DISPENSERS
AND SOLUTION

STANDARD
PREVENTIVE
TREATMENT FOR
ATHLETE'S FOOT
USED BY
U.S. NAVY

HANDLES
CROWDS AS
FAST AS THEY
RUN FROM
SHOWERS.
ASSURES
COMPLETE
PROPHYLAXIS
IN THREE
SECONDS.

1 User steps on Peda-Spray Dispenser, which automatically starts spraying feet at first pressure.

2 Quick Side-to-Side Foot-Pressure sprays feet completely in 2 or 3 "left-right" movements.

3 3-Second Application of Peda-Spray is completed "in stride." User makes way for next.

High Authorities Recognize Peda-Spray's Effectiveness... Peda-Spray is used by the U.S. Navy and Army. As a public health measure, Peda-Spray manufacture was recommended to WPB in September, 1944, by the National Research Council, composed of representatives of the Army, Navy and U.S. Public Health Service.

What Peda-Spray Is... "Peda-Spray" is the name of the Self-Contained Dispenser, and of the Solution used in the Dispenser. Peda-Spray Dispenser is built under U.S. Navy specifications. The base contains the Solution, 3 pressure-actuated

pumps, and an aluminum grill on a fulcrum steel shock-spring. Peda-Spray Solution is a special formula, accepted for use, after exhaustive tests, by the U.S. Navy Medical Department, and accepted under the Pure Food and Drug Act.

What Peda-Spray Does... Peda-Spray provides the *only automatic* prophylaxis treatment for athlete's foot. Each user gets an individual treatment of fresh, full-strength, uncontaminated solution.

Send Now For Details... Write today to: Peda Spray Company, Inc., 55 West 42nd Street, New York 18, N. Y.

green velvet carpet. The shade tree chapter by Pascal P. Pirone and the flower and plant chapter by Henry M. Biekart are two that are not only especially good for the home dweller but contain some useful information quite a few greenkeepers and pro-greenkeepers will welcome. The chapter on "Your Home Setting" by Charles H. Connors contains excellent simple landscaping design pointers most course superintendents could apply to advantage at their clubs.

Midwest Turf Foundation

At the annual meeting of the Midwest Turf Research Foundation held March 18 at Purdue University, Lafayette, Ind., secretary G. O. Mott reported a steady growth in membership with the organization now embracing more than 100 golf clubs in the midwest states. 1945 officers, headed by A. L. Brandon, St. Charles, Ill., were re-elected as were directors with the addition of Neil Ransick, Secy. Cincinnati Golfers' League. The program of turf experiments will be extended during 1947 under the guidance of the research program committee composed of agronomists from the various state agricultural experimental stations.

American Courses

(Continued from Page 28)

mouths water. It would give British golf a good "kick in the pants" and wake up those who now promote our tournaments if an American business man were to go to England and stage a first class tournament with prizes of the same magnitude that are given to American contestants over here. It should, incidentally, turn into an excellent gamble for the promoter himself. I know the entry would be enormous and the interest the general public would take equally big.

During the war, we had to make our clubs pay as best we could. Due to the fact that many of our members were abroad in war service, the financial income was, with few exceptions, very much smaller than in previous years. Means were tried to meet the money shortage and I do not know whether it has been this country's experience also, but the takings at the bar in nearly every case were practically quadrupled during the war years. It was this experience that made the golf club proprietors realize that there was a great deal of money to be made out of the social side of golf—much more in fact than from the ordinary revenue from the golf course itself. Because of this our clubs are

Don't let INSECTS spoil your Turf... use NIAGARA LEAD ARSENATE!

A good turf is a thing of beauty. Don't let various grass destroying worms in the soil destroy it! Niagara Lead Arsenate is a very effective controlling agent and is easy to apply. Application is usually made by mixing with sand or top dressing and spread over the turf surface. Then when the turf is watered, the Lead Arsenate is washed down among the grass roots, thereby depositing the poison in the feeding area of the worms. Niagara Lead Arsenate may also be mixed with fertilizer and applied in the usual manner. Grub control on turf is economically and practically accomplished by proper treatment with Niagara Lead Arsenate.

We'll be glad to send complete information about Niagara Lead Arsenate. Write to:

coming round to your way of doing business. Incidentally, an enormous amount of money was unexpectedly made by seaside courses selling their over-abundance of sand. This surprised them a great deal as I daresay it does you.

The GI Bill of Rights is indeed a remarkable one, for it seems to me to provide for practically every idea and wish that the young American may have. I was playing golf with a well known professional the other day and he was telling me that he had had a request from an American boy now discharged to become a golf professional. He wished to serve under this famous man and learn from him the art of the game and the art of being a successful golf professional. The arrangements have now been made and the boy has started his career. He is doing all this as the result of government aid. This serves him well and also the professional who has taken him on. It makes me think too that any young man today who intends to take up golf as a career should first realize that it is not a get-rich-quick process which some of them seem to imagine, but a definite process of learning, working and eventually conquering. Here again is an opportunity for an American business man to open a school for would-be professional golfers and run it much in the same line as a theatrical agency, drawing his percentage from the successes that he turns out.

Hard working authors like myself have to pay our agents for representing us! So I do not see why such an arrangement between professional and his agent should not work very advantageously for both sides.

Plan Service on Study of Members' Needs

(Continued from Page 30)

go back to carrying single again. That situation probably will work itself out. In increasing numbers members prefer to carry or wheel their own bags rather than have a half a caddie who's always on the other side of the course with the club they need.

I think all clubs will have to make closer tie-ups with schools to help solve the caddie supply problem.

The rearrangement of the shop to give it a bright new look of the first peace year is going to be something for every pro to consider. We have a great improvement in Cherry Valley's new golf shop. It's close to the first tee and the club cleaning shop is under the same roof. Our old club cleaning department was 100 yds. from the golf shop.

21 Troubles

(Continued from Page 32)

18 **MACHINERY MAINTENANCE** is an ever-persistent problem. Breakage occurs in spite of the best care and management, and prompt attention with adequate repair knowledge is required. Unfortunately, most of us are not mechanics, but the use of a wrench and an oil can will go a long way toward keeping machinery in a good state of repair. A knowledge of motors, electric wiring, mower sharpening, welding and other technical machine jobs is helpful.

19 **LABOR AND WAGES:** Not the least of the problems existing on the golf course are those caused by shortage of labor or inequalities existing in wages paid to golf course employees. It is often true that caddies, kitchen help or waiters make several times the income that do the regular golf course maintenance employees. Naturally this is reflected in worker attitudes, and it becomes a labor-management problem for the greens superintendent. Some method of equalizing wages for work of equivalent categories appears to be the only solution.

20 **PUBLIC RELATIONS:** The golf course superintendent often needs to be a diplomat when dealing with club members. Relationships and personalities should be studied carefully, and the course superintendent at all times should reflect his best behavior toward the club members. The ability to swallow a certain amount of pride is an excellent characteristic, irrespective of the type of work being done, and in the long run it is bound to pay dividends. The superintendent should, by all means, listen to complaints with an open mind and from time to time take these to his green-chairman for advice and counseling.

21 **KNOW-HOW and SUPERVISION.** Last, but not least, there is an ever continuing need for more education on subject matter, labor relationships, and human psychology. The golf course superintendent needs to be capable of developing projects which meet the needs of the golf course and which are acceptable to his green-chairman, and if need be, to the members of the club. In order to do this, he must be well fortified with factual information on the subject of the moment. In supervising employees he must be fair and honest with them and capable of appreciating and understanding their problems. He should take the time to evaluate employees at regular intervals, pointing out to them their good points as well as their faults. Frank evaluations mean better relationships all around.

Wartime Invention Controls Athlete's Foot

With millions of men freshly returned from the fighting zones, a widespread epidemic of athlete's foot is threatened, reports an official of the U. S. Navy Bureau of Medicine and Surgery. "War conditions favored athlete's foot infection. Men had to go days, at times, without removing their shoes. In most of the Pacific area, intense humidity, which fosters the fungi, prevailed. Despite all efforts at sanitation, both Navy and Army doctors found fungi infections a problem," states this official.

According to Professor Fred. D. Weidman of the University of Maryland, "Athlete's foot ranked second among all causes of hospitalization of servicemen in the United States."

A wartime development in the preven-

tion of athlete's foot was the Peda-Spray dispenser and solution, adopted as a standard prophylaxis treatment by the U. S. Navy after exhaustive tests by its medical department. Accepted by the National Research Council as a public health measure, the Peda-Spray dispenser and

New Gauztex Pro Package

"Dual Purpose" keynotes 1946 promotion on Gauztex, the gauze bandage that "sticks to itself, never to you," according to an announcement by General Bandages, Inc., manufacturer. Numerous pros have advised the company the material works well in wrapping handles, in addition to its normal use as a protective bandage against blisters.

New display material has been prepared, around the theme "For Non-Slip Grip." For the first time in several years, Gauztex is thus available in a merchandising display aimed at golf customers and with substantial profit to the pro. The company expects to retain its current distribution through sporting goods wholesalers, who will have dozen lots available in the new display.

When asked about the pre-war tin package, J. A. Hinkamp, president of the company, had this to say: "We want 'em
