

THE LEADER IN GAS GOLF CARS SPEAKS OUT ON ELECTRIC GOLF CARS.

All electric golf cars are not created equal. Harley-Davidson's Master Drive™ is the unique two-circuit system designed to be economically superior. That's why our electric golf cars are the most efficient on the market today. Unlike other electric golf cars, the Master Drive System draws only half power at low speeds, and that means lower electrical costs. From our energy-saving starter to the special mold of our comfortable bucket seats, there is no finer electric golf car than a Harley-Davidson.

It's that same innovation and excellence that made Harley-Davidson #1 in gas cars. Take our 3-wheel gas car for example. A lightweight fiberglass body that's rust-proof and more impact resistant than any other construction on the market. Money-saving

features like a maintenance-free battery and practical features like a rubber-mounted engine to cut down on noise and vibration: these are the kind of features that keep our gas cars on top.

Along with our golf cars comes the most extensive service you can find, from the Harley-Davidson Dealer Network, the largest in the industry. Always available for smart fleet planning, maintenance, advice and the kinds of things that help you generate the most income from your Harley-Davidson Golf Car Fleet.

Call your Harley-Davidson dealer today. When it all comes down to the bottom line, you'll be glad you did.
