

tle, if at all. Apparently that isn't the way GCSAA has it figured."

I avoided establishing eye contact with him. It bothered me, and angered me, that I was unable to give him counsel or answer his questions. Fact is, nobody in Lawrence will give any justification for their plan to squeeze some superintendents out of state chapters.

"Do any decision makers in Lawrence have any idea how many golf course superintendents are at golf courses like mine? Lots and Lots. It isn't that we don't want to join the GCSAA; I'd absolutely love to. I feel left out without belonging. Remember, it wasn't that long ago they thought I was good enough to award me a GCSAA scholarship. But the money

isn't there for me to join. And there are thousands like me."

"But I have always felt good that I could at least find a home in the state chapter, a place to be with colleagues and a group that offers so much education."

"I can't tell you how bad I feel that even the state chapter option may not be there, especially if the GCSAA president and vice president have their way. Some of us aren't going to have anywhere to go..." His voice trailed off and he looked away.

"It might be easier to swallow, easier to accept if I could only understand the 'why' of their proposal. But I cannot."

The frustration Peter feels I feel too. I don't have answers—real, honest,

straight answers—to his questions. Despite asking for them, nobody from OUR national organization will come forth.

The answers need to come soon, before bridges are burned, before relationships are severed, before feelings are hurt beyond repair. The mere fact that these things could happen calls into question the real value of strident affiliation requirements.

Since Lawrence started this, they need to explore and initiate some changes before it is too late. We cannot afford to lose guys like Peter Gunn.

It is a sad state of affairs. Someone ought to be ashamed that it has come to this, and worried that it may get worse. Maybe someone ought to take a minute and listen. ♣

Turf Seed for Every Application

Sun. Shade. Parks. Athletic fields. You name it, L. L. Olds Seed Company has top-quality turf seed just right for you. We work with more than half a dozen seed producers in the Pacific Northwest so that we always have a broad portfolio of seed available when you need it.

Have turfgrass questions? Our certified seed technologist, horticulturists, and agronomists are at your disposal. This team of turf experts accurately analyze your growing concerns and recommend seed mixtures that will grow vigorous and strong.

When speed of delivery is important, you can count on Olds Priority Shipping. Your seed is on your loading dock 24 to 48 hours after you place your order. That's fast and convenient.

If you have questions about seed availability, pricing or usage, please call us toll free at 1-800-356-7333.

puts Irrigation Control in the Palm of Your Hand.

Reinders
Irrigation Supply

Here's the Single Solution to Your Irrigation Control Problems . . .

The OSMAC Radio Paging Based System . . . consisting of:

One or more RDR radio data receiver field units attached to your existing or new pedestals and connected to your existing or new field wires. The RDR field unit allows independent scheduling of each station. And since each RDR field unit can control up to 48 stations, it is possible to replace multiple controller sites with one RDR.

A standard IBM compatible computer for easy yet precise, flexible and powerful centralized control, using the OSMAC PC Timer Software.

The Central Control Station. A small, desk-top paging encoder that includes a built in radio frequency transceiver to provide local-area signalling to the field satellites, radio paging, two-way communications or telephone interconnect.

One or more Portable Radios for remote control of valves, initiating pages, two-way communications, and telephone interconnect.

Optional pagers for signalling staff or other personnel.

An optional centralized rain gauge interface is available.

The Poly-S™ difference: a unique multiple coating system.

Each Poly-S™ particle is manufactured using a computer-controlled, two-tier coating process that allows nutrients to be released steadily and safely by controlled diffusion through the polymer coating. Thus the rate of release can be regulated over a pre-programmed period of time over a wide variety of weather conditions — providing higher nitrogen analysis than SCU products with less sensitivity to temperature than fertilizers coated with polymer only.

It is the most efficient — and cost-effective — turf fertilizer technology ever developed. For more information about Poly-S fertilizers and their performance advantages, contact your Scott Tech Rep.

R&R With Our Loved Ones

By Bruce Worzella

Now that snow has blanketed our golf courses, it seemed only fitting to share with you a little bit about the great time we had at the WGCSA dinner dance and golf outing.

Twenty-two couples embarked on a mission last October to try to wrestle the Mr. & Mrs. Mow title from Mike and Mary Drugan. The title includes a trophy that some choose to display and that some don't! No surprise—the trophy was designed by Rod Johnson some years ago, and we are continually amazed by his ingenuity!

The photos here show you that the objective is the dinner dance and golf outing is to have fun. It is a relaxing weekend that was welcomed by everyone who was there.

The weekend starts with arrivals on Friday night. Golf is the order of the day on Saturday, and in 1995 a

new putter and a new tee box spike were there to greet players. Hot chocolate was the drink of the day and when the scores were tallied, the winners were, once again, Mike and Mary Drugan with an alternate shot score of 40. Trailing by one shot were Pat and Jan Wallrich (and twenty other couples!)

Dinner and dancing made for a memorable evening, even though midnight was about as late as we went. The next morning was met with farewells until next October.

I would like to thank Bill Wimmer from Cold Water Canyon for the use of the course and for the warm lunch on Saturday. Oshkosh Country Club, the Pioneer Inn and October 5, 1996 will combine for our next weekend together. Make it a date on you calendar now! 🌱

Jeff Bottensek never "TIRES" of golf!

John Krutilla and Pat Dreschler team up for championship golf!

Circle the wagons...

Janelle Johnson putts on greens a lot faster than Rod's!

Long hitter Steve Schmidt!

Sue Gerth wishes this club had more loft!
