

**Sweeping the Nation!! Professionals everywhere agree—the most revolutionary improvement in irons in years, is the**

# **NEW Top-Notch DYN-A-WEIGHT Blade**

**TWICE the power-hitting area with DYN-A-WEIGHT**

**A** Conventional club power-hitting area

In conventional irons the effective power-hitting area is confined to approximately one half of the blade.

**B** New Dyna-Weight power-hitting area

In the new Dyna-Weight blade the entire face is an effective power-hitting area giving more power and more distance.

## **Make your own test**

The Wilson DYN-A-WEIGHT blade is an entirely new achievement in scientific weight distribution. Don't confuse it with a mere design or fancy back. Its appearance comes from the way the weight is placed. The whole face of the blade is effective power-hitting area instead of only half the face.

This means more power and distance. More and longer on-line shots, fewer off-line shots. Prove this to yourself. Hit a dozen balls with the new DYN-A-WEIGHT. Make your own test. You'll agree that DYN-A-BLADE is the nearest approach to the ideal, fool-proof iron that has ever been produced.

**ALSO AVAILABLE** in models for the better women golfers . . . and for lighter hitting men players.
