

You're Way Ahead with SUPER REEL

A **half-hour** is all it takes to aerify a green with a G-L or Junior G-L Aerifier* equipped with SUPER REEL. Power-on-the-reel drives the Aerifier at a brisk, time-saving pace . . . as it provides maximum cultivation with a minimum of surface disturbance.

You get **four-way** aerification in one operation with SUPER REEL because it has so many more holes per square foot. Important, too, is the easy depth adjustment which allows you to select the hole depth **you** want for **your** greens.

Quicker healing, more versatility, lower cost — all this is yours when you get SUPER REEL. Your West Point Products distributor will be pleased to arrange a demonstration for you. If you wish, this can be arranged through West Point Products Corporation, West Point, Penna.

*Reg. U.S. Pat. Off.

With SUPER REEL you can aerify the all-important collars and approaches.

No need to load your G-L or Junior G-L on truck or trailer because of the power-on-the-wheels which drives the Aerifier at a brisk, time-saving pace.

a perfect answer for SCORECARDS

Ask
Your
Dealer

- Size: 11¼" x 10" x 3".
- Machined from heavy gauge steel.
- Self-closing cover on piano hinge.
- Rust-proof enamel finish.
- Tight, weatherproof construction.
- Threaded pipe flange for easy mounting.
- Holds 300 men's, 300 ladies' cards, 2 gross pencils.

This SCORECARD BOX® is a brand new idea in golfing convenience . . . keeps scorecards and plenty of pencils handy right on the tee. Speeds play on busy days because golfers help themselves. Put one of these bright red and yellow reminders on the 1st and 10th tees — and perhaps on the 2nd for "forgetters."

Frees pro and his helpers of scorecard bother . . . a minute to fill, no maintenance . . . Easy to install — screw threaded flange into 2-inch pipe and lock with cotter pin. Originally designed by Harold Seig, pro at the Golden Valley Golf Club, Minneapolis, Minn. Now available to you.

WORTHINGTON SALUTES -

THE TWO MEN

GOLF

WORTHINGTON MOWER COMPANY

WHO MAKE POSSIBLE *a la car!*

The Course Superintendent and The Golf Pro!

These two men, the first to recognize the possibility and pleasure of golf car play, rate a salute from us all! Working from dawn to dusk for better golf, both want to be sure that the golf cars used on their courses do not undo this fine work.

For over 45 years Worthington has built tractors and gang mowers to help make course maintenance better and easier. That's why the Worthington Champ Golf Car, *built with all of Worthington's grass maintenance "know-how"*,

is the car that's being recommended by more and more Pros and Superintendents.

The Worthington Champ has a low center-of-gravity for maximum player safety, ample ground clearance and big, low-pressure turf-type tires for excellent traction and high flotation on the turf. It's a car that *pampers the course* they work so hard to keep at peak condition! Write today for Worthington Champ sales or rental plan information.

The most complete line of large-area grass maintenance equipment in the world!

Grau's Answers

(Continued from page 66)

green is usable, add sand, coarse sand of course, and some clay loam soil, if it is indicated, to the mixture so that when thoroughly blended you have a sandy loam type of soil with about 8-10% of clay and 60-70% of coarse sand. This would be my guide for preparing the soil before replacing it over an adequate drainage system; 10-12 inches of this mixture, preferably 12, loose measure, should be replaced and thoroughly settled before replacing sod. Some supts. actually tread the green to be sure that the soil is firm and to avoid settling and creation of pockets after the sod has been replaced.

By all means, incorporate whatever limestone is indicated by the test, plus a generous amount of a complete fertilizer, preferably one containing slow-release nitrogen for the benefit of the sod when it is replaced.

Finding Qualified Men

Q. Our club recently purchased a 9-hole course and expects to operate it on a daily fee basis. None of us has had any technical experience in the operation or maintenance of a course and we need capable and conscientious men to perform the necessary work.

Is there any standard wage scale or man-hour and manpower averages which we may apply in order to obtain satisfactory results? We would be happy to receive or subscribe to any literature which might be helpful to us in this new venture. There seems to be a scarcity of qualified persons and the former owner, who did all the work practically single-handed, is not available. (New York)

A. I suggest, first, that you locate and retain a qualified supt. to operate the course and to keep it in tip-top condition so that it will attract players.

I know of no standard wage scale or averages that you could apply in order to obtain satisfactory results. It will be necessary for you to pay the supt. a salary and other benefits that will attract the kind of man that will give you the kind of course you want. As far as labor on the course is concerned, it will be necessary to meet the wage scale of local industry.

Poa Annua in Bentgrass

Q. What will kill Poa Annua without hurting bentgrass? (Texas)

A. There is nothing we can recommend that will kill poa annua and not hurt the bentgrass. Arsenate of lead is one of the better materials to use to discourage poa annua gradually. The rate of application is 10 lbs. to 1,000 sq. ft. applied early in the spring and repeated once or twice a year until results are achieved.

It would help if I knew first, what kind of grass you have on the greens; second, the kind of soil in the greens and also the drainage and, third, your fertilizer and watering practices. With a description of these factors a better diagnosis could be made.

Clover in Greens

Q. Last year our greens were wonderful until late Sept. when I noticed an abundance of clover patches show up. I was told our greens needed lime, but I thought lime would encourage clover. I treated most of the summer with fungicides, fertilized with natural organic and top-dressed with a rich peat moss soil twice last year.

Please advise if you know what I can do to discourage clover. We had our greens tested in early spring and they tested on three different greens — 6.7, 6.9 and 7.0. I felt that the latter two were O. K. for pH. Would you suggest agricultural limestone in this matter or something else? We have several different types of bent due to so many changes in supts. and commitments, so I cannot tell exactly what types we have the most of. (Ohio)

A. I disagree with the person who told you that you need lime. The pH values which you quote are O. K. — no lime for the present.

Clover invades because — (1) the clover is there, (2) competition from the grass is not there. Some of the grasses in your greens may be "weak sisters" that just naturally get thin in the summer. There may have been some disease that was not checked in time and the weakened grass let the clover in.

Now that you have the clover, I would suggest that you eliminate it soon as possible with Brushkiller, a mixture of 2,4-D and 2,4,5-T. Use it at ½ the rate recommended for clover control on fairways. Repeat as needed.

Only *Genuine Leather*
has the feel-of-the shot
for the sure hit!

From start to finish . . . the golf shot depends upon the grip. Every demand of every shot is transmitted by the hands through this solitary point of contact with the club.

For the live feel of responsiveness at the vital point of control . . . for the confident feel-of-the-shot that utilizes the distinctive playing qualities of each club . . . genuine leather grips are without equal.

Because so much of every club's performance depends so much on its grip . . . America's foremost club makers depend upon the specialized craftsmanship that produces golf's finest grips —

USCOFLOW PLASTIC PIPE

Golf is taking to this plastic pipe

Here's why: UscoFlow plastic pipe is trouble-free irrigation pipe — low in installation cost and requires virtually no maintenance. In the photo at right you see UscoFlow in 31-ft lengths being handled and installed* easily by only two men. The pipe is rigid enough to resist soil pressure, yet flexible enough to follow earth contours.

UscoFlow is completely corrosion-resistant inside and out, prevents build-up of scale and deposits, hence maintains its high flow rate indefinitely. *This is the pipe that has removed the high-cost barrier in golf course irrigation.*
