# A Real Success Story

## Crabgrass control and proper feeding in one application.

Tee Time 20-4-10 fertilizer gives you an unbeatable combination of nutrients and pre-emergence herbicides for healthy growth and control of crabgrass and other grassy weeds.

20-4-10 gets your grass off to a healthy start in the early Spring. The combination of available nitrogen, controlled release nitrogen, and sulfur in 20-4-10 *stimulates initial color response without excessive growth*. The controlled release nitrogen, derived from sulfur-coated urea, doesn't require high soil temperatures or bacterial action to start working. Sulfur-coated urea is unique in that it releases its entire nitrogen content during

the same growing season to allow the grass full utilization of this major nutrient.

The 2:1 ratio of nitrogen to potash also contributes to the proven performance of Tee Time 20-4-10. The proper balance of potash aids the overall health of the grass, increasing resistance to drought, disease, and traffic.

To this carefully formulated product, we add Balan<sup>®</sup>, Betasan<sup>®</sup>, or Dacthal<sup>®</sup> to provide a winning combination for proper feeding and pre-emergence control of crabgrass and other grassy weeds. Pre-emergence products perform as well when combined with fertilizer as when applied sepa-

rately, and sometimes even better. A one-step application can save you both time and labor.

Our 20-4-10 with Balan<sup>®</sup> and Dursban<sup>®</sup> goes even a step further by allowing you to add insect control to your feeding and weed-control program in a single application. That can mean even greater savings in time and labor.

You can switch to The Andersons' Tee Time products with confidence, knowing we spent 10 years developing and refining them. Try using one of our 20-4-10 crabgrass-control products as part of your overall program. One of them is just right for you.

Our distributors are

qualified to assist you in determining which of these fine products best suits your needs. If your present supplier does not carry The Andersons' Tee Time products, call us toll-free or write and we'll give you the name of your nearest distributor. You'll be glad you did.

# There's No Mistaking Smithco Quality

## There's no mistaking a Red Rider!

SMITHCO'S work cart is the work horse on any golf course. It's tough Big Red power head gives it performance to spare. The **RED RIDER** is the easiest loading, easiest operating, most durable work cart in America. And, the easiest to maintain. No transmission, no differential, easily serviced with standard tools. It runs long. It runs hard. And it doesn't cost a bundle to operate. That's a **SMITHCO RED RIDER!**

## There's no mistaking the Easy Rider Trap Maintenance System

Nothing rakes traps quite like it! Now, with two independently operated attachments — a weed cultivator and a sand **SUPER SCOOPER**. Lets you cultivate OR scoop, and rake at the same time. All this, plus a lightweight, maintenance-free molded fiberglass body. Engine access couldn't be simpler, with hinged seat and rear deck section. Easy on the budget.

# EMERALD OR PENNCROSS ?

**ONLY THE SUPERINTENDENT  
KNOWS FOR SURE.**

Turf experts usually agree: Pennncross and Emerald are the two great creeping bentgrasses. There's a reason.

Pennncross and Emerald perform and look very much alike. More often than you know, Emerald has been used to repair damaged Pennncross greens without changing putting surface *quality, texture or color.*

That's why some very shrewd Superintendents now blend Emerald and Pennncross to overseed greens that were originally planted in a pure Pennncross stand.

Do so and you too will retain quality and have a green of championship caliber that will recover rapidly from injury and be disease-resistant.

There's yet another bonus. You'll discover that Emerald creeping bentgrass is just possibly the greatest value in the grass seed business today.

In fact, Emerald is such a great buy it is now widely used not only on tees and greens, but *on fairways as well.*

Emerald. It's a very good grass. Use it. You may be the only one that knows for certain it's not Pennncross.

# Renovation in progress.

Now you can renovate your fairways in days—while your golfers keep playing.

Just apply Roundup® herbicide to your weed infested fairways. While Roundup goes to work, golfers can keep playing right over the treated turf. And you can reseed right through the dying grass just 7 days after applying Roundup. Re-infestation from weed roots won't be a problem either, since Roundup effectively controls the root systems of treated weeds and grasses. Yet Roundup is inactive in the soil, and won't move out of the treated area to injure desirable vegetation. You can even use Roundup to control weeds around greens, for general cleanup, in and around sandtraps, along fence lines, even around the clubhouse and tennis courts.

See your chemical dealer soon for your supply of Roundup. It can make fairway renovation and golf course weed control fast and efficient for you, and leave a lot more playing time for your golfers.

## Nothing works like Roundup.

# DON'T FOOL WITH MOTHER NATURE

## It's Not Nice . . . and It's Not Smart.

The synthetically produced fertilizers are OK for awhile . . . for a quick spurt, but turfgrass professionals are learning from Mother Nature that the synthetics are not as effective over the long run as naturally organic Milorganite. Turf tires and develops a worn out look.

Naturally organic Milorganite provides the nutrients needed for healthy strong turf . . . And that's the way Mother Nature wants it ALWAYS.

**Start your turf today on its way to a longer prime of life with Milorganite.**

## MILORGANITE . . . THE GOLF COURSE CHOICE

*Milorganite does not burn and is almost impossible to over-apply.*

DO NOT USE ON EDIBLE CROPS

**MILWAUKEE METROPOLITAN SEWERAGE DISTRICT**
