

PORTA-SPAN® BRIDGES

span the gulleys and the creeks!

Coming or going, an attractive bridge over a creek or gully will accomplish two important points for you. It will speed up play on your golf course . . . more rounds per day, per week, per month. Secondly, it will allow you to utilize some of the natural hazards on your course without adjusting the holes.

The Porta-Span® bridge is dipped . . . not just painted . . . with a wood preservative so it's weatherproof. The arched beams are laminated. A 10-gauge galvanized steel plate is bolted to the under side of each beam. These rugged bridges have a maximum vehicle load limit of 2500 pounds or 15 persons.

For extra safety and even better looks, there are optional wood (as shown) or chain and steel post railings available. And they come in 3 and 5-foot widths with lengths of 8, 12, 16 or 20 feet.

moveable - - erect in 2 hours

These sturdy bridges can be assembled easily and quickly. There are no footings needed so they can be moved easily from place to place. Or they can be moved indoors during the winter months. One man can assemble the bridge in about 2 hours. Write today for FREE, descriptive literature and prices on the Porta-Span® bridge.
