TURF that Speaks for Itself!

Incomparable Greens are a Flaherty Trademark at Manasquan River Golf Club

Mr. Joseph E. Flaherty is noted for fine putting greens in an area where both heat and humidity reach extremes. Manasquan River Golf Club is located near the Atlantic Coastline in New Jersey. Even during the height of last year's drought the greens and tees were in tip-top shape. Joe believes in watchfulness. He keeps ahead of disease and insects and favors a bland MILORGANITE diet for the grass. He credits it with keeping down wilt and disease. Joe uses several tons of Milorganite each year.

If you have a turf problem, consult: Turf Service Bureau

Joe Flaherty points out with pride the turf quality at Manasquan River Golf Club.

SEPTEMBER

is TURFGRASS

No Fairway Need Look Like This

The photo above was not, of course, taken on your course. You know that the time to renovate comes long before a fairway or green is allowed to get in such bad shape. That's why so many modern Superintendents like you are making plans now to renovate turf areas in September. They agree with Professor Eliot C. Roberts of the University of Massachusetts who says, "With use of sports turf what it is today, renovation and rejuvenation is a must."

Because of the universal interest in fall renovation, West Point has recently prepared a 60 page Bulletin "Fall Renovation for Greens and Fairways." Jam-packed with helpful and handy information, it covers such topics as "Analyzing Turfgrass Problems," "Principles of Aeration," and "Principles of Verti-Cutting." It discusses renovation methods now being followed on fairways and greens throughout this hemisphere.

Send for your free copy NOW.

RENOVATION MONTH

Agronomists from Coast-to-Coast Agree

Prof. H. B. Musser
Pennsylvania State University

"This is the most logical period for renovation. Growing conditions are favorable. Weed competition is much less severe. It permits a better distribution of labor."

Dr. William H. Daniel
Purdue University

"Fall renovation on cool season grasses certainly is in order. Renovation, including intense aerification, should be accomplished early enough so that turf heals for best winter cover."

Dr. Wayne W. Huffine
Oklahoma State University

"In our area, just as elsewhere in this country, our turf receives its hardest wear and abuse from early spring through the summer months. Aerification in the fall is a sound management."

Dr. Roy Goss
State College of Washington

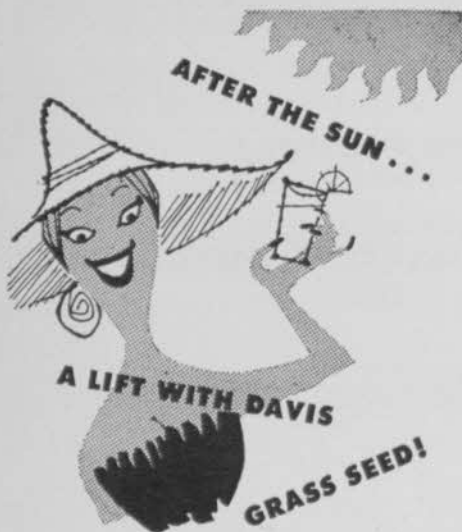

"Advantages of fall renovation include (1) less demand for the turf, (2) can switch to temporary greens, (3) allows better re-establishment of the grass, (4) less chance for weed establishment."

Three-month report by Illinois driving range operator on new Worthington paintless range ball:

"...no notice of any wear!"

Three months of continuous use of a 2,000-dozen "trial" order proved the profit potential of his new paintless golf balls to this range operator.

His letter goes on to say that these new paintless balls are "much more durable, require no painting, stay much whiter and are highly acceptable to our customers."

Yes, Worthington's new paintless range ball is built to really take it—and to save you money. It's promptly available with the name of your range and red or blue stripes permanently dyed into the paintless cover. For all the facts, see your local Worthington Representative, or write us. Now is the time to order for your 1959 requirements.
