SETH JONES,
EDITOR IN CHIEF

The new Mark Woodward is **thinner, fitter and happier** than the Mark Woodward who was on our January 2010 cover.

Reinvention of Woodwa

Continued from page 20

Golfdom: First off, what can you say about your resignation from GCSAA — was it truly a resignation?

Woodward: It truly was a resignation. It was my decision to resign. The association and I have a long history — I've been a member for 35 years. And I have a lot of good things to say and lot of passion for the association. Being a former committee member, board member, president, CEO... I love the association. I think it's a great organization.

It was tough leaving there, but it was time to move on and do something different. I think I made the right decision to resign and get back to my roots here in Arizona. I've gone full circle with my career. It's all worked out really well for me.

Golfdom: How did it feel, the day after you resigned, when you realized you couldn't go back to work at GCSAA?

Woodward: It was hard because I feel we did a lot of great things while I was there. I think I was instrumental in guiding the GCSAA through one of the nation's most severe economic downturns in years.

Golfdom: So do you have hard feelings toward the association? **Woodward:** I feel great about the association. It's been great

to me. Golf has been in my family since 1938, and my grandfather taught me early to be involved in the association. He is one of the founding members of the Cactus and Pine (GCSA chapter.) I was raised to help the people who are coming up behind you and help the profession, and one way to do that is to volunteer to

be involved and I did that through my whole career.

I have nothing but great things to say about the association. I think it's still a very relevant association for the members to be involved in and to give back to the profession. And they provide some great programs and services. I think GCSAA will continue to do that for long, long time.

Golfdom: So let's talk about your new role as business development director for Landscapes Unlimited. How did you end up there?

Woodward: When I was off work from July (2010) to about November (2010), I did the typical thing most people do, I started networking and using my contacts to reach out to people and let them know that I was looking for a job. One of my calls was to Bill Kubly (CEO and founder of Landscapes Unlimited.) I had known him for a long time. I have always respected and thought very highly of him. He was on the Environmental Institute for Golf advisory committee, very supportive of the environmental things that we are doing with GCSAA and I interacted with him quite a bit.

He asked me to come up to Lincoln (Neb.), at the time living in Kansas that was only about a three-hour drive. So I drove up there and I met with the staff. I was going to have a follow-up interview actually with them in the latter part of October to early November and I got sick and was hospitalized. The day that I was supposed to have two surgeries on my abdomen was also the day that I was supposed to have a follow-up interview with Landscapes Unlimited leadership. So I had to call (Landscapes Unlimited

President) Mike Jenkins on the phone — my wife actually called him on the phone because I was so sick — and said that I couldn't make it because I was in the hospital. So they were gracious enough to obviously reschedule.

Two to three weeks go by after I got out of the hospital, I regained some of my strength and then I went for the follow-up interview. They said they have this opportunity in Scottsdale, and I said well that's perfect because that's where all my family lives. They asked me to work on business development for them, which means I am out there drumming up business, which is great. I feel like I am really back in the golf business again because I am calling on golf courses and talking to a lot of people here in the southwest region and all over the country.

I feel like I am happy everyday when I go to work. There is less stress, less pres-

sure. The biggest thing is I have regained my work/life balance.

Golfdom: I bet Amy (Woodward, Mark's wife) was happy to get back to this area.

Woodward: My wife is very happy and she spends a lot of time with our grandkids. We have 10 grandkids, and 8 of them are right here in the Phoenix area.

Golfdom: After you left GCSAA, you dedicated yourself to physical fitness, and you lost a bunch of weight. But then you mentioned you also became ill and ended up hospitalized for 13 days. What happened, and how serious was it? **Woodward:** I

was in trouble. It was pretty

serious. I was in the most excruciating pain that I have ever been in my entire life. I had a twisted intestine and major abdominal problems. I had a surgery about 7 to 8 days into my hospitalization, they took my appendix out and did a bunch of abdominal surgery on me which was the second time I have had abdominal surgery, the first time in 2004.

I was having X-rays almost everyday for the first 6 or 7 days I was in there. They had to figure out what the blockage was and it's hard to say this, but the doctor thinks it might be true, part of it had to do with this P90X fitness program I went on where I lost 40 pounds in 90 days. Something caused my intestines to twist. And the reason it probably happened is because of my previous surgery that I had in 2004.

Golfdom: What a horrible thing to have to go through. But it's good to see that you're healthy again today . . . Let's talk about the health of GCSAA — how was it when you arrived as CEO? **Woodward:** Steve Mona, (GCSAA's CEO prior to Woodward) no

Jeff Plotts, director of golf course maintenance at TPC Scottsdale, discusses a project he has contracted Landscapes Unlimited to do at the course with Woodward.

Like I've said, the impact of the economy had a huge impact on the association, but I'm very proud of the way I served the association.

Golfdom: Are there any bad feelings between you and the GCSAA Board of Directors? **Woodward:** No.

Golfdom: I know there were some hard days during your time as GCSAA's CEO... do any of them stand out? **Woodward:** There were no doubt some challenging days, but when I put it in perspective and realized the entire nation... and particularly the golf industry, was going through the same things we were... that helped us get through it. It was all due to the economy.

Golfdom: Had you ever experienced that elsewhere in your career? **Woodward:** No, I have been pretty fortunate in my career, and these were unprecedented times.

Golfdom: GCSAA named your former chief operating officer — who you hired — as its new CEO. What are your thoughts on them hiring Rhett Evans to replace you?

Woodward: I think the Board made a good decision, Rhett is a talented person.

Golfdom: Does it seem strange that the person you introduced to the GCSAA now has your old job? **Woodward:** No, not at all, I'm very happy for Rhett.

Golfdom: Have you talked with him lately?

Woodward: Yes, our families are close, so we talk occasionally.

Golfdom: If you could give Rhett any one piece of advice about being GCSAA CEO, what would it be? **Woodward:** That's a pretty easy question; Just to continue to maintain the right balance of what you are doing professionally and personally.

Continued on page 26

doubt was a good leader and left the association in good shape, but almost immediately one of the worst economic downturns in our nation's recent history began.

Golfdom: Do you think back to your time at GCSAA and think that there are things you should have done differently? **Woodward:**

In today's economic environment, every superintendent needs replacement tires that will hold up to the abuse your crew dishes out. Duro has a 50 year heritage of manufacturing tires that will take the punishment while allowing you to stay within your operating budget.

Reinvention of Woodward

“ I have three or four reinventions of myself over the course of my career and all very, very good moves and I am very proud of my accomplishments.”

Continued from page 25

Golfdom: How often do you reflect on your career? You've worn a lot of hats in this business — hosting a U.S. Open, president of GCSAA, CEO of GCSAA, 30 years working in Mesa, now a new career with Landscapes Unlimited... **Woodward:** I reflect on it all the time because the golf industry has been great to me. One thing that I am very proud of, I have been able to reinvent myself at different times of my career and show my versatility as a manager. What I mean by that is, I went from an assistant superintendent to a superintendent to a golf administrator to a parks and recreation administrator with multiple facilities like tennis, baseball and those types of things. And then to be a golf operations manager and then a CEO and now, here I am a business developer. So I have three or four reinventions of myself over the course of my career and all very, very good moves and I am very proud of my accomplishments.

I can't complain about anything. It's been a great ride in every way.

Golfdom: My last question is a two-parter: What do you want your colleagues in the industry to know about your departure

from GCSAA, and what do you want them to know about how you are now where you've landed? **Woodward:** I feel very blessed to have been a part of GCSAA in so many ways. I am happy and things are going well for me right now. I also feel blessed to be working for Landscapes Unlimited. Bill Kubly gave me this opportunity and it happened to be in my hometown, which was perfect. I really want to give my all to this company. I feel like I am back in the golf business, but it's not just a golf business. I'm also working with municipalities on things like sports field development, soccer pitches and baseball fields, football fields. There are a lot of different things going on at Landscapes Unlimited which is all very exciting.

Golfdom: Mark, thanks for all your time. Best of luck to you. **Woodward:** Absolutely, Seth. Thanks for the opportunity, and best of luck to you at *Golfdom*. ■

THE 2011 PLANT HEALTH SERIES

A SUPERINTENDENT recently told us that because he had made a fundamental change in the way he maintained his golf course, he was now able to sleep better at night.

So we try to understand this at *Golfdom*: That the health of a superintendent's turf is so important that it actually has an impact on the health of superintendents themselves. It's not so hard to fathom; when turf is stressed, so are superintendents.

And guess what? Here comes what will probably be another hot summer that will challenge turf managers across the nation.

That's why *Golfdom*, in partnership with BASF Professional Turf & Ornamentals, is bringing readers the three-part 2011 Plant Health Series. Part 1 begins right here, while parts 2 and 3 will be coming in the next two months. All three parts of the series are sponsored by BASF Professional Turf & Ornamentals.

When your turf is stressed, you're stressed. *Golfdom* and BASF want you to have better success with your course, and maybe even get a better night's sleep because of it.

Why? Because you deserve it.

The Chemical Company

Real World Science Focused for Superintendents

After more than three years of turf research Intrinsic brand fungicides from BASF delivered golf course superintendents an industry-first in 2010: fungicides labeled for disease control and plant health benefits.

Based on the proprietary active ingredient pyraclostrobin, Insignia SC Intrinsic brand fungicide and Honor Intrinsic brand fungicide from BASF provide broad spectrum control of the top diseases challenging turfgrass playability as well as plant health benefits that help turf to better withstand stresses from the inside out.

But the real benefit is below ground.

While the surface of turfgrass treated with an Intrinsic brand fungicide may not appear any different than turfgrass treated with other fungicides, including other strobilurin class fungicides, the roots and plant systems treated with Intrinsic brand fungicides show a substantial improvement in overall health.

BASF research shows pyraclostrobin primes the plant's immune system before a stress event occurs, which helps the turf endure and overcome the event through root retention. In addition, it helps the plant operate more efficiently and effectively, making the turf more able to withstand disease and environmental stresses, including drought, moisture, temperature ex-

BY THAVY STAAL

temes, as well as mechanical stress, such as aeration.

Speaking of aeration, BASF worked with superintendents across the U.S. last spring and summer to better understand the effects of Honor Intrinsic brand fungicide on turf root systems. Superintendents were asked to time the fungicide application for preventative disease control and prior to a stress event such as aeration in order to benefit from the plant health effects of Honor Intrinsic. Root cores were pulled and sent for analysis using a root scanning system called WinRHIZO. Not surprising, results paralleled that of greenhouse research — turf treated with Honor Intrinsic brand fungicide resulted in increased total root length compared to standard treatments.

BASF will be conducting more real world research this spring and summer that focuses on the effects of turf root systems from additional stress factors such as temperature extremes. Our research shows turf treated with Intrinsic brand fungicides are less sen-

sitive during drought by moderating temperature of leaves and canopy and can be visualized via infrared photo.

One can only guess what the 2011 season will bring but two things are certain: after turf breaks from its dormancy, turf stresses will follow. And when used in an integrated pest management program, Insignia SC Intrinsic and Honor Intrinsic manage disease, enable plant health and help to reduce labor costs, which all help superintendents sleep easier at night.

BASF science helps superintendents get more out of their disease control program investments. Consider incorporating an Intrinsic brand fungicide into your disease prevention and treatment program, and share your disease control and plant health results with our team.

Learn more about Intrinsic brand fungicides at www.Intrinsic-PlantHealth.com and other BASF Professional Turf & Ornamentals innovations at www.betterturf.basf.us. ■

Thavy Staal is marketing manager for BASF Professional Turf & Ornamentals.

“My root system is better than yours.”

“The secret to my good green looks? Longer roots under drought stress. Research shows that **Honor® Intrinsic™ brand fungicide** has disease control and **plant health benefits** that make me more efficient and better able to withstand stresses like extreme temperatures and aerification. So I'll keep looking good—and so will you.”

Intrinsic brand fungicides don't just fight disease; they give turf the resilience to endure stress. Find out more at IntrinsicPlantHealth.com.

The NEW Plant Health

BY SETH JONES AND BETH GERACI

Every day, superintendents are trying to get more bang for their buck.

It's a tough economy, and with gas prices soaring, any little edge they can give their courses is a valuable addition.

Enter the new plant health label.

Like seeing an extra 33 percent added to your Snickers bar for free, adding the additional benefit of plant health to a product that treats for diseases is pretty much a home run, right?

Many superintendents and researchers are on board with the added value, while some researchers remind us that though added benefits are good, superintendents still have to be mindful of what they're applying to their courses, and why, exactly, they're applying it.

Disease control and plant health

The plant health label hasn't permeated the industry yet — *Golfdom* only counts two companies, BASF and Bayer, that currently sell fungicides with plant health on the label — but the word is spreading.

Last year BASF Turf & Ornamentals launched an umbrella brand called Intrinsic for all of their products that are labeled for plant health in the turf and ornamental market. Currently two products fall under this category, Honor and Insignia SC fungicides.

This year Bayer Environmental Science also received EPA approval to add plant health to two of its fungi-
