THE
PRE-PLANNED
COMMUNITY:
**GOLF'S
NEW
LAND
OF OPPORTUNITY**

by JERRY A. OLSON ASSOCIATE EDITOR

Golf courses at residential communities offer superintendents, professionals and managers greater fringe benefits. In this second of a two-part series, GOLFDOM examines the advantages and the disadvantages of working at these courses

Competent superintendents, professionals and managers are scarce, and if found, are generally rewarded by the club and given an opportunity to perform. Pre-planned community golf courses, however, suffer the image of offering low wages and strangling control on their golf course administrators.

This reputation is good and bad. Good—for club managers, superintendents and professionals, because their skepticism forces them to scrutinize the practices and policies of a land developer before accepting a position. Bad—for the land developer interested in attracting top caliber personnel and willing to pay for them. He has to overcome an image problem.

In the first part of this series presented in May (p. 64), GOLFDOM examined the land developer's point of view on the relationship of the golf course to the entire development. In this part, GOLFDOM examines the salaries, fringe benefits as well as the types of working relationships that superintendents, club managers and professionals can expect to encounter with the developer, with each other and with their memberships.

We might have looked solely at the Innisbrooks, Inverrarys and Deerwoods, developments backed by substantial financial outlays from large corporations that cater

Donald Davis, top photo, left, vice president, The Deerwood Club, discusses golf shop inventory with professional Manuel Pope. Pictured in the bottom photographs, left to right, are: William Lewis, director, Golf & Recreation Associates, Ellie Spinnell, manager, Gulf Gate, and William Schoenfeld, superintendent, Killearn.

to the life style of the upper crest of society—and we did. The large developments can be generally classified as non-risk types for club officials, because they are operated similarly to large successful country clubs. The risk type (from an employment and opportunity standpoint) are also looking to attract superintendents, professionals and club managers. Here is a sampling of some of the advantages and disadvantages the three club officials have observed at land development golf courses.

CLUB MANAGERS

The club manager has a tremendous opportunity to expand his position at a land development golf course. He can remain as a clubhouse manager, or if the situation changes and he is qualified, he can move up to general manager of the total golf facility. At a medium-sized development, about 1,000 to 3,000 acres and with a golf membership the size of a small country club, there will generally be only three administrators. An executive of the company building the development usually has the responsibility of coordinating the operations of the golf course with the rest of the development. He serves either as a general manager of the golf course or he may serve as a liaison between the course and the developer and appoint a member from the management team to be responsible for the course's over-all operation.

Ken Creely, president of the country club and recreational developments at Killearn Estates, Tallahassee, Fla., discusses opportunities for club managers at land developments: "I was a club manager at Cherokee CC, Knoxville, Tenn.," Creely says. "I received an opportunity to become general manager at the Killearn G&CC and recognized this as an opportunity for not only financial, but professional advancement. After proving to the developer that I was capable of handling my initial duties, I was given greater responsibilities in over-all recreation management within the company. As the development became successful," Creely says, "additional positions opened up, not only for the manager, but for the

superintendent and professional as well."

Ellie Spinnell, manager of the Gulf Gate GC, Sarasota, Fla., has also benefited professionally from the management opportunities at pre-planned community golf courses. Initially a waitress at a club, she was given more responsibilities as her management abilities increased. Soon she was handling everything from public relations to bookkeeping and accounting. She received her first head managerial position at Gulf Gate, a private executive course.

The course is one of four executive courses managed by Golf and Recreation Associates Div. of First Development Corp.

"There are many opportunities in pre-planned community golf courses, both regulation and executive, for club managers and women," Ms. Spinnell says. "I was given the opportunity to use the knowledge I had acquired over the years working in clubs, and it has paid off for me."

"It has also paid off for FDC," William Lewis, vice president of FDC and director of Golf and Recreation Associates, says. "We offer a training ground for young club managers and assistants and then provide a program of upward mobility for them after they have attained greater managerial skills. For example," Lewis continues, "an assistant manager, professional or superintendent, or one with limited skills, may start at one of our executive courses. Our division builds and manages golf courses, both for ourselves and our parent corporation U.S. Home (which has 21 other divisions in addition to FDC), and other land developers. We also supply these facilities with trained personnel to staff these courses. As a person's skills increase, he may be transferred from an executive to a regulation course or be in charge of several executive courses."

Pay for club managers at most land development golf courses is comparable to that at country clubs. If the manager is in charge of the clubhouse only, salaries range from \$11,000 to \$15,000, depending, of course, on the size of the development and his responsi-

NEW CUSHMAN® TURF CARE SYSTEM CUTS EQUIPMENT COSTS 35%...LABOR COSTS 50%.

The Cushman Turf Care System is a hard-working package of vehicles and turf care accessories.

You save on initial purchase costs because instead of buying separate items of equipment, each with its own engine, tires and individual maintenance problems, you buy vehicles and a group of high performance accessories that will handle turf maintenance chores using the **vehicle's engine** both for power and for transportation. Labor costs go down as much as 50% because these Cushman accessories are designed to work faster, do a better job (for instance, with the system you can now

spike 18 greens in less than 2½ hours). And man-hours aren't wasted in walking. Maintenance costs go way down too, for you have Cushman quality and **less equipment to maintain.**

Cushman Motors and its nation-wide network of dealers stands behind each item in the system. Your best assurance of good service after the sale.

Make us prove what we say. Mail us this coupon today.

Cushman Motors is a Division of Outboard Marine Corporation, makers of Johnson and Evinrude powered products.

THE POPULAR TURF-TRUCKSTER

The highly successful work truck designed for turf. Your choice of 3 or 4 wheel models with 8.50 x 8 Terra Tires that can go anywhere without damage to turf, even in damp weather. And only the Turf-Truckster offers a hefty 18hp engine and power take off. Why buy and maintain many separate engines, when a Turf-Truckster with PTO can power and haul all these Cushman accessories as well as mowers and many other types of equipment?

NEW...Top Dresser For use with wide-box Turf-Truckster. Mounts in 3-4 minutes. Operated by power take off. No separate engine or tires to buy and maintain. Moving bed spreads dry or moist material. Rotating brush forces dressing downward in an even 36" pattern. Turf-Truckster has engine and ground-speed governor control for precise spreading rates. Saves time on the green and travels between greens 4 to 5 times faster than self-powered units.

NEW...Greens Spiker Spikes a 57-inch swath. Twice as wide as others. Aerates to 2½" depth on 1¾" centers. Turf guard fingers leave greens undamaged, ready for play. Operator raises or lowers unit from his seat with simple mechanical device. Travels between greens quickly with no loading or unloading. Up to 150 lbs. of weight can be added easily for hard packed soils.

NEW 8HP MINUTE-MISER

Now available with one-third more power for transporting supervisors and workmen and for towing ball pickers or the new low-bed utility trailer. Makes it possible for men to do much more work in much less time. Easy riding, easy to drive, easy on the turf with its fat 6.50 x 8 turf tires. The Minute-Miser has a new, powerful 8hp gas engine, yet is still competitive in cost with other vehicles offering far fewer quality features.

NEW...Low-Bed Utility Trailer Economical but rugged low-bed trailer with fat, turf pampering tires. 35" x 66" bed. Easily carries two hand mowers, tools or up to 250 lbs. of chemicals, trash containers or other equipment.

A covered cargo box for hand tools and light equipment is available, and the Minute-Miser can be fitted with an extra seat to make it a two-passenger vehicle. Headlight, taillight and horn are standard.

New, 8 hp. Minute-Miser

Fairway and Greens Sprayers High-capacity centrifugal pump powered by Turf-Truckster power take off. Spray boom, tank, hoses and other accessories go on and off as a unit in seconds. All components corrosion resistant. Spray calibration control so precise that chemical wastage due to overlapping or careless application is virtually eliminated. Can cut chemical costs 25%. A handgun for tree spraying is standard equipment.

Dump Bodies The big-box model (57" x 53" box) is available with manual or hydraulic dumping mechanisms. Both have swinging tailgates controlled from the operator's seat for metered dumping. Ideal for top dressing large areas or carrying refuse or soil. The hydraulic mechanism is powered from the PTO. The big box can easily carry up to 1000 lbs. of equipment or materials.

Cyclone Spreader This wide-area spreader is operated from the PTO and can be mounted in seconds. Holds up to 3 bushels of grass seed, fertilizer or other materials. Spread varies up to 40' depending on material and speed of operation.

PRE-PLANNED from page 53

bilities. For the general manager in charge of the total golf complex, salary ranges average from \$14,000 to \$25,000. Additional benefits for club managers generally include company-paid family hospitalization and major medical coverage, stock options and purchase plans in the company and also discounts on investments in land at the land development.

At non-regulation courses salaries are naturally lower, but fringe benefits are similar to large developments. However, a club manager may be in charge of running several non-regulation clubhouses in close proximity to each other.

The staff and budget of the clubhouse will vary greatly from development to development, depending on the emphasis they place on their dining facilities. Some developments actively compete with local area restaurants and try to attract the public. Other developments may have dining facilities for just members of the golf course and the development.

SUPERINTENDENTS

The pre-planned community offers the superintendents the most attractive prospects. He works for a profit-oriented, professionally-run company. They generally expect the golf course to be run the same way and hire the personnel to make it successful. The superintendent will generally have only one boss, either a general manager of the golf course or someone with the developer, not a club member. In most instances he will be allowed to work without interference from the company.

The average salary ranges for superintendents are from \$7,000 at non-regulation facilities to \$16,000 at regulation courses. If the superintendent oversees more than one course, then his salary is higher. Some superintendents, in addition to a regular salary from the land developer, also receive compensation from a homeowners association within the development. Most developments charge a monthly maintenance assessment. A portion of this may go to pay the superintendent for maintenance of curbs and right-of-ways throughout the development

(not lawns). Another advantage for superintendents at land developments is their access to additional men and heavy equipment. If he needs to meet some disaster on the golf course he can draw upon the construction crew and equipment (such as a bulldozer or tree spade) that are setting up homesites for the developer.

Benefits other than salary for the superintendent can include:

Rent-free house. One developer constructed a home on the golf course property especially for the superintendent.

Company-paid hospitalization and major medical for himself and his family, and life insurance.

Free vehicle, usually a truck for take-home transportation.

Stock options in the company.

Discounts on land purchases within the development.

For superintendent Mike Koss, Eaglehead G&CC, Lake Linganore, Md., pre-planned community golf courses are a two-sided coin. Koss was previously superintendent at another land development golf course that floundered. "At the previous course," Koss says, "our budget was totally inadequate for the degree of playability and quality which the developer expected. The superintendent was looked on as just a grass cutter. It soon became obvious to me and the other members of the management team that this development was not going to be successful because of their attitude toward the golf course and its personnel. It was a vicious cycle. We weren't given the money needed to maintain the course, consequently, the course had no hope of becoming self-supporting.

"After this unfortunate experience," Koss continues, "I was very careful in examining job opportunities at land development golf courses. This skepticism enabled me to examine the management philosophies of Eaglehead G&CC and the developer William Brosius, president of the Linganore Corp."

"Because the development is profit-oriented and the golf course must be self-supporting, the emphasis by the developer is on communications, both with himself and the other members of the management team," Barney Orr, super-

intendent at The Deerwood Club, Jacksonville, Fla., says. "Superintendents must be attuned to the problems of the other administrators. I ride the course on Tuesday and Friday mornings with golf professional Manuel Pope. He is able to give suggestions from a golf professional's viewpoint on current and potential problems, and I can give him feedback on any problems I have encountered."

There are bad land developments, just as there are bad country clubs, so the picture is not 100 per cent rosy.

Problems superintendents may face include poor communications with the other club administrators or the developer. There may be fluctuating maintenance budgets, because if the course loses money, the difference must come from the developer's pocket, not from assessments on members. Members may try to form green committees with more than just a liaison in mind.

One surprising instance uncovered while researching this article occurred at one reputable development. The superintendent received a very rewarding salary, had excellent fringe benefits and good working relationships with the other administrators and the developer. But he was barred from playing golf on the course he had to maintain. The explanation went something like, "What would our members think?"

GOLF PROFESSIONALS

The rewards of working at pre-planned community golf courses can also be received by golf professionals. However, professionals are usually the most reluctant of any of the management team to accept positions at these courses. Members at some developments have not supported the golf shop with the revenues the professional needs to make a living. Golf courses associated with retirement communities, with people on fixed incomes, have produced a modest lesson income, but almost no income from equipment or soft goods. There are also other recreational and social pursuits, so golf may not be the essential reason for living in the community.

Goodyear's new golf car tire treads lightly

Puts less pressure on the turf than your heel.

It's a new golf car tire with a soft touch. The Goodyear Rib Terra-Tire low pressure tire. It has a wide tread to spread the load evenly. This means less turf damage. For even with a fully loaded car, pressure is only 10 pounds per square inch compared to the 24 pounds a man's heel can exert.

The new tread design also gives you positive traction. Carcass flexibility and low inflation pressure make this tire an easy roller on soft

surfaces—which equals more miles per battery charge.

For full information on the new Rib Terra-Tire low pressure tire, write: Terra-Tire Dept., The Goodyear Tire & Rubber Company, Akron, Ohio 44316. TERRA-TIRE—T. M. The Goodyear Tire & Rubber Company, Akron, Ohio

PRE-PLANNED *from page 56*

recreational developments in which the emphasis is on "second homes" provide patronage of the golf shop sometimes only two months out of the year. If the golf course is in a beautiful new development, the course may lack the membership necessary to support a fully-stocked pro shop.

Here are several examples of the arrangements under which golf professionals at several land developments work.

Golf Professional A:

- Base salary of \$7,200.
 - Percentage of gross sales: No investment on the professionals' part. The company owns all of the stock in the pro shop, but the professional, working within a budget, orders merchandise for the shop.
 - Half of his lesson revenue.
 - Percentage of the monthly dues: This is an incentive for the golf professional to encourage monthly memberships.
 - Basic hospitalization and major medical furnished by the company. Insurance pays 100 per cent of first \$600, 80 per cent thereafter up to \$10,000.
 - Life insurance furnished by the company.
 - After a year of employment, the professional is eligible for profit sharing program.
 - Non-contributory retirement program.
 - All dues and expenses to PGA meetings paid by the company.
 - Entitled to clubhouse discounts and discounts on land purchases in the development.
- For the assistant professional: Base salary, half-lesson revenue, medical and hospitalization insurance, all paid by the company.

Golf Professional B:

- Base salary of \$7,200.
- Percentage of golf car rentals and driving range fees.
- Total bag storage fees.
- Percentage of lockers.
- Furnishes all merchandise and receives all revenue from merchandise sales.
- Stock option purchase plans with the company.
- All lesson revenue.
- Group health insurance.
- Percentage of revenue from new

memberships: Another incentive program to encourage professionals to attract new members.

- Company pays salaries of all assistant professionals needed by the professional;

Golf Professional C:

- Declining salary. Starts at \$10,000 and as income from lessons and merchandise increases, salary decreases to base of \$7,800.
- Must furnish all stock and receives all revenue from shop.
- Ten per cent of golf car revenue.
- All lesson revenue.
- Percentage of driving range. The assistant is paid by the company. The assistant receives a percentage of his pro shop sales from the head professional. This is an incentive program for the assistant to increase golf shop sales.

In some infant operations, where the professional may have a difficult time at the outset, the declining salary structure is an attractive guarantee. Additionally, one developer offers the professional a guaranteed wage—\$16,500. If the net profit of the golf professional at year's end is \$13,500, the company pays the professional \$3,000. This protects the professional from financial ruin if weather, or a delay in opening the course, leave him with a substantial year-end inventory.

Professional Mike McGinnis, Eaglehead G&CC, has fought an uphill battle, which may be eased now that construction of a new \$125,000 clubhouse and pro shop has just been completed.

"The golf professional is the public relations man for the entire development," McGinnis says. "This is why developers put strong emphasis on solid club professionals rather than big-name touring pros. It is very hard to sell memberships, initially," he says. "It is up to the professional to get the members, and he is usually rewarded by the developer when he does. You have to have support from non-residents of the community. It will take a few years before the development is able to draw strictly from the lot and homeowners. Consequently, you have a membership made up of lot owners and non-lot owners, each wanting preferential treatment. To attract members I sent a

personal letter to known golfers in the area trying to alleviate their fears about the course being plowed under or poorly maintained."

Members of a pre-planned community golf course support the club, just the same as a country club member. One professional's monthly intake included: range balls—\$162; golf cars—\$6,115; apparel—\$1,400; golf balls—\$760; equipment—\$1,519, and green fees—\$3,701.

Joe Donadio, head professional at Killearn G&CC has great rapport with his members. "They have really supported the pro shop," he says. "They have a lot of tournaments and purchase all of the prizes from my shop. We have strong women's and junior program, and I offer golf clinics to generate enthusiasm." The members appear pleased. Last year they (not the company) paid for all expenses and sent him to Scotland and England.

We're not trying to make every land development golf course look like a Shangri-La. Working relationships and budgets are on an individual basis, just like at country clubs. Any club administrator going to a course with Cadillac tastes and a Volkswagen budget is destined to face problems.

However, as one club administrator put it, "Superintendents, professionals and club managers have little security in their fields. If they are capable and qualified, they will always be assured of a job as long as they are healthy. The wages may be good, but the fringe benefits are meager. As a result," he says, "they are job hopping looking for the club which pays the most money and offers the best benefits for the future. These new courses, residential communities with golf as part of a recreational amenity, are owned by large corporations with established employment and management practices. Even though they may be novices in the golf course field, they are way ahead of the golf industry in benefits."

And, as one superintendent says, "After working under the profit-oriented business management principles of a land development golf course, it is very hard to go back to the member-run avocational management system."

INSURE *from page 50*

may not cover the very peril which causes serious loss or damage to the club's equipment. The all risk floater covers every possible peril. The exceptions are certain basic perils usually excluded from every policy because they are insured by other basic policies, or because the particular peril is uninsurable.

Again, it is recommended that the subrogation clause be removed, if possible, against authorized club personnel for most losses.

Many officials at country clubs think that all risk coverage on equipment is too expensive. Frequently, insurance underwriters grant a marked reduction in the premium if the country club accepts a deductible clause similar to the \$100 deductible that most automobile insureds accept when purchasing collision insurance. This eliminates the claims cost involved in handling small losses. Consequently the underwriters are willing to pass the cost savings on to the insurance buyers.

Before accepting a deductible a country club should know whether the deductible applies on a "per occurrence" basis or a per item basis. If a severe windstorm, for example, damaged many items of equipment, the club would want the deductible to apply only once to all the items damaged in the windstorm, and not to apply separately to each item.

Every country must understand clearly the terms of the deductible before it is attached to the policy.

Next month, we will explore more phases of property insurance to help GOLFDOM readers find other areas in which the insurance coverage may fall short of the coverage that should be carried. □

QUESTOR SALES EARNINGS UP

TOLEDO, OHIO—*Questor Corp.*, the parent company of Spalding, reports net sales for 1971 were up over \$23 million from 1970. Sales in 1971 were \$286,359,000 as opposed to \$263,986,000 in 1970.

Spalding, which is one of the principal product groups of Questor, reported sales up 12 per cent from 1970. Sales reached \$77,475,000 for Spalding last year as opposed to \$69,180,000 in 1970.

Sales for Questor for the first quarter of 1972, ending March 31, rose 15 per cent from the same period in 1971. Sales were \$75,715,000 as compared to \$65,532,000 for the same period in 1971.

TORO EXPANDS EEC; DROPS LANDSCAPING

MINNEAPOLIS—*The Toro Company* has expanded the operations of its Environmental Erosion Control (EEC) division, Puyalup, Wash., into Hayward, Calif.

David McLaughlin, president of Toro, announced that the company is withdrawing from the landscape contracting business at Landscaping, Inc., Mountlake Terrace, Wash. Landscaping, Inc., was acquired by Toro in May 1971. "Landscape contracting," McLaughlin says, "has proven to be a localized labor-intensive business that does not appear to lend itself to efficient systemization on the national scale."

EEC establishes grasses, legumes and similar cover through hydro-mulching and aero-seeding, especially in areas where high wind or water erosion work to strip away topsoil as a result of construction or strip-mining. Unlike the landscape contracting business, the operations of EEC are dependent on advanced technology and adaptable to labor-saving equipment McLaughlin indicated.

FTC REQUIRES CARE LABELING ON APPAREL

WASHINGTON, D.C.—A new regulation issued by the *Federal Trade Commission* requires that all wearing apparel bear permanent labels that contain instructions for their care and maintenance.

The rule, effective July 3, 1972, applies to all garments and hosiery, domestic and imported, leaving a manufacturer's plant after this date. The FTC ruling does not extend to other footwear and articles used exclusively as hand or headwear.

Instructions on care and maintenance of each article must include regular care and maintenance necessary during the ordinary use of the article (washing, drying, ironing and dry cleaning) and any special maintenance procedures which should be followed. The labels must remain legible and affixed to the garment for the useful life of the article. The FTC will also consider individually any petitions by manufacturers for exemptions under the rule. Examples of exemption might be specific articles which retail for under \$3 and are completely washable under normal circumstances, or if affixing a label would be impractical because of the physical characteristics of the article.

NGF ELECTS OFFICERS

PALM BEACH, FLA.—Robert D. Rickey, vice president of MacGregor/Brunswick, was named president of the *National Golf Foundation* at the annual spring meeting held April 24 at La Coquille Club, Palm Beach, Fla. Other officers for NGF are E.R. Woolley, Acushnet, vice president, and Arthur Goettler, Sporting Goods Manufacturers Assn., secretary-treasurer.

Named to the Executive Finance Committee of NGF were: Vaughn Clay, Dunlop Tire & Rubber Corp, Chairman; Mark Cox, Victor Golf Company, PGA Div.; Fred Kahn, Wilson Sporting

Goods Company; William Kaiser, Hillerich & Bradsby Company; Rickey, and Woolley.

Members of the board of directors of NGF are: Clay, Cox, Goettler, Kaiser, Rickey, Woolley, Joseph Graffis, GOLF MAGAZINE and GOLFDOM; Richard Kurrasch, Uniroyal; Howard Nannen, Spalding and William Sovey, Ben Hogan Company. William Kaiser was also named chairman of the membership committee.

At the Sporting Goods Industry's annual spring meeting, also held at La Coquille, Paul MacDonald, Dunlop Tire and Rubber Corp., was elected president. James Hansberger, Ram Golf Corp., was elected vice president and Earl Collings, Faultless Golf Products, secretary-treasurer. Officers of the National Assn. of Golf Club Manufacturers are: James Butz, Victor Golf Company, PGA Div., president; James Shea, Spalding, vice president, and Karsten Solheim, Karsten Mfg. Company, secretary-treasurer.

CLUB CAR EXECUTIVE AUTHORS BOOK

AUGUSTA, GA.—Robert L. Balfour, vice president, marketing and sales of Club Car, Inc., is the author of a book titled *A Nobody Gives Hell to Everybody*. The 235-page book was conceived and written in motel rooms during the many sales trips and meetings he has attended in conjunction with his duties with Club Car.

Balfour, who traveled extensively with the late President Dwight D. Eisenhower, speaks freely on a myriad of public issues, from women's liberation to liberalization, with heavy taxation on gambling and prostitution.

"A Nobody Gives Hell to Everybody" is published by Vantage Press, Inc., 516 West 34th Street, New York, N.Y. 10001.

NATIONAL GOLF DAY DISBURSES \$145,000

PALM BEACH GARDENS, FLA.—Eight educational and charitable organizations have received shares totaling \$145,000 from proceeds of *National Golf Day*, 1971.

That is the amount amateurs
