house. Order now and start turf treatments at once to protect your greens.

## SEND FOR FREE PAMPHLET

Write today for new pamphlet, "Fungicides for Controlling Brown Patch." Gives treatment methods; advice on disinfecting grass seeds; opinions from turf experts and well known greenkeepers.

## FASTER · BETTER · CHEAPER

Note the arrangement of the two front mowers, which cut the grass before it is matted down by the drive wheels.

For transporting, the mowers are swung around behind, and the total width is less than that of a three-unit outfit.

New Master five-unit outfit. Two extra mowers can be added instantly, converting it into a seven.

Last year's mowing machines are as dead as last year's dandelions as far as present conditions are concerned. The Toro Master Seven is more flexible, faster and saves 50% in operator's time, with constant savings in operating and upkeep costs. Cuts a 16-foot swath, mowing a standard 18-hole golf course in approximately 8 hours. It will pull seven mowers in high gear over 20% grades and five mowers over 25% grades. It does better work because the two front mowers cut the grass before it is matted down by the drive wheels, thus eliminating all streaks after cutting. The two outside mowers are opposite the driver so he can easily watch his cutting swath.

A wheel base of only 103 inches from the front of the tractor to the rear mower provides a closely coupled mowing outfit with a maximum degree of flexibility. Sturdy electrically-welded frame . . . no twisting or buckling.

The Toro Master Seven can be used for many jobs besides mowing. The mowers and frame can be disconnected in five minute's time and the tractor used for general utility purposes.

If you are faced with demands for lower maintenance costs, it will pay you to see or write your nearest Toro distributor:

# For that green you love to touch

Whether it takes one or six to get on the green, every golfer enjoys playing one that is kept smooth, velvety and free from Brown Patch by Barbak. Barbak eliminates deadly Brown Patch, that destroyer of good greens.

Barbak is so easy and safe to apply. It won't burn the turf, whether you apply it with your top dressing or water it in. And it's odorless, mixes easily and doesn't cake in the can.

Start applying it at the beginning of the season, and prevent Brown Patch troubles. Where greens are already affected, Barbak will stop the fungus growth immediately, and quickly bring back a normal stand of turf.

Check these Barbak advantages on your own course this spring. If your golf supply house doesn't carry Barbak write us for the name of your nearest distributor.

## Two Reasons for Buying Roseman Mowers:

### 1. ECONOMY

If you need new mowers write for a list of Roseman users before buying. You will find leading Golf Clubs all over the world use them. These users all agree that no fairway mower can do as good work year after year for as little money as the Roseman.

These users can tell you that Roseman Mowers cost more in the beginning because unbreakable materials and precise working parts are more expensive. But smart buyers of today know mowers are bought to last more than one season. Over a period of five, ten or more years, Roseman Mowers cost less, because they remain in perfect working order. Let us prove this!

The full width roller drive gives unusual power, and the mowers being well constructed can operate at top speed with effectiveness. This saves time and labor costs, and is especially helpful in midseason when the grass is growing fast.

### 2. TURF DEVELOPMENT

Being the only ROLLER MOWER\* for fairways, the Roseman is the only one that builds turf. The light rollers gently massage top turf, press it down on the nourishing subsoil, and seal heat cracks—producing a healthier growth. Greenkeepers can show you spots on their courses where this steady Roseman treatment has brought poor turf to healthy growth. Yet the rolling was purely incidental to the regular mowing.

Without Roseman Mowing, these greenkeepers could correct such turf conditions only by separate rolling—a considerable expense.

Roller drive mowing also tends to eliminate cuppy lies. It prevents scalping, because the bed knife is always lifted over high spots by the roller. The Roseman roller drive does not slip or skid because the full 26 inches of traction gives three times the power that 8 inches of side-wheel width can give.

## Roseman Construction Features:

Timken Tapered Roller Bearings on Cutter.

Hyatt British Tank Roller Bearing on Rear Axle.

Alemite Forced Feed Lubricators.

Guaranteed Non-Breakable Malleable Iron Slide Frames, Gear Cover, Bed Knife Shoes and Caster Wheel Forks.

Drop Forged Machine Cut Gears.

LIGHT ROLLER DRIVE, for better Traction and turf development.

Eliminates separate Rolling, and Brings Denser Turf Growth, Healthier Root Development, Prevents Scalping, Eliminates Cuppy Lies, Seals Heat Crevices, Retains Moisture in Soil.

*\* (Our patents give us the exclusive right to all ganging of Roller Type Mowers)*
