34th Year

February, 1960

Bill Hook (left foreground) and Leo O'Grady, teaching instructors at the PGA Business School (see page 30), demonstrate for a group of avid young assistants who spent a week in Clearwater, Fla., in early January learning some of the secrets of the golf professional's business. In the photo are (front row, l to r): John Kerr, Toronto; Henri Chatalin, Hamilton, Ont.; Ryutaro Adachi, Tokyo; Gene Moyer, Macungie, Pa.; Gene Rolfe, St. Louis; and Norris Denno, Toledo. (Second row) Joe Bonadio, Pittsburgh; Jim Netter, Pt. Huron, Mich.; Fred Kern, Toronto; Allen Johnson, Conway, Ark.; Bob Donaldson, Charlotte, N. C.; and Joe Brannon, Dallas.

Golfdom is published monthly except Nov. and Dec. at Rochelle, Ill. Acceptance under Section 34-64, P.L.&R. Authorized. Please address all advertising, circulation & editorial correspondence to GOLFDOM, 407 S. Dearborn St., Chicago 5.

AQUA-GRO®

A Blend of Non-Ionic Organic Soil Wetting Agents

During 1959, one of the most severe years in turf history, a number of superintendents in areas with adverse weather conditions, produced a turf that was denser, more disease resistant, better rooted, and, in addition, did not wilt. This turf was grown consistently under low soil-moisture-tensions, using AQUA-GRO. During 1959 these courses had more play than ever before, yet their greens proved to be better than ever.

These results were not obtained over night. Each of these superintendents followed this general program (see September, 1959, *Golfdom*):

1. Every year apply a total of 24 to 32 ounces of AQUA-GRO per 1,000 sq. ft. Each application should be at the rate of 8 oz. per 1,000 sq. ft.
2. Under severe conditions apply 8 oz. per 1,000 sq. ft. at monthly intervals during the season.
3. To promote deeper rooting make both an early spring and fall application.
4. For maximum performance keep this program on schedule.

These rates of application are based on using a blend of non-ionic wetting agents, that is 100% active ingredients — AQUA-GRO. The average cost for all greens, collars, and tees on an 18 hole course was less than \$450 per year. These results certainly warrant your own individual investigation. Choose a portion of your course and find out for yourself!

Aquatrols Corporation of America

217 Atlantic Avenue, Camden, New Jersey

architect of new course in Big Spring (Tex.) CC which, with fine new clubhouse, will be opened this year . . . C. Hunter Jones is pres., Hanover CC, Inc., which will build 9-hole course near Ashland, Va.

Tom Farley leaves Winged Foot GC, Mamaroneck, N. Y., to become gen. mgr., Baltimore CC and is succeeded as Winged Foot's mgr. by Robert Farrell Carney, for previous eight years, mgr., Larchmont Yacht Club . . . Covington CC, New Orleans, adding 9 holes . . . Hart Hatchett now mgr., Rochester (Minn.) G&CC.

Phil Farina and Eddie Quirk, operators of Wayland (Mass.) CC, have bought South Shore CC, Hingham, Mass. . . Forest Lake CC, 4 miles east of Greensboro, N. C., to build 9-hole course . . . J. Kenneth Lee, Greensboro attorney and one of the 9 stockholders who paid \$90,000 for club property, expresses confidence the club soon will become the best Negro golf club in the world.

Richard Connolly, leaves Hillview CC to become gen. mgr., Charles River CC (Boston dist.) . . . W. Clayton Lemon is pres., Airport GC, Roanoke, Va., which expects to have 9-hole course in play by early summer.

Two veteran pros, who made conspicuous successes in course maintenance after their playing days, were lost when Walter Grego and Willie Ogg died recently . . . Grego was one of the founders of the Long Island PGA . . . He started at

Irrigating your golf course?

HOW MUCH SHOULD YOU KNOW ABOUT WATER SYSTEMS?

Q Are you building in trouble spots?

A Naturally, you want good, soft turf on your fairways—to provide good lies, and not to build in unwanted hazards. This assurance is yours with an irrigation system of cast iron pipe—because a cast iron pipe system will be free of repair and replacement year after year, keeping your course free of trouble spots.

Q What should you look for in an irrigation system?

A The same things you look for when you're about to purchase a car: economy, long life, freedom from worry. You don't always buy the cheapest car—because the cheapest car doesn't always give you the things you want. The same applies to piping systems. Again cast iron pipe supplies the best answer: a steady flow of water—always . . . plus freedom from worry over tearing up your course to repair or replace the piping system.

Q How can you find out about pipe from someone who really knows?

A First you have to ask yourself, "Who are the biggest buyers of pipe?" The answer: those who buy pipe for city water distribution systems. And in our 50 largest cities, over 90% of all the pipe in use is cast iron pipe. Couple this with the fact that 110 American utilities have been using cast iron pipe for over 100 years, and you can see why cast iron pipe is justly called America's greatest water carrier.

esting and pretty . . . All seem to provide fun for their players and increase the golf market.

Graham Webb building 9-hole pay-play course at Chesterfield in suburban Richmond, Va. . . . Building 18 to design of James G. Harrison for Sewickley Heights CC in suburban Pittsburgh as part of residential development . . . John M. Brennan, Long Island golf writer, is campaigning for new public course in Bayside-Douglaston area of NY Met district . . . John points out that with North Hills, at Douglaston, and Oakland, at Bayside, doomed within the next two years, the present acute shortage of golf facilities will be accentuated.

Hunter Air Force Base, near Savannah, Ga., to have 9-hole course . . . Herb A. Davis, Cincinnati recreation director, says city needs 9-hole course in western section . . . Tells city's Finance committee that 9-hole course is most popular because many players go to Reeves munny course after work to play 9 before dark.

Course to be built in Estrella Park in Avondale-Goodyear-Litchfield Park area of Arizona . . . Madrid, Ia., to build course . . . Robert Trent Jones designs

Precision Soil Shredding Costs You Less: Here's Why

LESS HORSEPOWER. You save on original cost and operating expense with LINDIG Model B Soil Shredders because patented dual shredder assembly is matched precisely to horsepower requirement. Proper operating efficiency produces more cubic yards of shredded material per hour for less horsepower.

HIGHER QUALITY SOIL MATERIALS. This same exclusive shredder assembly produces fine, even-textured materials that are well aerated and include all the valuable manures and other humus for vigorous plant growth.

REJECTS FOREIGN OBJECTS. Spring-mounted stationary blades allow stones and other non-shredding materials to pass through, protecting the blades and rotor from damage.

Thousands of LINDIG Model B Shredders are providing trouble-free operation for nursery and greenhouse operators and growers throughout the industry. Added versatility is created by optional screening attachments and hopper extensions. Model B capacities range from 3 to 25 cu. yds. per hr. Optional gas or electric power units.

Get complete details on low cost power shredding with LINDIG Soil Shredders. See your local dealer or write us.
