Clubs Get Set to Pay for Officials' Boners

GET set again for another season of persistent errors by newly-elected and well-meaning, but inexperienced club officials.

Always anxious to reduce operating expenses, the newcomers take one solemn glance at the pay-roll and forthwith insist that the manager reduce his kitchen and dining staff until service is not only slow but sloppy.

This reduction in size of staff makes a good showing at first, but it's usually far more than offset by the cost of inexperienced, emergency help brought in for club parties.

The practice also helps make club operating costs high by causing expensive turnovers in club labor and undue expenses in training help.

Experienced managers despair of ever showing new officials the situation in its true light and are reconciled to the increased costs that follow this and similar false economy moves.

Classified Ads

CONTINUOUS FERTILIZATION WITHOUT CONSTANT ATTENTION

FOR good health, turf needs regular feeding. But during some seasons of the year so many other jobs demand attention that, too often, well-intentioned fertilization plans are pushed aside.

Just such facts are partly responsible for Milorganite's popularity, for Milorganite not only provides the right kind of plant foods but, because of unique characteristics, it releases its plant foods gradually over long periods of time as the grass needs it.

This insures ample, scientific, dependable and continuous fertilization with no more than two applications a year—One in the Spring; One in the Fall.

No wonder Golf Clubs use more Milorganite than any other fertilizer.

THE SEWERAGE COMMISSION
MILWAUKEE WISCONSIN

Scientific, continuous and dependable. Rich in elements grass needs.

Long lasting. One application in Spring; One in Fall.

Frequent reseeding unnecessary. Saves time and labor costs, also.

MILORGANITE
