JONES MOWER & EQUIPMENT CO.
2418 Grasslyn Avenue, Havertown, Pa.

We pay the postage on all orders of \$15.00 and over.

New Style Caster Wheel Makes Adjustments Easier

A new style caster wheel built into the Wood M-80 Rotary Mower-Shredder makes it possible to adjust mower cutting height in a mat-

ter of seconds by loosening a single nut, moving the wheel up or down and re-tightening the nut. The wheel swivels 360 degs., has a non-pneumatic puncture-proof tire and is equipped with Timken bearings. It can be used with all Wood tractor-mounted models

with 61-in. and 80-in. cutting swaths.

A catalog describing use of the wheel on latest models can be obtained upon request from Wood Bros. Mfg. Co., Oregon, Ill.

Walter J. Wood Joins Plymouth Golf Ball Co.

Walter J. Wood, known for years in local golfing and golf sales circles as the "old pro," has been named assistant sales manager of Plymouth Golf Ball Co., Plymouth Meeting, Pa., Pres. James Hogg has announced.

Wood, an expert in the sale and distribution of golf equipment, represented A. G. Spalding & Bros., Inc., for 43 years in pro golf sales in the Middle Atlantic States.

Plymouth's new assistant sales manager has been close to the game most of his life. Following its organization in 1916, Wood was made first secretary of the Philadelphia section of the PGA. Many remember him as the pro of Plymouth Country Club.

Grau on Turfgrass

(Continued from page 87)

the soil. This reduces the chances for diseases to spread. The 'dew' contains dissolved nutrients which are helpful to disease. This recommendation of early morning watering was developed in the early 1930's by Monteith and Dahl on putting greens on the old Bannockburn course.

The exception to this recommendation is mid-afternoon "syringing" or "showering off" when grass starts to wilt during high temperatures, even when the soil is wet.

Q—What damages would you expect in the summertime if golfers use the tees and greens during the month of March when the ground is soggy and wet? (N. Y.)

A—Summertime damage resulting from March play could be severe or negligible depending upon the follow-up treatment in April and May. It is not always possible to close the course when the soil is wet. Some tees and greens are wetter than others, even when the course is open and on these the damage is likely to be more severe.

If the members insist on playing and if the chairman agrees and overrides your veto, be sure to explain in writing that there will be some very necessary interrup-

tions to play in April and May. At this time, in order to repair the damage done by a few players in March, you will have to temporarily close to play a green or a tee at a time while you thoroughly aerify, verti-cut, fertilize, topdress, plug, sod, seed, sprig — or whatever else is needed — to restore good playing surfaces for the summer.

Players, caddies, and carts leave dents and ruts in soft turf. Roots are shallow in early spring and turf may actually slide when walked upon. This disturbed sod may die if dry weather follows.

Some of the soggy wetness may be a good indication of the need for drainage — maybe you have seepage. The sooner it is located and corrected the better.

Q—What causes velvet bent greens to appear chlorotic until very late in the spring? (Conn.)

A—Several factors might be involved. Excessive amount of water might be the cause. A badly matted condition could do it. Cold, cloudy weather retards growth and color. Or, an excess of phosphorus, a deficiency of iron or some other factor might be involved. Regardless of cause, the best way to correct the condition is with regular applications of soluble iron. Iron sulfate often is used. Chelated iron is another recommended material.

Take one look! Hit one shot!

Here's new plus-power you can train in with gun barrel accuracy. Here's a new Fluid Feel unlike anything you've ever known. Here's an iron lighter in over-all weight yet with more "head feel" which permits better hand action.

ANNOUNCING **Wilson Dyna-Powered Irons** the new magic wands of golf

There's never been an iron like this! By drilling through the neck and inserting the shaft all the way through to the sole, we have by far the strongest union of head and shaft ever devised. And in removing unnecessary weight from the neck and redistributing it throughout the blade, we've produced a more delicate balance.

The results to you? Virtually no vibration up the shaft. No head shimmy. No quitting at the moment of contact. An iron you can swing faster without swinging harder. An iron you can time better. Greater

club-head speed, greater distance, greater accuracy and a magnificent new Fluid Feel.

But don't take our word. Discover the Dyna-Powered difference firsthand, the next time your Wilson salesman calls.

Wilson

The Wilson name is part of the game
