

Our driver tested the Otis Golf Car on five of the most demanding courses in America.

He hasn't been any easier on our golf car than he's been on the competition. Nevertheless, the Otis® Golf Car came through in flying colors. Because we build the Otis to stand up to everything any driver can give it. Even Lee Trevino. We start with a welded, tubular steel frame, then we add all the features that make the Otis Golf Car the most sophisticated car in the sport. Things like a Cyclolac® body that remembers its shape when somebody gives you an accidental nudge. Four wheel stability and automotive steering that, coupled with a low center of gravity, make your Otis Golf Car the easiest handling, surest footed car on any course.

For reliability, the Otis Golf Car is equipped with six heavy duty 220 amp hour batteries that will run your car all day long at speeds up to 11.6 m.p.h. Then we couple the motor to a quiet hypoid drive and add a really reliable braking system.

What you get is a golf car that will stand up to everything a driver like Lee can give it. And that's a lot.

Otis Elevator Company

Special Vehicle Division,
Stockton, California 95024

A limited number of dealerships available.
