"The Only Thing That's  
Worked on My Course  
as Long as I Have."

**Cleary 3336™ —  
30 Years of  
Hard-Working,  
Proven Disease Control.**

"When I started in the business, I put Cleary 3336™ to work right along with me on my tees, greens and fairways. Since then, it's the only thing that's worked on my course as long as I have—and probably just as hard. Year after year, it's delivered reliable, broad spectrum disease control on tough turf diseases like anthracnose, brown patch, dollar spot, summer patch, gray leaf spot and more.

"Not only does it consistently give me proven, economical control, it's the one fungicide I reach for time after time for outstanding results in my resistance management program.

I also have the assurance that 3336 is backed by the support and commitment of Cleary Chemical Corporation, a mainstay in the turf industry for the last 65 years.

"Cleary 3336 really is the only thing that's worked on my course as long as I have. And there's no doubt in my mind I've been in good company all these years."
