

# E-Z-GO. The best gets better!

## A new combination of comfort and efficiency.

For a quarter of a century, E-Z-GO has engineered and manufactured the world's finest golf car. And with age, we continue to improve.

This year we're offering a new level of comfort and efficiency. Here's what we mean.

### A new kind of comfort.

We've redesigned the front suspension system for reduced maintenance, greater efficiency, and an even softer ride.

A newly engineered, rugged front fork and heavy duty coil springs have been added to the three wheel vehicle. And on the four wheel car, a thoroughly new front end with springs and shock absorbers means less maintenance, better alignment, and heightened performance.

These advanced innova-

tions, coupled with welded uni-frame construction and the wide solid foam bench seats, result in the most luxurious riding golf car ever.

### From dawn to dusk.

On our electric models, as a case in point, we've reduced the weight an average ten percent. This reengineering increases your overall efficiency. You now get more holes from a charge, more pep on the hills. Yet none of the inherent strength has been sacrificed. E-Z-GOs are still built to survive the conditions that drive most golf cars in the ground.

### The point of all this.

If you consider product reliability, manufacturing superiority, low maintenance, durability, increased comfort and efficiency, E-Z-GO is the exceptional value for your money. Which means the golf car that's far ahead of the rest will

obviously retain its worth while the others are trying to catch up.

So no matter what your requirements are, three wheel or four, electric or gas powered, you're assured the highest return on your investment with E-Z-GO.

### If you'd like to know more.

Your local E-Z-GO distributor will gladly arrange a product demonstration and test on your course. For his address, check your Yellow Pages, or call E-Z-GO, Augusta, Georgia at (404) 798-4311. See why E-Z-GO is the golf car industry's standard of excellence.
