

The best-looking golf car also has the best warranty.

At Cushman, we build golf cars to be beautiful **and** dependable. And we back up what we say by paying for all parts **and labor** for a full year should a new Cushman golf car be defective in any way. We know of no other manufacturer who offers the same warranty. Maybe that's because no other manufacturer builds golf cars the way we do.

We also offer more extra features, at no extra cost to

you: Automatic seat brake, premium suspension, lead-coated steel body panels where they're needed for maximum corrosion protection, automotive-type steering, a time-proven electrical system or a greatly improved gas model and

Cushman. Proven performance.

lots more, in addition to our award-winning styling.

We've been building top performance into Cushman small vehicles for a quarter of a century. Today we're one of the world's largest manufacturers of small vehicles of all kinds. It's a record we're proud of, and one you can depend on.

So if you're about to make a major investment in a golf car fleet, look at the warranty and the record... and let the promises go.

Less of
everything
you don't
want in
your grass.

Emerald is the posh, new creeping bentgrass so satisfying to both golfers and superintendents. Instead of demanding attention, it attracts it—with turf uniformity, texture and color unique in a seeded bent.

Its vigor self-heals wounds, including divots and cart tracks. And it has successfully held down *Poa* where other bents have failed. Tested 5 years in North America, its health, appearance and performance to date have been a well-told tale of praise.

Emerald variety creeping bentgrass. Get some, if you can. Sold by leading turfseed wholesalers and their jobbers serving your area.

Who cares what "The

You do!

And with good reason! A disgruntled greens committee can make a superintendent's life miserable. But a happy committee is your greatest asset.

Balan[®] can be a big help in that direction, as well as making members in general proud of their course. How? By eliminating most bothersome weed grasses that make the difference between a good course and a great one.

You name it . . . crabgrass, *Poa annua*, goosegrass, foxtail . . . Balan gets rid of

Committee" thinks anyway?

all these, without harm to established turf.

This year, Balan will prove its effectiveness on more courses than ever . . . with good reason. It works!

Isn't the prospect of a happy committee reason enough to ask your Elanco distributor salesman to help work out a full-course Balan program for you?

Elanco Products Company, a division of Eli Lilly and Company, Dept. E-455, Indianapolis, Indiana 46206, U.S.A.

(Balan®—benefin, Elanco)

Now here's a mower.

This 9-gang giant will take on the biggest mowing job you have and breeze right through it.

Grady Hassell can tell you about it. He's with Lawn & Turf, Inc. in Conyers, Georgia.

As a Jacobsen Distributor he has all the answers about Jacobsen equipment. Like the huge F20 9-gang mower.

He'll tell you that it cuts a wide 19-foot swath. It has a gargantuan appetite that can cut through 76 acres in one work day. And that's mowing at a realistic pace.

But it's easily tamed for more delicate chores because the operator can raise and lower any of the reels with a fingertip control. Things like median strips can be mowed from the road shoulder with the outboard reels, for example.

Just because it's big doesn't mean it's clumsy. Far from it.

There's a ground-gripping front drive that gives sure traction on grades and sidehills.

And the rear wheel steering means that the reels turn in the same arc as the steering wheels. No skidding, no skipping, no uneven cutting in the turns. And no wheel streaks in the straightaways, either.

If you have big mowing chores ahead of you, ask your Jacobsen Distributor about how the mighty F20 can help you. An actual demonstration ought to raise your eyebrows a couple of notches.

And you might even find yourself saying, "Now here's a mower."

Your Jacobsen Distributors.

Before we sell it, we buy it.

DR. FRED V. GRAU

ANSWERS TO TURF QUESTIONS

SHORTAGES IN PEACE TIME

The last declared war ended about 30 years ago. The people of the United States suffered through shortages and rationing then, and, when this article is published, we may be going through similar antics—but in peace time. Our peace-keeping efforts around the world seem to have ended with severe shortages of energy, materials, fertilizers, plastics and who knows what else!

Each golf course must assess its own position in this topsy-turvy world in which we find ourselves. It wasn't so very long ago that fairways were mowed with horse-drawn equipment. Many of us can still remember this era. Could it return? Before I try to answer, let me remind everyone that, when tractor fuel is scarce, gas and oil will be allocated first to food producers (farmers).

Fairways have been kept playable with horse-drawn mowers and with grazing sheep. I've played on woolly-cropped turf; it isn't so bad. Putting greens and tees have been magnificent when mowed with hand-pushed mowers. Most every superintendent, I hope, has kept his hand mower. With our expanding population and a high rate of unemployment, we should be able to find plenty of strong willing backs to push these mowers.

Automatic irrigation systems consume energy. When energy is in short supply, we may be irrigating less. With less water, we can expect fewer weeds. There will be less mowing during short rainfall periods. Turf-grass quality generally should not suffer.

Fertilizer is essential to the production of food. This is the first order of priority. Recreational turf will be far down the line when fertilizer

needs are subjected to allocation. Each golf course will be obliged to consider very carefully its fertilizer needs in its own order of priorities. The old concept of compost may be high on the list to keep putting greens puttable. (I've had a compost pile going since 1946.)

Chances are good that the total energy situation will get worse before it gets better. We can indulge in wishful thinking and hope and pray that alternative forms of energy will become available. Some people run their cars on gas produced from garbage and manures. In the Southwest there is solar energy going to waste. Why haven't we tapped that source before now? Hydrogen is the least polluting of all fuels. Why aren't we geared to using it?

I have to wonder how much energy is required to make artificial turf to cover a football field. Natural grass uses the sun's energy to produce playing turf. I think that football players will be glad when the playing turf gets back to nature.

I have a good hand mower. All I have to do is find a willing boy or man to push it (wish I could). I'll set it high, use very little fertilizer and not irrigate at all. Each of us will find a way to reduce our dependence on petroleum-based energy, I'm sure.

Q—*We have several spring and stream fed lakes on our golf course. Could you suggest a way that we could use these bodies of water more fully during this period of shortages?*

(Indiana)

A—A letter just received from Bill Lyons of Canal Fulton in Ohio gives us a clue. Consult your state fish and game commission, stock the lakes with fish and grow food for the members and for sale. We must

HIGHLAND COLONIAL BENTGRASS

- One of the most economical of the fine-bladed grasses.
- Thrives on close-cutting to 1/4 inch.
- A winter-hardy grass for overseeding in Southern climates.
- Slow growth rate helps cut maintenance.
- Thickens and heals scars on playing surfaces.
- Durable under heavy foot and vehicle traffic.
- Adaptable to varying soils and climates.
- With 8 million seeds per pound, plant potential is great.
- Offers spring strength when used for overseeding.
