The Experience At FarmLinks, turn the page

## FarmLinks Makes Golf Educational

The Experience at FarmLinks is a unique educational opportunity created to help golf course superintendents enhance their management skills. Better yet, the trip treats you to a relaxing and enjoyable getaway, rich with Southern hospitality.

Hosted by Pursell Technologies Inc., each three-day Experience takes place at the spectacular FarmLinks facility in Alabama — a championship 18-hole golf course that also serves as a living laboratory and product testing site. While visiting and playing the FarmLinks golf course, superintendents are able to view some of the latest industry research and learn about golf-related products, including POLYON® controlled-release fertilizer, as well as Toro turf equipment and irrigation systems, Syngenta chemistry, Ingersoll-Rand's Club Car golf cars, and more.

To request a free invitation to the Experience at FarmLinks, simply contact your Harrell's or Simplot distributor or call 866.784.8687. We'll save a place for you.

## There's no such thing.

You can't control nature or the weather. Some years will be kind to you. Other years will hit you with problems you never dreamed of. And they'll hit hard. There is no "easy fix." We don't claim to be one.

Revolution won't make three inches of standing water on the 9th green disappear overnight, but it can keep excess water from hanging up in the thatch/mat layer. Revolution's molecular structure pulls moisture off the surface, balancing air to water ratios throughout the profile and allowing excess moisture to drain away.

Revolution lets you give the turf the water it needs without sacrificing the firm surface you want for quality play.

Revolution can't replace the need to water, but when supplies are short it keeps whatever moisture *is* in the rootzone more accessible to your turf. By maintaining water availability Revolution increases your turf's ability to maintain antioxidant and chlorophyll levels under stress. Allowing these basic plant functions to continue makes your turf more resilient to stress and increases the chances of turf survival when you're hit with nature's extremes.

Just 6 ounces of Revolution once a month can keep your soils, and consequently your turf, performing at the best levels possible. Revolution can pull your turf through the rough spots and help you maintain great playability, even when the weather is less than cooperative.

  
**Revolution<sup>®</sup>**  
An essential tool for  
protecting your turf against stress.

**RAIN  BIRD®**

**T**he girls just wanted to have fun. But they couldn't — not with the Riverview Country Club's golf course maintenance staff in the way of their play.

At least, that's what some of the women golfers believed back in the summer of 2002. The women, who were participating in a Tuesday night league at the Appleton, Wis.-based nine-hole private club, were convinced the golf course maintenance staff conspired to fire up its equipment to groom the course every time the women took to the course to play. Come Tuesday night the women claimed they could count on hearing the drone of mowers and the whirring of string trimmers in full force.

"They thought we made that a high maintenance time and that it interfered with their golf," Riverview superintendent Dan Williams said.

The women also thought they were playing second fiddle to the male golfers. They charged that Williams and his crew would never perform such maintenance during men's play.

Williams pleaded no contest. While he understood their complaints, he assured the women there was no bias against them.

The seasoned superintendent, who just finished his 26th season at Riverview, was smart enough not to debate the issue. The women were right, Williams reasoned, because the customer, as the saying goes, is always right.

So Williams opted to do something to close the can of worms that had been opened. He invited members of the women's league on a tour of the maintenance facility and to a seminar dealing with the ins and outs of the crew's operation. The two-hour workshop, which also included hands-on equipment demonstrations, concluded with a reception featuring free beer, wine and hors d'oeuvres.

It wasn't Williams' prerogative to show up the women by educating them and, hence, sending them a message that their views were wide of the mark. Rather, Williams wanted to make the point to the women that he and his staff were their allies, not their adversaries.

Williams wanted them to see up close the

CUSTOMER, AS  
THE SAYING GOES,  
IS ALWAYS RIGHT

equipment creating all the noise. He wanted them to hear about his philosophy regarding certain maintenance procedures and why they must be performed.

Williams talked to the women about mowing, drainage and cup cutting, among other topics. He showed them the course's pump house and how the course's irrigation system functioned.

Williams also let the women operate some of the maintenance equipment, including a rough mower, front loader, bunker rake and utility vehicle.

"We wanted to make it a special time for them," Williams says.

It was just that.

"It was very educational and a lot of fun," asserts Anne Wiegman, who has belonged to the club for 17 years and is a member of the course's green committee. "We learned about the maintenance that needs to be done on a daily, weekly and monthly basis. I think the women were satisfied. They saw that a lot had to be done and there are only so many hours to do it."

The tour also allowed the women to meet, greet and get to know Williams' staff members, whom they perceived as sweaty working stiffs who rode mowers and raked bunkers all day.

"They got to see that we're human, too," Williams says.

That was Wiegman's favorite part of the tour. "Most everybody knew Dan, but not many people knew the guys who worked for him," she says.

The course conducted the tour again in 2004. With women members coming and going, Williams figures he'll hold the workshop every two years, including next summer. "It doesn't cost much to do," he notes.

## Pin High

*Continued from page 8*

It's a small price to pay for getting along with a vital segment of your customer base. The golf industry needs more women players, and it's integral the industry reach out to them and welcome them, especially if they're feeling slighted.

Now when the women golfers see Williams and his staff on the golf course, they smile and wave to them rather than frown and complain. Many of the women and maintenance staff members are on a first-name basis. Because the women now understand the golf course's maintenance operation, they've taken more ownership in the course. Last but not least, they've come to appreciate the hard job that is working on a golf course.

These days a superintendent must know much more than agronomics to achieve success. A superintendent's

The women enjoyed themselves during the tour and were even able to operate some equipment.

duties now involve economics, politics, psychology, public relations and of course, customer service.

"We're never going to be best friends," Williams says of golfers in general. "But when the chips are down,

I want those people on my side."

Credit Williams for acting proactively in a situation when others might have acted reactively.

The girls playing golf at Riverview Country Club just want to have fun. And they are — thanks to Riverview's golf course maintenance staff making way for their play.
