

fluorescent dyed spun nylon which shine brightly. Available in five brilliant colors—Shok Green, Shok Blue, Shok Yellow, Shok Orange and Shok White—they blend well with sweaters, hats and all clothing similarly treated. Ribbed, with a cuff top, the anklets are lightweight, making them especially practical for summer.

#### GLYCO-ZONE, NEW DISINFECTANT AND DEODORANT FOR GOLF CLUBHOUSES

Columbia Chemical Co., 154 E. Erie St., Chicago, report a lively demand from club managers, pros and locker-room attendants for their newly developed sanitizer Glyco-Zone. In bomb type containers the new air spray is effective in destroying air-borne bacteria and viruses so prevalent among groups indoors. Glyco-Zone is efficient as a disinfectant for germ carrying contact objects and as a safeguard against bacteria on food handling, serving and storing equipment. Its deodorizing properties are especially important for it quickly rids the air of foul odors resulting from perspiration, damp basements, showers, toilets, smoke, etc. Registered with the U. S. Dept. of Agriculture, Glyco-Zone is non-toxic, will not harm humans or injure fabrics. For full particulars and prices write Columbia Chemical Co.

#### BENSON-MACLEAN STEPS UP PRODUCTION TO SUPPLY GOLF COURSES

Benson-Maclean, Bridgeton, Ind., manufacturers of Activo, soil energizer, and Manna, concentrate for making liquid fertilizer, have stepped up their production to permit allocation of a sizeable portion of their output to golf courses. Specializing in soil energizers and conditioners, Benson-Maclean's entire production, up until this year, has gone to the home-garden market in which their products have met with wide success. With this year's increased manufacturing facilities, deliveries to golf clubs began March 15th with their golf market schedule calling for prompt shipments thereafter. Full particulars on the com-

## JONES TELLS OF RELATIONS WITH SPALDING

Bobby Jones, interviewed shortly after his landslide election as greatest golfer of past 50 years in the Associated Press poll, related his association with the Spalding organization. Said Bob:

"When I became associated with A. G. Spalding & Bros. in 1931 we were merely

"Golfer of the Century" Bobby Jones, stands beside portrait which shows how he looked about the time he was making his grand slam.

formalizing and putting on a business basis a relationship that had existed for years. I always played a Spalding-made golf ball from my very first tournament.

"While I was at Harvard University," continued Bobby, "one night in 1924 when I probably should have been studying, I designed a driver. I'd been thinking about it for some little time and I just couldn't resist the urge to put it down on paper. Luckily, I'd taken mechanical drawing so

I made three sketches, of different views, and indicated the exact specifications. Then I wrote a letter to my friend, Victor East, at Spalding's, and asked him if his company would make this club for me." Jones paused for a moment and then, with a faraway look in his eyes, added: "I could get wonderful distance with that wood but I found it a little too treacherous when I was not exactly 'on the stick'. However, it taught me something about club design. Later I began to work on my irons and got Spalding to make them for me. I haven't any idea how many they made for me but I do know that I had a number of their clubs in my bag while I was playing in tournaments.

"After I had definitely retired from tournament play in the fall of 1930," Bobby recounted, "I agreed to make the golf movie showing how I played certain strokes. It was around that time Spalding asked me if I'd become associated with them. Well, it was sort of a 'natural'—I'd been playing their equipment, and my relations with the company and its people had been most pleasant for years.

"Using my 1930 set as a basis we worked out and developed the 'Bobby Jones' line which Spalding is manufacturing and selling today, although of course we have improved the design continually."

Aside from playing informally every year in the Masters Tournament at Augusta, Ga., where he is the president of the Augusta National GC, Jones has stuck by his retirement of 1930. Since 1948, when he had to undergo an operation for an old back injury, he has been very limited in all his golf activities. In discussing this handicap he speaks very frankly and without self consciousness.

"Even though I'm not playing golf right now, I'm lucky to be active in several things which preserve my association with the game," said Bobby. "Besides the Augusta Club and the new Peachtree Golf Club we have organized here in Atlanta, as Vice President of the Spalding Sales Corporation and a consultant on their designing, I am deeply interested in seeing that golfers get clubs and balls of the finest possible design and construction."

15, 20 or more feet, which can be readily coupled together with metal couplings provided, Hydro-Flex is available in several diameters from 4" up. Reducers are available for coupling to a hose of various diameters.

Punch holes in Hydro-Flex tubing as wanted, using a pick or sharp point. Holes

can be staggered, opposite each other or on either side, to obtain the desired distribution of water. Tubing will withstand any pressures encountered in irrigation operations, weighs only a fraction of ferrous or non-ferrous pipe or tubing, costs are low.

### NEW PLOW FERTILIZES AT ROOTS

Ferti-plow Co., div. of Corn Belt Products, Inc., 1711 N. 42d St., Omaha 3, Neb., is having highly satisfactory reception for

its new soil building plow for sub-soil tillage and deep placement of commercial fertilizers. Purpose of the plow is to place fertilizers economically at various controlled depths without loss from wind or rain and put the material near to root area without disturbing or displacing the top soil or surface crop.

Units have been demonstrated with impressive results to many midwestern and southern county agents and agricultural college groups. Golf course supts. have witnessed several of these demonstrations and have expressed keen interest in having demonstrations extended to golf courses where it is believed the Ferti-plow will have a large field for its revolutionary operation.

The 24" wide cutting base can be adjusted to depth varying from 3 to 12 inches through the positive positions incorporated and combination coulter and depth controls located in front of the thin beam. The plow is hollow on the backside so that the fertilizer can be evenly distributed by the engine driven high velocity fan while the soil is held in a raised position by a 9 inch extrusion on the back of the base.

As high as 1000 pounds of fertilizer per acre can be applied with the single base

More and more range owners are turning to McLaughlin for new and rebuilt dependable range balls, sold with a guarantee against splitting—at a price you can afford to pay.

Also factory seconds carrying the above guarantee available from time to time at reduced prices.

play stand clusters the clubs in an attractive and orderly arrangement around a flag and pole which simulate the green "pin." Soles of the clubs rest on a circular dais, the surface of which is painted to look like the bent grass of a green. A series of metallic clips located near the top for the flag shaft holds the clubs in position, yet permits each to be easily removed for examination. Color scheme of the all-metal display stand is ivory, red, and white. Further information may be obtained from Burke Golf, Inc., Newark, O.

### ALLIS-CHALMERS PROMOTIONS

R. S. Stevenson has been appointed gen. sales mgr., Allis-Chalmers Tractor Div., succeeding Marshall L. Noel who has joined Tractomotive Co. as vp. and treas. Stevenson joined Allis-Chalmers in 1933 at Kansas City as a salesman. He worked his

way up to become Northwestern territory mgr., then Southwestern Territory mgr., and in 1948 was made asst. gen. sales mgr., from which position he was promoted to the company's top sales management spot.

### SPALDING USES ELECTRONICS IN WOOD HEAD ASSEMBLY

By the ingenious use of modern science and electronics A. G. Spalding & Bros. assemble a wood head and the alloy steel shaft so that the waterproof bond between the wood and the metal is stronger than either the head or the shaft by it-

self. To accomplish this feat, a skilled craftsman employs concentrated heating, from a power circuit operating on the same basic principle as a radio transmitter and yet, he does not heat any part of the head except the portion touching the steel shaft. Furthermore, this heat comes

"from the inside out" and the operation is so quick that the heating effect is localized to the bonding area between the shaft and the wood head.

To test this wood head and steel shaft assembly, the Spalding Research Laboratory at Chicopee, Mass. has taken a wood club and 'shot' golf balls at it with a far greater impact than that of the club head striking the ball under any playing conditions. Also they have placed a wood club in the 'whacking machine' and let it smack balls with terrific force. In both these tests the assembly joint of the head and shaft remained unaffected and when the blows were sufficiently increased either the head or the shaft gave way—never the joint.

Another test on this assembly was accomplished by attempting to pull the head from the shaft in a machine. To effect a

separation it was necessary to use about 2,000 pounds, or nearly one ton, of direct pulling force. To visualize what this weight would mean, seven girls, from the Spalding organization, stood on a platform and were hoisted in the air, their platform held only by the wood head of a club, as can be seen in the photograph.

The identical wood club, used in lifting the seven girls, had been tested in the Universal Testing machine shown to the left to see what pressure would crack the persimmon wood head. When this pressure had reached 10,000 pounds, or the equivalent of the head being run over by a freight car, a photograph was taken. When the club was removed from the machine and examined it was found to be in playable condition and was then used to lift the girls.

### Zaun Conducts Tests On Southern Turf

Chas. W. Zaun, who has for the past 25 years been in the golf course and lawn equipment business in the south, is now conducting experiments with rare Bermuda and bent grasses.

These experiments are similar to those conducted by the Tifton (Ga.) Agricul-

tural Experiment Station, as well as the Florida Experiment Station, trying to develop better golf course greens in the south.

Zaun is also experimenting with Illahee Fescue and other grasses in hope of finding a grass more suitable for winter golf greens than rye grass has been in the past.

These experimental plots are located next to the Zaun Equipment Co. display room, 1090 Edgewood Avenue, Jacksonville, Fla. In the accompanying illustration Zaun is explaining some of the fine points of these grasses to A. R. Jackson, Supt. of the San Jose CC. The grasses in various plots are in plots 1 and 2, Zaun Bermuda, a discovery of his own which is the finest texture of Bermuda he says he has seen; in plot 1 is Zaun Bermuda and Astoria Bent seeded in for winter greens.

In plot 2 is Zaun Bermuda seeded in Illahee Fescue for winter putting.

Plot 3, a discovery of D. A. Hall of Savannah, Ga., shows the Hall Bermuda which has been in use on the Savannah course for years. It is a very fine strand of Bermuda deep rooted dense turf and practically frost resistant. This plot is seeded in Highland Bent for winter greens.

Plot 4 contains the Tifton Agricultural Experiment station East Lake Bermuda grass, an exceptionally fine texture of Bermuda. This plot is seeded in Seaside Bent grass for winter putting greens.

Plot 5 is a complete seeding of Illahee Fescue with no Bermuda base. Zaun says you will hear a great deal about Illahee Fescue for greens and fairways in the south and he is expecting some very fine results from this experiment.

Plot 6 contains Tifton 57 Bermuda, also developed by the Tifton Station. It is a very dense deep-rooted strand of Bermuda showing great possibilities. This plot is seeded in rye for winter putting green surface.

Plot 7 also is Tifton 57 Bermuda. It is seeded in Kentucky Blue Grass and Red Top for winter putting green surface.

These experimental plots have received much attention from golf course people. Zaun extends an invitation to all who are interested in fine turf to visit these plots at any time. He gives all inquirers full details of how these grasses have been cared for when and how planted, soil condition, fertilization, watering, etc.

### BURGETT LINE FOR 1950

The K. L. Burgett Co., Peoria, Ill., are offering to pros this year what they believe to be the finest line of gloves in their many years of specialized golf glove pro-

duction. Illustrated in the 1950 Burgett line-up are:

A3, Parlon—short fingers, elastic wrist, capeskin front with back part nylon, in colors. B2, Par-D-Lux—full fingers, all leather, lightweight selected capeskins, in red and tan. A2, Parglov—short fingers, adjustable fastener wrist, capeskin front, chamois back. G3W, Pargrip—short fingers, adjustable fastener wrist with Snug-tex gripper strip across palm, capeskin

front, chamois back. 37E—cream colored horsehide Parhoods. Sets of three, four or five; colored Poplin and Tackle Twill. No. 43, Strap Pad—soft, lightweight shearling; slips over bag strap. B3, Par-reel—full fingers, elastic wrist and back. Extra-thin capeskin front with back part nylon, in color combinations. No. 41, Shag Bag, of heavy white duck, leather reinforcing and riveted construction. Zipper and name tag; holds 150 shags.
