# 400 Royers

## are improving greens and fairways!

Of the more than 7,000 Royers in service today, over 400 are used by golf clubs and public courses. Those with a Royer during the priority era have often blessed the day they obtained it. Through the war years, healthy grass has been maintained on the greens and fairways of these courses, despite the scarcity of manpower.

The Royer Compost Shredder and Mixer reduces labor required to prepare top dressing up to 89%. It shreds, mixes and aerates sod, compost and sewage sludge, discharging an open, smooth top dressing that results in healthy greens and fairways.

A model for every golf course—gasoline engine, belt-to-tractor or motor driven. Prompt deliveries.

# WORTHINGTON GRASS BLITZER

*Cuts Labor*

*Cuts Costs*

*Keeps rough in playing trim*

Take a few minutes with us to analyze your rough. If it's like the rough on most golf courses all over the country, it has been neglected during the war. Now for its *future*. The old sickle-bar method or the fairway mower "set-up" type of cutting has been proved obsolete, expensive, and unsatisfactory. The Worthington Grass Blitzer has these advantages over old-fashioned methods:

*The Worthington Grass Blitzer is practically built to your specifications. You choose reel sizes, number of blades, 3-5-7 or 9 gangs, and have a Grass Blitzer that best meets your own local conditions.*

- Cuts mowing time by 50% or more.
- Can be easily attached to any make of tractor.
- Can be operated at any speed practical for your conditions.
- Height of cut controlled by hand adjustment in  $\frac{1}{4}$ " increments.
- No rollers—grass stands straight after mowing.
- No raking, as is necessary after sickle-bar mowing.
- Brings back grass—crowds out weeds.
- Extremely flexible. Can be used for trimming outside faces of many bunkers and traps.
- Cuts down sickle and scythe work.
- Mechanically practically trouble-free.
- Only pneumatic tires rest on ground.
- Keeps rough as members and their guests want it—in playing trim!

Your Worthington Grass Blitzer is the "brother" of the thousands in use on airfields all over the world—the same rugged machine that met rigid military tests and won for the Worthington Mower Company the coveted Army-Navy "E" Award—three times.

Now you can get TERSAN,\* DuPont's non-mercurial turf fungicide, to prevent and control Dollar Spot and Brown Patch.

TERSAN,\* formerly called Thiosan, was missed by many during the war because it is one of the safest and most effective controls for these fungous diseases that plague good turfs.

Gives a wide margin of safety—doesn't shock, yellow or retard growth when properly used. Easy to apply. Safe in inexperienced hands. Disperses readily in water. Just spray it on.

Du Pont SEMESAN\* and Special SEMESAN\* are also available. Just spray them on, day or night; no watering in.

TURF TIPS**

Milorganite is the ideal source of nitrogen for greens. They need enough Milorganite to maintain dense turf and minimize dollar spot.

Fairways have been generally neglected. Turf improvement should start at the first opportunity. Most fairways are badly in need of fertilizer, many require lime, and on some a weed eradication program should accompany or precede fertilization.

Our Turf Service Bureau and Soil Testing Laboratory are available to those desiring assistance in formulating an effective and economical green or fairway fertilization program.
