

# New Smithco **ULTRA LITE Roller**

*With the lightest footprint in a dual roller drive system*

At 605 pounds, it's the lightest riding greens roller made with dual hydraulic roller drive for superior traction and maneuverability.

It's also the only roller with direct drive which does away with the chain maintenance required by mechanical systems.

The hydraulic operation of both 6" seamless tapered steel drums eliminates slipping on steep slopes and the damage that can be caused by single drive rollers.

Powered by a 9 HP Honda Commercial Duty engine with a tight turning radius of just over 10 feet, the ULTRA LITE delivers a whole lot yet it's the most affordable roller made by Smithco.
