decoration and ornamentation. Rich panels, mirrors, and ample cabinet and shelf space are placed in a harmonious, colorful arrangement. The working arrangements include three roomy storage cabinets conveniently located between display shelving. As business grows, additional units can be added easily, which is another strong selling point. Salon-Style fixtures can be purchased now for as low as \$16 per foot, which includes complete back bar assembly and front counter. The company will gladly supply full information on any size Salon-Style bar upon request.

Transite Pressure Pipe, manufactured by Johns-Manville, 22 East 40th St., New York, N. Y., which is now used extensively for golf course irrigation systems, is establishing a remarkable record of economical installation and performance. Because of its asbestos-cement composition Transite Pipe is immune to tuberculation, the internal corrosion responsible for decreased capacity in ordinary pipe. The pipe also offers high resistance to the effects of corrosive soils, affording a virtually maintenance-free line.

The initial high flow capacity of the pipe, Williams & Hazen coefficient of friction C-140, can never be reduced by rust or tuberculation, so pumping costs remain low and sprinkler coverage remains high. When Transite Pipe is laid, only the narrowest trenches are necessary. This minimizes damage to fairways. Simplex couplings help speed up the installation, and unskilled labor can be efficiently used for assembly.

A new industrial wheel tractor, the Model "IB," has been announced by the Allis-Chalmers Mfg. Co., Milwaukee. This specially designed tractor is built low, short, compact and powerful to handle any kind of hauling work. With 15.2 drawbar horsepower, the unit is well suited to golf courses, as it can handle 3, 5 and 7 gang fairway mowers, highway mowers, water wagons, sprayers, tampers, rollers and hauling work.

Because the "IB" squats on the ground, it can negotiate the most uneven ground without tipping over. It has both a foot brake and individual hand brakes for short turns. With 3 forward speeds and

a reverse, the "IB" can travel over the course at speeds up to 10 m.p.h. For power the "IB" has the 18 H.P. heavy duty, medium-speed tractor engine that has been proved in over 28,000 of the Model "B" tractors.

Pomona Pump Co., Pomona, Calif., manufacturers of deep well turbine pumps, announces a new pump, the "Little Chief," designed to fill the need "betwixt and between" the small domestic pump and the "too big" deep well turbine. The Little Chief is the well known Pomona deep well turbine pump reduced in size, but not in stamina, reliability and smoothness of operation. It is designed to furnish an independent, plentiful water supply for the smaller golf clubs, swimming pools, estates, cemeteries, and the like, with capacity from 700 to 3,000 gallons per hour.

Cast iron parts of the Little Chief are of Pomoloy, of extraordinary high Brinell hardness. "Pomoloy" is manufactured by and is exclusive with the Pomona Pump Co. The Little Chief has no metal-to-metal bearing surfaces, but rather, highly resilient revolvable rubber bearings which operate against stainless metal shaft sleeves, and are unusually resistant to imbedding of sand and grit.

The company, of course, has pumps of all sizes to handle any water demands above the Little Chief capacity. For years golf courses have been getting satisfactory, economical service from Pomona pumps, which were purchased in many sizes and designs to meet the specific demands of the particular courses.

The Pomona company has available considerable material giving useful reference information on water requirements, formulas for calculating performance, etc., that it will gladly supply free upon request.

The Adler method of washing sport hose, developed by the Adler Co., Cincinnati, is an important step in contributing to the longevity of the item. It is not generally known that the manner in which hose are washed, after they are knitted at the mill—results in certain advantages to the wearer. This statement refers particularly to the fact that the washing process, as carried out

by the Adler company on their Sport Master hunting and athletic hose, results in the complete removal of all acids and harmful metallic salts, and in an attractive, clean and clear appearance.

The elimination of such acids and metallic salts

increases the absorptive power of the hose. This means "drier" feet and longer wear. It has been observed, in connection with this process, that the resiliency is increased, resulting in springier and softer foot cushioning.

WANT ADS: Rates, 10c Per Word—Minimum, \$2.50

Pro-Greenkeeper—open for position. American born, age 35. 15 years' experience; member of P.G.A. Thorough knowledge care and upkeep Bent and Bermuda Greens. Wife has 15 years' experience club cateress and manager. Desires Pro or Pro-greenkeeper position or couple combination. Both have A-1 credit rating. HERSHEY—another fine course piped with Cast Iron

*Looking down the second
fairway.*

*Courtesy Hershey Country
Club, Hershey, Pa.*

Those responsible for the up-keep and budget of a fine golf course should answer this question when considering a fairway irrigation plan: Will the first cost be the last cost? Cast iron pipe serves for a century with little or no maintenance expense. That is why it is the standard material for underground mains. Available in sizes from 1¼ inches. Address inquiries to The Cast Iron Pipe Research Association, Thomas F. Wolfe, Research Engineer, Peoples Gas Building, Chicago, Illinois.

CAST IRON PIPE

The Standard Material  *for Underground Mains*
