

The Jacobsen 70" Triplex trims close like a hand mower, mows fast like a riding mower.

Here's the most maneuverable and versatile little riding mower you've ever laid eyes on. Small but powerful. It's driven by a full 8 HP engine.

Without leaving the seat you can trim close around trees and under low-hanging shrubs and tree branches. And cut a hefty 70" swath at the same time.

Reels come equipped with either skids or rollers. Large capacity catchers are optional.

In fact, you can reach all the controls from the driver's seat, including the key switch, starter, choke, throttle and reel drive clutch.

Without taking your hands off the steering wheel, you can speed up or slow down, and go forward or in reverse. It's all done with only one foot pedal, and our advanced hydrostatic transmission.

A feature you'll only find with Jacobsen for this type of unit.

Here's another Jacobsen exclusive. The reel speed is independent of the mowing speed. Which lets you put a beautiful crew cut finish on any turf.

Want to change cutting height? Easy. All you need is a wrench.

And, the 70" Triplex Trimmer is the only mower of its type to

meet the American National Standards Institute, Inc. (ANSI) safety standards.

The mowers are fully articulated so they hug the contours of uneven ground.

Ask your Jacobsen Distributor for a demonstration of the biggest little riding mower on wheels.

Take a look at leadership.
