

INTRODUCING

CONTEC DG MAGNESIUM

The World's Only Dispersible
High Magnesium Application
For Finely Cut Turf

NEW
FOR
2010

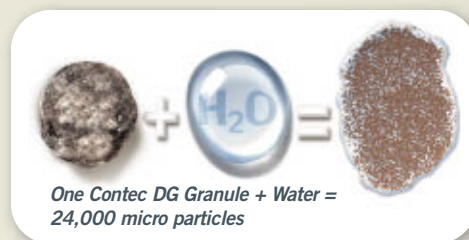

Contec DG 0-0-12 with 24% Magnesium is our new High Visibility greens and tees grade product that assures deep, consistent turf color.

Contec DG 0-0-12 is an essential fertilizer formula containing 24% Magnesium in both soluble and non-soluble forms for fast acting, long lasting results. Because it is a technically advanced, proprietary DG formulation, the product quickly begins dissolving through the turf canopy and into the soil when watered. That means you virtually eliminate any waste of your product investment due to mower pickup or tracking.

6 UNITS WATER
SOLUBLE MG

18 UNITS OXIDE
SLOW RELEASE MG

One Contec DG Granule + Water =
24,000 micro particles

Contec DG Magnesium is the ideal solution when a potassium fertilizer is required or a high level of magnesium is needed to help correct or prevent color-robbing deficiencies during the growing season.

Contec DG Magnesium – The Only Dispersible High Magnesium Application. Find out more. Ask your Andersons Golf Products distributor or visit www.contecdg.com.
