### Modified ureas meet turf managers' changing needs

By George R. McVey, Senior Research Associate, O. M. Scott & Sons

For some time, urea has been a popular choice as a nitrogen source for turf grass and ornamentals. Years ago, the chemical industry made use of the fact that urea can be chemically combined with formaldehyde, in what is known as a condensation reaction, to produce commercially important plastics—and also (by altering conditions) to produce valuable fertilizer compounds that release nitrogen slowly from their chemically bound molecules.

The extent to which the condensation reaction occurs can be altered by varying such factors as temperature, acidity and time. This means that the rate at which the final product is released under varying weather conditions can be controlled quite effectively at the time the product is manufactured.

It has taken years of field trials, of course, to determine just which of the options made available by varying the urea-formaldehyde combination are best exploited by professional turf managers. Lately, the high cost of manpower- to apply fertilizer, and to mow grass-has become one of the more important considerations. In addition, the last few years have seen much concern about water pollution caused by fertilizer run-off. Some of the modified ureas now commercially available appear to offer strong advantages in cases where labor costs and pollution are prime worries.

The plant nutrient forms of ureaformaldehyde provide a high nitrogen content, consistency of performance, are safe for all types of grasses, odorless and economical, and have earned a popular place among private and commercial growers for turf and ornamentals use. At present, ureaformaldehyde condensation fertilizers make up an estimated 90% of all the "controlled release" nitrogen products sold in the U.S.

There are essentially two categories of commercial urea-formaldehyde fertilizer materials now marketed. The more completely linked ureaformaldehydes are relatively less soluble in cold water than the di- and tri-ureas, and they make up about 75% of the products called ureaforms.

O.M. Scott has two main formulations with some carefully selected differences in properties, attributable to their higher percentages of the di-, triand tetra-ureas. These are called methylene ureas or MUs. Note that the total nitrogen stays the same (38%) in all types, and that the bigger the molecules—the more ureas linked together—the less soluble the product is in cold water. Solubility can almost be tailored to meet specific needs. **Keeping growth under control** 

Data from some of our recent research, as demonstrated in the accompanying tables and graphs, show quite clearly how the methylene ureas are useful to the turf care professional. Among the performance gains:

\* Chance of burning the grass can be minimized.

\* Fast greening can be achieved, and good color maintained.

\* Pollution by run-off nitrogen materials is reduced.

\* Application frequency can be minimized to cut labor costs.

\* Cutting frequency can be reduced — also to save on manpower costs.

Many of the advantages seen in turf growing can also be obtained by those working with small ornamentals, such as *Catalpa speciosa*, juniper and Cotoneaster. Growers of these will likely choose a different mix of methylene urea (a formulation tailored to give a higher percentage of cold water insoluble nitrogen) than the MUs used with turf. The different form, however, is available over a long period of time.

Recent investigation at Scotts pinpoints quite specifically how the advantages of methylene ureas reflect the chemical composition and physical properties of selected urea formaldehyde condensation products. **Burning** 

Nitrogen salts—such as sodium nitrate and ammonium nitrate—are familiar fertilizer materials. They are readily soluble, give nitrogen in a molecule readily utilized by the plant, and are thus quick-greening. They can, however, burn both turf and ornamentals, so they are usually applied in very dilute form.

Methylene ureas, on the other hand, as illustration A shows, are able to supply useful nitrogen, but without the burning potential. Typically, a 20pound sample of nitrogen as methylene urea/urea has a salt index of 0.61. A widely used formulation of ammonium nitrate has a salt index of 2.99 or 4.9 times the burn potential as methylene urea/urea.

Illustration Salt index of		rogen sources.	
		Salt inde:	1/ 2/
Nitrogen Source	%N		Equal N levels
Sodium nitrate	16	100	6.25
Ammonium nitrate	33	105	3.18
Urea	46	75	1.63
Ammonium sulfate	21	69	3.29
Methylene urea	38	4	0.11

1/ Concentration of ions in the soil solution based on sodium nitrate at 100.

2/ - Nitrogen is mixed with air dried soil which is brought to 75% of field capacity and stored for 5 days at 5 degrees C.

# Cushman mobilizes for the fight against

In the fight against inflation and rising labor costs, you can't win with foot soldiers. You need to get your crew rolling with the Cushman

Turf-Care System. At the heart of our labor-saving system is the Cushman 3- or 4-wheel Turf-Truckster® vehicle. Powered by a rugged, air-cooled 18-hp OMC engine, the Turf-Truckster moves people, tools and equipment quickly and economically. And recent im-provements help this year's Turf-Truckster deliver <u>50%</u> greater

payload capacity. But what has made Cushman a world leader in turf maintenance vehicles is our full line of optional attachments, designed to handle many of your most important turf jobs. All are designed expressly for the Cushman Turf-Care System. And all are interchangeable—in minutes—thanks to Cushman's pin-disconnect system.

Cushman's pin-disconnect system

makes equipment attachment a snap

No bolts. No hitching. No more jerryrigged trial-and-error attachments. And that saves time... in the shop and in the field.

The Greensaver teams up with either the 3- or 4-wheel Turf-Truckster to aerate greens, tees or other turf areas up to 10 times

faster than walk-type units. Choose the drum best-suited to your turf: 1/2" coring tines, 3/8" coring tines or slicing tines—all interchangeable within the system. What's more, both coring drums collect cores as you aerate, or remove the side plates and return the cores to the turf to be broken up as top dressing.

#### SHORT BOX & FLATBED/BOX

Your Turf-Truckster becomes a flatbed hauler with just two pull pins in place. Bolt on the optional side panels and tailgate to the flatbed, and you have a 1,500 pound capacity\* box that can be dumped manually or hydraulically.

#### SPRAYER

Outfitted with optional 15' boom and handgun, this attachment is ideal for spraying greens, trees, bushes or roughs quickly and accurately. Powered by the Turf-Truckster vehicle's optional PTO, and equipped with ground speed governor, calibration is easy and thorough. And a big-capacity 100-

gallon polyethylene tank means fewer stops for refilling.

TOP

## DRESSER

Compared to self-powered or walk-type top dressers, this unit quickly pays for itself in saved manhours. A rubber fabric moving bed and rotating brush are matched to the vehicle's ground speed governor for an evenly spread 311/2" swath. The clutch control, to engage spreader, is conveniently located to be operated from the driver's seat. And the hopper holds up to 1,000 pounds of material from rock salt to powdered fertilizer.

## your work force rising costs.

#### **QUICK AERATOR**

With its 46" swath, this attachment earns its name by finishing big aerating jobs fast. By hydraulically lifting it into transport position from the driver's seat (optional hydraulic system and dump set required), you can move quickly

CUSHMAN

from job to job, too. Choose from three tine styles: slicing, coring (2 sizes) and open spoon.

> The Cushman Power Converter is an inexpensive way to turn your Turf-Truckster into a mobile power plant for electric tools,

floodlights ... anything with a universal motor that draws up to 12 amperes at 120 volts DC. So instead of bringing small repair jobs back to the shop, your crew can handle them in the field. That can be a powerful advantage over the course of a season.

\*Rating for vehicle equipped with 9.50-8 rear tires. © Outboard Marine Corporation 1980. All rights reserved.

Moving people and equipment efficiently is what the Runabout is all about. The two-man 18-hp model has a 1,500 pound payload capacity and, like the one-man 12-hp Runabout, features a  $4^{1/2}$ ' pickup box and 3-speed synchromesh (2nd & high) transmission. And both deliver plenty of maneuverability, without tying up a golf cart that could be turning a profit on the course.

If you're looking for a way to turn back inflation and rising labor costs, let us show you the Cushman® Turf-Care System. Each vehicle and attachment is designed with the kind of quality you've come to expect from Cushman... and the common sense engineering that helps you cut downtime and operating costs. And all are backed by our worldwide dealer network.

To find out how the Cushman Turf-Care System can mobilize your work force, and hold down rising costs, ask your Cushman Turf Dealer for an on-turf demonstration soon. Or complete and return this coupon today. 81-CUT-1 E431010

#### SPREADER/SEEDER

Mounted on the optional Short Box or Flatbed/Box, its cyclone action broadcasts as much as 300 pounds of seed, fertilizer or other material over a 40' wide area. The Spreader/ Seeder is powered by the Turf-Truckster vehicle's optional PTO with extension shaft. And the controls are operated from the driver's seat.

CUSHNAN The Labor-Saving Turf System 1001 Cushman, P.O. Box 82409, Lincoln, NE 68501

Let's see your System at work, Cushman.

#### 14 NOVEMBER / GOLF BUSINESS

Instead of being in a salt form, the nitrogen in MUs is largely bound in the methylene urea molecules. This keeps the burn potential low, and also determines the fertilizer's ability to "meter" its nitrogen release. This rate of release can also be gauged by a physical characteristic termed "cold water insoluble nitrogen" or CWIN. The nitrogen in ureaformaldehyde condensation fertilizers is bound into compounds that are relatively insoluble in cold water.

In the practical sense, this means that methylene ureas, with 38% or 42% CWIN, have a low burn potential to foliage, whether the fertilizer is applied to wet or dry foliage. By contrast, a conventional complete fertilizer. with its 2% CWIN index, definitely presents a burn hazzard.

Cold water insolubility also tends to reduce the loss by leaching-a particularly desirable characteristic in the case of nitrogen.

In addition, the methylene urea forms of nitrogen are not particularly volatile-certainly not so compared to ammonia compounds. Thus MUs lose little of their nitrogen values due to volatilization.

Urea in its natural form is a fine, fast-greening fertilizer. In the MUs, as marketed for turf application, up to

28% of the urea is fast improvement in turf color. (In the ornamental formulations, of MUs, only 15% of the urea is unbound.) The result is a steady availability of nitrogen that keeps color at the preferred range.

Another factor in the economics of turf maintenance is the frequency of mowing, and the bulk and poundage of cuttings that must be disposed of. Our studies indicate it is the cold water solubility that is the determining factor here-with a metered percent of the nitrogen going into solution, the growth of turf is more uniforms and less than with all soluble nitrogen sources. (illustration B)

In our own formulations, and in the other commercial urea-formaldehyde condensation product formulations, there are some distinct differences and advantages. We have obtained some good information concerning the guidelines for fertilizer choice-and they are particularly worth following in these times of mounting pressure on the team charged with turf and ornamentals maintenance.

#### When Dave Portz renovated 14 fairways with Roundup, the members played the same day he sprayed.

Dave Portz Grounds Superintendent Brookside Country Club Mecungie, Pa.

Cleaning up a weedy fairway doesn't have to be a slow, messy job for you—or a hardship for your golfers.

Roundup<sup>®</sup> herbicide helps make renovation fast and efficient —as Grounds Superintendent Dave Portz discovered last year.

"If we had chosen to plow the course under, we would've had to close it," Dave says. Instead, he applied Roundup on 14 weedy fairways, and reopened

the course the same day. While Roundup worked, the members played over the dying turf, with no problems. The members—and Dave—liked that. They were

glad, too, that Roundup won't wash, leach or volatilize to injure desirable plants along the fairway. Dave simply took precautions against spray drift.

This year, reach for Roundup to control many tough weeds. It can make turf renovation fast and efficient for you—and leave a lot more playing time for your golfers.

## The TM Proved tough enough to be a Cus

People in your profession naturally expect a mower from Cushman to be something special. In its first year, the Front Line proved it is just that

The common-sense engineering and durability of the Front Line are just what you'd expect from a

> Suspended bucket seat for comfort

Large-capacity fuel tank— up to 6 hours between refills Cushman<sup>®</sup> product. But its cut is cleaner and more even than most people expect from a riding rotary mower.

Now, in addition to the 72" deck, we are offering a 60" mower deck for smaller jobs. In fact, with just one tractor you can now handle a variety of jobs with the accessories

shown below. And this year the Front Line is also available with a diesel power engine.

Yes, Cushman has put even more into the Front Line mower this year. so you'll get more out of it in the years ahead. To find out more about what Cushman value could add to your mower operation, contact your Cushman dealer today.

Wheel-type steering and clustered gauges for convenience

Parking brake and foot brake

Split front traction assist pedals for sharp turns and maneuverability

Mower deck is 12-gauge carbon steel with welded reinforcements

Offset deck for close trimming

Single rear-wheel steering with traction assist provides a zero turning radius

The famous 18-hp air-cooled OMC engine powers its way through the toughest cuts

Differential is 100% Cushman

Deck lifts hydraulically for curbs

Hydrostatic drive

PTO drive is Cushman quality

8 cutting height settings from 1" to 41/2"

#### le enough to pay off all year. Now versatil

These specialized accessories make the Front Line even more productive for you.
